*HE Abdalla Salem El-Badri, OPEC Secretary General*

I would like to present to you this Annual Statistical Bulletin (ASB) on the 50<sup>th</sup> anniversary of its publication. Any publication with such longevity is clearly one that is valuable; the oil industry as a whole recognizes and appreciates the contribution of the ASB.

Data is essential to our industry and data sharing key to market stability. For the decision-makers of today and planners of tomorrow, the necessity for timely and accurate data is unquestionably important. Data influences investment and shapes development, and ensures the world's energy needs continue to be met in the best way possible.

OPEC's commitment to provide a wide range of detailed and well-researched data on the oil and gas industry is once again met in this year's publication, which has become a much-anticipated reference tool around the world. We sincerely hope that you will find this ASB both informative and useful.

As always, the central focus of the ASB is on OPEC Member Countries — Algeria, Angola, Ecuador, the Islamic Republic of Iran, Iraq, Kuwait, Libya, Nigeria, Qatar, Saudi Arabia, the United Arab Emirates and Venezuela. More specifically, the ASB includes statistics on OPEC and non-OPEC country upstream and downstream oil developments, oil trade, transportation, prices — including exports and imports, reserves, production, tanker fleets and pipelines, petroleum products and exploration.

OPEC — always realizing the importance of data — has long tried to improve and expand its collection of data over the 55 years of the Organization's history. Its commitment to data transparency and market stability is evident in its active participation in the Joint Organizations Data Initiative (JODI) since its formation and in the regular organization of Annual Statistical Meetings, at which Member Countries come together to provide valuable consultation and input, a major end result of which is this publication.

In order to make this publication as accessible as possible, it is made available in both an electronic PDF file and an interactive version on the OPEC website, which allows the full download of data for non-commercial use. Finally, I would like to thank all those involved in the creation of this document for their hard work, from the collaborative input of Member Countries to the unflagging dedication of staff at the Secretariat. It takes many people many months of commitment to make this document a reality.

Abdalla Salem El-Badri  
Secretary General

The OPEC Annual Statistical Bulletin (ASB) provides detailed and comprehensive time-series data on many different aspects of the global petroleum industry, including production, demand, imports and exports, as well as exploration, production and transportation activities.

The publication contains, in particular, key statistical data on oil and natural gas activities in each of OPEC's 12 Member Countries: Algeria, Angola, Ecuador, Islamic Republic of Iran, Iraq, Kuwait, Libya, Nigeria, Qatar, Saudi Arabia, the United Arab Emirates and Venezuela. Additionally, it provides valuable industry data for various countries with detailed classifications mainly by geographical region, and covers the major economic areas around the world.

*This year's 2015 ASB, which comprises data up to the end of 2014, includes the following important highlights:*

- ▶ In 2014, world crude oil production averaged at 73.4 million barrels/day, increasing by 0.7 per cent, over 2013. Noticeable increases originated in North America, particularly the US, as well as in Western Europe, more specifically Norway. Crude oil production declined year-on-year in Africa and the Middle East, and remained relatively flat in other regions. Crude oil production in OPEC Member Countries reached 30.7m b/d during 2014, down 2.9 per cent from 2013, year-on-year. The overall OPEC share to the world crude production total in 2014 was at 41.8 per cent, lower than in 2013, when it was 43.3 per cent. Non-OPEC oil supply and OPEC NGLs, as well as non-conventional oil production inched to 62.3m b/d, increasing by 3.9 per cent as compared to the 2013 levels.
- ▶ World oil demand averaged at 91.3m b/d in 2014, up by 1.1 per cent year-on-year, with the largest increases taking place in China, the Middle East — particularly in Saudi Arabia, Islamic Republic of Iran, Qatar and the United Arab Emirates, — and in non-OECD Asia. The 2014 oil demand in Africa and Latin America continued its upward trend, while oil demand declined for another year in Western Europe. Total OECD oil demand fell slightly during 2014, while oil demand in OPEC Member Countries increased strongly for another year by 2.9 per cent, as compared to 2013. Distillates and gasoline account for around 55 per cent of total world oil demand and are on increasing trend, while residual fuel oil requirements declined for another year.
- ▶ In 2014, the majority of crude oil from OPEC Member Countries was exported to Asian and Pacific countries (13.7m b/d or 60.4 per cent). Substantial volumes of crude oil from OPEC Member Countries were also exported to Europe (3.8m b/d or 16.7 per cent) and North America (3.1m b/d or 13.9 per cent). Asian and Pacific countries were the largest importers of OPEC Member Countries petroleum products (2.7m b/d or 60.8 per cent). North America was the region in 2014 that recorded the largest yearly increase in oil exports (0.7m b/d or 11.7 per cent) with the bulk of these volumes being petroleum products. OPEC Member Countries petroleum products exports in 2014 stood at 4.5m b/d, while during the same year the imports were at 1.6m b/d, up 1.4 per cent year-on-year.
- ▶ World proven crude oil reserves stood at 1,492.9 billion barrels at the end of 2014, 0.2 per cent higher as compared to the end of 2013. The largest non-OPEC additions originated in North America, particularly the US, as well as Asia and Pacific predominantly China and India. Proven crude oil reserves in OPEC Member Countries remained largely unchanged at the end of 2014, as compared to 2013 and reached a level of 1,206bn b. The overall OPEC percentage share of world proven crude oil reserved at the end of 2014 stood at 80.8 per cent.
- ▶ OPEC Member Countries remained important players in the natural gas market during 2014, with proven natural gas reserves of 95,129bn standard cubic metres. This marked a slight increase of 0.1 per cent from 2013, with a total world share of 47.3 per cent.
- ▶ The refinery capacity of OPEC Member Countries increased by 0.6m b/cd or 5.4 per cent during 2014 compared to 2013, with the bulk of increases originating in the Middle East. In 2014, OPEC Member Countries held 11.6 per cent of total world refinery capacity in 2014. World refinery capacity rose by 0.9m b/d in 2014. Gains in Asia Pacific, as well as North and Latin America have been partly offset by losses in Western Europe. The 2014 world refinery capacity inched to 95.7m b/cd during 2014.
- ▶ The OPEC Reference Basket averaged at \$96.29/b in 2014, down from \$105.87/b in 2013 and following a steep decline in the second half of 2014. This represented a decrease of \$9.58/b or 9.0 per cent with a volatility of \$14.56/b or, equivalently, 15.1 per cent relative to the yearly average. The minimum monthly average crude price was \$59.46/b in December 2014 and the maximum was \$107.89/b in June 2014.

