The Cabinet of Ministers reserved licensed subsoil areas on the Yamal and Gydan peninsulas

Среда, 16 марта 2016 11:13 Опубликовано в News in English (/in-english)

On the request of NOVATEK the government of Russia reserved several licensed subsoil areas on the Yamal and Gydan peninsulas for the LNG-project. This information was given by the head of the Ministry for natural resources of the Russian Federation Sergey Donskoy.

The decision was taken. These are the licensed areas, which were reserved but are not planned to allocate for use at the present time, as he explains.

According to his words, the talk is about forming of state programs and the strategic program of the Ministry for energy, which defines terms of activation of license activity on the Yamal peninsula, as it is informed on the portal neftegaz.ru.

As we should remind, in October of 2014 the government of the Russian Federation gave the right for export of liquefied natural gas to three companies of NOVATEK group -

“Arctic LNG 1, 2 and 3”. They own licenses for Geofizicheskoye field, Salmanovskoye (Utreneye) field and North-Ob licensed area. On the 19th of February of 2015 NOVATEK received a license for Trekhbugorniy area with forecasted resources more than 1 trillion cubic meters of gas for 435 million rubles. Besides, NOVATEK discovered a new field – Kharbeyskoye oil, gas, condensate field on Severo-Russkoye licensed area in Yamal-Nenets Autonomous Okrug. The terms of building of the LNG-plant on the Gydan peninsula will be defined in 2016.

At the present time NOVATEK fulfills the project “Yamal LNG” that supposes development of the South-Tambey field and building of the LNG-plant with the capacity 16 million and 500 thousand tons of LNG and 1 million tons of gas condensate per year. The South-Tambey gas condensate field with reserves in 926 milliard cubic meters is resource base. The total cost of the project makes 26 milliard and 900 million dollars. It is planned to start up the first stage of the plant in 2017.

For the end of this February readiness of the object made 45%. In the project “Yamal LNG” NOVATEK owns 60%, CNPC – 20% and Total – 20%.
