Summary

My name is William J. Crandall I grew up in North Stonington, Connecticut and attended Ella Grasso Southeastern Technical High School in Groton, Connecticut until 1988 in June when I graduated. I participated in the Automotive Technician Technologies Program from which I graduated with high honors and a 4.0 grade point average in both areas of academics and shop related programs. I chose upon my father's insistence to further my career goals in Heavy Equipment and Diesel Truck Mechanics so upon graduation I flew by way of Denver, Colorado to Laramie, Wyoming to attend Wyoming Technical Institute of Technology. I lived in Wyoming for a year half of 1988 and half of 1989 in the Heavy Equipment Diesel Technician Technology Course while at the same time in my free time from studies living at my friend's ranch being taught everything about being a cowboy and pro- roper. My friend offered me at graduation the option to stay and work the ranch as a cowboy but my recently disabled father guilted me into coming back east. I came reluctantly back east with one stipulation I was not living in Connecticut I was moving to Maine where I stood a better chance of getting a heavy equipment job due to the logging industry. I moved to Lincoln, Maine and also purchased an additional 15 acres in Mattawamkeag I paid outright at eighteen for the small horse farm and began to work for a local concrete company while taking care of my father in June of 1989. The first job I held in Maine was that concrete company G.E. Goding and Sons in Lincoln I also held jobs in Maine in Winn called Winn Welding and Supply also Cyr Bus Lines of Old Town and then I worked for Cummings Concrete also of Old Town. I lived in Maine until medical issues forced me to make the hardest decision of my life to sell my property and seek my surgeon for my back in Connecticut. I lived fifteen years in Maine until my father passed away it made the decision about my back and to seek the spine specialist a must decision so I was forced to sell and move to Connecticut. I made a life changing decision in Connecticut since I could no longer function as a Heavy Equipment Mechanic I made the decision to change careers and take college courses. I decided to chase after my true passions what I really wanted back in 1988 before I decided to please my father I enrolled in Civil and Environmental Engineering courses at the local college. I enrolled at Three Rivers Community College in the Civil and Environmental Engineering programs and graduated from both programs Phi Theta Kappa I finished Civil Engineering in 2003 and Environmental Engineering in 2013. I have done water testing of waterways, lakes, rivers and streams as well as home water quality testing and report preparations and summaries. I have eight years of college Chemistry and four years of college Biology along with other useful courses to aid the environment such as Contracts and Specs and Osha Regulations courses. I currently reside in Pawcatuck, Connecticut and am newly married my wife and I are returning to Maine permanently for life and are looking for a house in southern Maine near the coast this time around to settle in and retire with good jobs to end our lives with. I would change the whole story but short and simple medical needs required my wife and I to change plans and reconsider a permanent residence in Florida. My wife and I will be running a independent life and health insurance business from home at the same time my wife and I would like to start building our 2 child family and retire preferably in Florida unless health environmental conditions will allow other United States locations. Warmer dryer climates seem to work the best at the moment but i do fancy the Rockies states for residency as well I just love the mountain views.

Experience

Licensed Insurance Agent

Isfappaloosa Enterprises LLC

Jul 2021 - Present (1 year 3 months +)

Life, Health and Annuities Variables Contracts
insurance sales

Civil and Environmental Engineer

Isfappaloosa Enterprises Inc