**Notes:**

Conversions to the US dollar are based on average annual market exchange rates.

1. On January 1, 2008, the new Venezuelan bolivar (VEF), equivalent to 1,000 old bolivares (VEB), was introduced. In January 2010, a fixed dual exchange rate system for the bolivar was announced. The system offers a 2.6 bolivar per US dollar rate for imports of essential items such as food, medicine, and industrial machinery, and a 4.3 bolivar per US dollar rate for imports of other products, including cars and telephones.

**Notes:**

US Gulf and Singapore prices apply to cargo; Rotterdam prices apply to barge size lots. Gasoline specification in Singapore is 97 research octane number with 0.15 gram lead per litre. Fuel oil viscosity is 380 centistokes with 3.5 per cent sulphur. Gasoline specification for Rotterdam is 97–98 RON with 0.15 gram per litre lead. As of 2008 Gasoil is with 10ppm sulphur content, before gasoil is with 0.05 per cent sulphur content.

# General notes

### Definitions

**Barrels per calendar day (b/cd):** the total number of barrels processed in a refinery within 24 hours, reflecting all operational limitations, eg routine inspections, maintenance, repairs etc.

**Barrels per stream day (b/sd):** the number of barrels of input that a refining facility can process within 24 hours, operating at full capacity under optimal crude and product slate conditions.

**Completion:** the installation of permanent equipment for the production of oil or gas.

**Composite barrel:** a consumption weighted average of retail prices (including taxes) of the main groups of refined petroleum products.

**Crude oil:** a mixture of hydrocarbons that exist in a liquid phase in natural underground reservoirs and remains liquid at atmospheric pressure after passing through surface separating facilities. For statistical purposes, volumes reported as crude oil include:

- liquids technically defined as crude oil;
- small amounts of hydrocarbons that exist in the gaseous phase in natural underground reservoirs, but which are liquid at atmospheric pressure after being recovered from oil well (casing head) gas in lease separators;
- small amounts of non-hydrocarbons produced with the oil;
- very heavy and extra-heavy crude oils with viscosity less than 10,000 mPa.s (centipoises) at original reservoir conditions.

**Distillates:** middle distillate type of hydrocarbons; includes products similar to number one and number two heating oils and diesel fuels. These products are used for space heating, diesel engine fuel and electrical power generation.

**Dry hole:** a well found to be incapable of producing either oil or gas in sufficient quantities to justify completion as an oil or gas well.

**Exports of petroleum products:** includes products from gas plants and excludes bunkers.

**Gasoline:** a mixture of relatively volatile hydrocarbons, with or without small quantities of additives, that have been blended to form a fuel suitable for use in internal combustion engines; includes gasoline used in aviation.

**Geneva I agreement:** agreement of January 1972 between some OPEC Member Countries and the major international oil companies, which had the effect of establishing an index for quarterly adjustments of posted crude oil prices on the basis of the arithmetic average of the deviations of the exchange rates of nine major currencies against the US dollar. This was modified to an import-weighted index in 1978, accounting for exchange rates and inflation rate. The present 'modified Geneva I + US dollar' currency basket includes the US dollar, the Euro, the Japanese yen, the UK pound and the Swiss franc.

**Kerosene:** medium hydrocarbon distillates in the 150° to 280° C distillation range and used as a heating fuel as well as for certain types of internal combustion engines; includes jet fuel, which is a fuel of naphtha or of kerosene type, suitable for commercial or military purposes in aircraft turbine engines.

**Natural gas liquids (NGLs):** those reservoir gases liquefied at the surface in lease separators, field facilities or gas processing plants. NGLs consist of field condensates and natural gas plant products such as ethane, pentane, propane, butane and natural gasoline.

