ENVIRONMENT

Shell provides energy responsibly, helping the world move towards a future in which the energy we use causes minimal impact on our planet. We recognise the importance of climate change, along with our role in helping people to achieve and maintain a good quality of life.

Our world needs energy to support and improve life for a growing population. Shell provides energy in a responsible way: we aim to limit any impact on the environment and support the transition towards a lower-carbon future.

Towards a lower-carbon world

Shell has long recognised the climate challenge and the role of energy in enabling a decent quality of life. We believe that, while technological developments will emerge, effective policy and cultural change is essential to drive low-carbon business and consumer choices and opportunities.

Shell supports the establishment of government-led carbon “pricing” mechanisms that deliver a meaningful cost on CO₂ emissions, necessary to create transitions to lower-carbon power and fuel options.

Preventing spills

Oil or product spills damage the environment and endanger our employees and neighbouring communities. To avoid spills and leaks of hazardous substances, we work hard to make sure our facilities are well designed, safely operated, and appropriately inspected and maintained. We invest in the equipment and human expertise we need to

About us

Fresh water

We take steps to manage our use of water and apply new approaches and technologies to reduce our use of fresh water. We comply with water regulations wherever we operate and also set our own mandatory water standards, which match best practice for our industry.

We tailor our use of fresh water to local conditions, as water constraints tend to affect people at the local or regional level. In some cases, we use alternatives to fresh water in our operations; these include recycled water, processed sewage water and desalinated water.

[Find out more about Shell and fresh water - Opens on Shell.com](#)

Biodiversity

Our projects can affect local biodiversity and dependent communities. We apply stringent standards to help reduce any impacts our operations may have, particularly in critical habitats, which are areas that are rich in biodiversity or under protection.

We work with several conservation organisations, including Earthwatch, the International Union for Conservation of Nature, The Nature Conservancy, and Wetlands International. Our projects with biodiversity partners include working to restore natural habitats and ecosystems close to our operations.
