### Who is Hydrocarbon Finder?

Hydrocarbon (HydroCarbon) Finder Oman (HCF) was established in 2015 to acquire, explore, develop and produce oil and gas resources in Oman.

HCF screened a large number of opportunities mainly in Oman. The main criteria used to screen opportunities was; current production or near term development opportunities, the upside potential for short to medium term production growth and exploration potential to grow the production in the long term. Based on this screening HCF targeted block 7 and 15, which were subsequently acquired. The company has a professional team with a proven track record in subsurface development and efficient operations.