**Natural gas:** a mixture of hydrocarbon compounds and small quantities of various non-hydrocarbons existing in the gaseous phase or in solution with oil in natural underground reservoirs at reservoir conditions. The natural gas volumes refer to Standard Conditions of 60° F, 14.73 psia (15.6° C, 760 mm/Hg).

**Gross production:** the total flow of natural gas from oil and gas reservoirs of associated-dissolved and non-associated gas.

**Marketed production:** corresponds to gross production, minus the volumes of gas flared or re-injected into fields, minus the shrinkage.

**Re-injection:** the total volume of natural gas produced from oil and gas completions, processed through gas-processing plants and field facilities, and used for gas lift, gas injection and cycling operations.

**Shrinkage:** volume shrinkage due to purification and/or extraction of natural gas liquids, gas used as input to GTL plants, lease separators and plant own consumption and any other losses caused by spillage, evaporation, etc.

**Non-conventional oil:** includes synthetic crude oil from tar sands, oil shale, etc, liquids derived from coal liquefaction (CTL) and gas liquefaction (GTL), hydrogen and emulsified oils (eg Orimulsion), non-hydrocarbon compounds added to or blended with a product to modify fuel properties (octane, cetane, cold properties, etc) eg alcohols (methanol, ethanol), ethers (such as MTBE (methyl tertiary butyl ether), ETBE (ethyl tertiary butyl ether), TAME (tertiary amyl methyl ether) or esters (eg rapeseed or dimethylester, etc) and chemical compounds such as TML (tetramethyl lead) or TEL (tetraethyl lead) and detergents.

**Oil demand:** inland delivery, including refinery fuels and losses, as well as products from gas plants; including international air and marine bunkers as well as direct crude burning.

**Oil or gas well:** a well completed for the production of oil or gas from one or more zones or reservoirs.

**Oil supply:** consists of crude oil natural gas liquids and non-conventional oil production.

**OPEC Basket:** the OPEC Reference Basket (ORB) price was introduced on January 1, 1987. Up to June 15, 2005, it was the arithmetic average of seven selected crudes. These were: Saharan Blend (Algeria); Minas (Indonesia); Bonny Light (Nigeria); Arab Light (Saudi Arabia); Dubai (United Arab Emirates); Tia Juana Light (Venezuela); and Isthmus (Mexico). Mexico is not a Member of OPEC. As of June 16, 2005, the ORB is calculated as a production-weighted average of the OPEC Basket of crudes. These are: Saharan Blend (Algeria); Girassol (Angola — as of January 2007); Oriente (Ecuador — as of October 19, 2007); Iran Heavy (IR Iran); Basrah Light (Iraq); Kuwait Export (Kuwait); Es Sider (Libya); Bonny Light (Nigeria); Qatar Marine (Qatar); Arab Light (Saudi Arabia); Murban (United Arab Emirates); and Merey (Venezuela).

**Output of petroleum products:** the total amount of petroleum products produced from refinery input in a given period, excluding refinery fuels.

**Petroleum products:** products obtained from the processing of crude oil, unfinished oils, NGLs and other hydrocarbon compounds. These include aviation gasoline, motor gasoline, naphtha, kerosene, jet fuel, distillate fuel oil, residual fuel oil, liquefied petroleum gas, lubricants, paraffin wax, petroleum coke, asphalt and other products.

**Posted price:** announced price reflecting the market development of crude oil and products.

**Proven crude oil reserves:** the estimated quantities of all liquids statistically defined as crude oil. They consist of those quantities of crude oil which by analysis of geoscience and engineering data can be estimated with reasonable certainty to be commercially recoverable, from a given date forward, from known reservoirs and under defined economic conditions, operating methods and government regulations (*source: SPE — Petroleum Resources Management System*).

**Proven natural gas reserves:** are the estimated quantities of all hydrocarbons statistically defined as natural gas. They consist of those quantities of natural gas (associated and non-associated) which by analysis of geoscience and engineering data can be estimated with reasonable certainty to be commercially recoverable, from a given date forward, from known reservoirs and under defined economic conditions, operation methods and government regulations (*source: SPE — Petroleum Resources Management System*).

**Refinery capacity (charge):** the input (feed) capacity of the refinery processing facilities.

**Refinery capacity (operable):** the maximum amount of input to crude oil distillation units that can be processed in an average 24-hour period.

**Refinery throughput:** oil input to atmospheric distillation unit.

**Residual fuel oil:** fuels obtained as liquid still bottoms from the distillation of crude used alone or in blends with heavy liquids from other refinery process operations. These are used for the generation of electric power, space heating, vessel bunkering and various industrial purposes.

**Rig:** a derrick complete with engine-house and other equipment necessary for drilling oil and gas wells.

**Well (exploratory and development):** a hole drilled for the purpose of finding or producing crude oil or natural gas, or providing services related to the production of crude oil and natural gas.

## Country groupings

*(OPEC Member Countries are shown in bold.)*

**North America:** Canada, Greenland, St Pierre and Miquelon, United States.
