EDUCATION

Georgia State University, Atlanta, Georgia
Computer Science

Enrolled: Aug 2023 — Expected: Dec 2027
Overall GPA: 3.97 — Major GPA 3.97

EXPERIENCE

Springer Capital, Parker Financial
Software Engineer Intern

Chicago, Illinois
Dec 2023 - Present

- Developed Microsoft Power Automate workflows to streamline operational processes.
- Created custom Python modules for Suite CRM, enhancing its functionality and meeting specific business needs.
- Administered and customized Suite CRM instances, ensuring data integrity and a seamless user experience.
- Contributed to Microsoft 365 and Azure Directory projects, implementing secure authentication and authorization solutions.

Indian Racing Bazaar
Web Development Intern

Nagpur, India
Dec 2022 – May 2023

- Optimized website performance by implementing caching techniques.
- Tested and debugged code for compatibility across multiple browsers.
- Collaborated with other developers to enhance the user experience of websites.

Georgia State University, Undergraduate Admissions
Student Assistant

Atlanta, Georgia
August 2023 – Present

- Developed and maintained accurate records of student data, including grades and attendance.
- Updated departmental websites with relevant information about upcoming events or changes in policy.
- Tracked student progress throughout the semester by monitoring attendance records and academic performance.

PROJECTS

BlankPlace - HackAtl

Atlanta, Georgia
November 2023

Project Link: <https://blankplace.netlify.app/>

- Developed and implemented "BlankPlace," an AI chatbot designed to provide personalized graffiti cleaning solutions based on user-provided images and text descriptions.
- Leveraged various technologies, including API integration, JavaScript, HTML, CSS, and Node.js, to create a seamless and interactive user experience.
- Integrated image and text input processing capabilities, allowing users to describe graffiti-related issues and submit images for the chatbot to analyze.
- Utilized Node.js for server-side logic and API interactions, ensuring real-time responses and dynamic content updates within the chatbot interface.

EchoStride - CodeDay 2023
November 2023

Atlanta, Georgia

- Engineered a voice-controlled robot that responds to verbal commands, providing a hands-free and intuitive user interface.
- Implemented voice recognition technology to interpret spoken commands, enabling the robot to perform various movements and tasks based on user instructions.
- Integrated hardware components with software systems, utilizing technologies such as microcontrollers or microprocessors to translate voice commands into actionable movements for the robot.

Authenticator Tool

- Implemented secure authentication and authorization functionalities using Azure Directory and Microsoft 365 services.
- Developed a custom authentication module using Python within the Suite CRM framework, ensuring seamless integration with Microsoft technologies for unified user authentication.
- Integrated Git for version control, facilitating collaborative development and ensuring the integrity of the authentication system's codebase.

SKILLS

- **Programming Languages:** Python, JavaScript, C/C++, Html, CSS
- **Software:** Microsoft Power Automate, Python, Suite CRM, Git, Microsoft 365, Azure Directory, API integration, JavaScript, HTML, CSS, Node.js.
