OBJECTIVE

Highly motivated Computer Science freshly-graduated looking to fill a full-time position upon completing my degree this December.

EDUCATION

GEORGIA STATE UNIVERSITY

BS in Computer Science | Major GPA: 3.78

Graduation date: December 2022

EMPLOYMENT

WUNDERMAN THOMPSON - Android Developer Intern

June 2022 - August 2022

- Wrote self-documenting code, easy to read, and adapted application logic for the Pokémon TV Android app using Android SDK and Android Studio.
- Completed multiple stories that involved fixing bugs, improving infrastructure code, and enhancing application performance.
- Refactored the multiple user interfaces corresponding to the entire onboarding flow from using the view system to Jetpack Compose.
- Applied the new toolkit to production-ready code, projected to optimize and accelerate UI development and testing.
- Completed courses / Google codelabs to gain a strong foundation in Kotlin, Android, and Jetpack Compose.

GEORGIA STATE UNIVERSITY - Teaching Assistant

August 2018 - Current

- Partnered with teacher and TA team to implement developmentally suitable lessons for over 100 students per class.
- Tutored students individually and in small groups to help them master coursework.
- Communicated effectively with faculty regarding student process and participated in professional development opportunities at least once per semester.
- Graded programming language assignments and exams.

SKILLS

Programming languages: Java, Kotlin, JavaScript, HTML, CSS

Frameworks & Tools: Git, MERN stack, Android Jetpack Compose.

PROJECTS

Etherity - Charity Auction web application uses Ethereum to handle online transactions.

November 2019

- Smart contract automated all bidding activities and enhanced data security and integrity.
- Built smart contracts, Web API, and front-end components interacting with web3 services.
- Tools used: Smart Contract, Solidity, Node.js, MongoDB, React.js.

Money Track - Expense Tracker iOS App used for managing personal daily expenses.

March 2022

- Simplistic user interface used standard iOS List View controls and live updates for new expenses.
- Cloud support for sharing accounts with other users.
- Tools used: Swift, Apple's CloudKit.
