Safe Sleep Practices for Caregivers: Reduce the Risk of SUID

Providing high quality sleep environments and understanding Sudden Unexpected Infant Deaths (SUID) are an essential part of a child care provider's job. There are about 4,000 sudden and unexpected deaths (SUID) in the United States each year. More than half of these deaths are caused by a commonly know type of SUID called SIDS or Sudden Infant Death Syndrome. This course focuses on defining SUID and identifying behaviors that affect and reduce the risk of sleep-related SUID.
