Values for most recent five months are estimates from BSEE's Liquid Verification System and Gas Verification System; other data come from Oil and Gas Operations Reports provided by offshore operators to the Office of Natural Resources Revenue, and are subject to monthly revision. The figures reported on this page are total production volumes removed from the ground. Sales volumes will slightly differ from production volumes for any given month/year due to lease use, re-injection, or sale during a different month. More detailed information can be found on the Regional production pages for the Gulf of Mexico, Pacific, and Alaska Regions.
