Production

Natural Gas Production

The natural gas production started In 2004, in the Temane field and in 2009 the Pande field was coupled to the system. The total amount of gas produced from 2004 until December 2013 was 1,140,675,883.15 GJ (Giga Joules), equivalent to 27.272.933.591 Nm³ (normal cubic meters) and condensate produced was 13,002,192 bbl (barrels).

The following graphs show the evolution of produced quantities of natural gas and condensate in Mozambique, through the fields of Pande and Temane respectively.

Gas royalty

The royalty is a tax on oil production that focuses on the oil produced in Mozambique, from the development and production areas.
