Samacheer Books is important for preparing TNPSC exams. You don't have to study all the portions of the textbooks. Get a printout from the TNPSC group exam course and prepare only the portions available in the curriculum. Take notes to help you review. பனிரெண்டாம் வருப்புசமச்சீர் தமிழ் பாட புத்தகங்களை கீழே கொடுக்கப்பட்டுள்ள விங்கை பயன்படுத்தி பதிவிறக்கம் செய்து கொள்ளலாம். இதில் மூன்று பருவங்களுக்கு பாடப்புத்தகங்கள் கொடுக்கப்பட்டுள்ளது. New TN Samacheer Book 12th Std Zoology Athiyaman Group provides free Tamil nadu Samacheer Kalvi Book pdf. Applicants can download TN Samacheer Old and New PDF Books for all categories from 6th Std to 12th std. Textbooks are one of the most important study material for each student. Tamilnadu board Class 12 Zoology manual plays a vital role in preparing for their Class 12 board examination. It is important for a student to have a thorough knowledge of the contents of the Zoology book if they want to perform well in their exams. Class 12 Zoology manual allows students to explore a specific topic, according to the Tamilnadu Class 12 Zoology Curriculum. Tamilnadu's Class 12 Zoology board manual will help students gain a full understanding of a topic that will help them remember its contents for a long time to come without much effort. The zoology manual is used by students not only to study a concept, but also to review for exams. Most of the questions were devised by the subjects and lessons learned from these manuals. We also provide the English and Tamil edition of samacheer kalvi 12th books on zoology according to the latest curriculum here: Download Samacheer Kalvi 12th Zoology Books -2019 Curriculum students can also download the previous version of Tamilnadu Board Class 3 12 Zoology Chapter Wise book from the table listed below: Benefits of studying Class 12 Zoology manual before board exams Serves as a guide for students , while the preparation for their Class 12 exam board contains the structure of the course in a systematic way along with the signs of gravity and the duration of time. It makes learning simpler along with examples and diagrams for students to easily understand. It explains the most complex topics in a simple way, making them easier for students to understand. An image of a page from a zoology book written by Dr Ramesh Gupta is massively viral on social media. Several users have shared it claiming that the book speaks a treatment for COVID-19. #WHO you have not gone through the book of the 12th model written by Dr Ramesh Ramesh Gupta where it has been reported for coronavirus so this is not a recent disease and reported treatment too... who else is confused here #JantaCurfewMarch22 #pmoindia #NarendraModi #coronavirus , reads a tweet from a Sunita Pradhan.#WHO you have not gone through the book of the 12th standard written by Dr Ramesh Chand Gupta, where it has been mentioned for coronavirus so this is not a recent disease and mentioned the treatment too ... who else is confused here #JantaCurfewMarch22 #pmoindia #NarendraModi #coronavirus pic.twitter.com/MWABH2uskX- Sunita Pradhan (@SunitaP22163768) March 22, 2020 The same claim has also been promoted in Hindi - Brother, the treatment for coronavirus was found with many difficulties after his search for it in many books ... the drug is mentioned in the intermediate zoology book... and this is not a new disease. माझ्या कापी किताबी में दूखने के बाद बड़ी मुश्किल से कोरोना वायरस की दवा मिली है... दवा इंटरमीडिएट की जन्तु विज्ञान की किताब में दी गई है... और यह कोई नई बीमारी नहीं है...) The book mentions coronavirus in the section common cold. He says there are several types of common colds, 75% of which are caused by rhinovirus or coronavirus. In the end, the extract lists the drugs that can be used to treat the infection – aspirin, antihistamines and nasal sprays. According to Jantu's intermediate book-science, written by Dr. Ramesh Gupta. The drug of #CoronaVirus was mentioned on page 1072. We can help effective people with this. Doctors are urged to analyze the drug and advise. The drugs are aspirin, antihistamine & nasal spray. pic.twitter.com/kBhG444kf- Kapil Khatter (@102_khatter) March 22, 2020CLAIM:1. The new coronavirus (nCoV) or COVID-19 is not a new disease.2. The cure for the disease has already been found.3. Coronavirus can be treated with aspirin, antihistamines and nasal spray. VERDICT: FalseFACT-CHECK: All three allegations made on social media are false.1 The new coronavirus (nCoV) is a new strain of coronavirus. The new coronavirus is a new strain of the coronavirus family. It has unique features and has never been discovered before. This #coronavirus not SARS, it is not MERS & it is not flu. It's a unique virus with unique features. Both #COVID19 & flu cause respiratory diseases and spread in the same way through small droplets of fluid from the nose and mouth of someone who is sick. -@DrTedros- World Health Organization (WHO) (@WHO) March 3, 2020 Health authorities say nCoV is likely to come from a seafood market in Wuhan, where wildlife was also illegally marketed. Chinese researchers said virus could have spread from an infected animal species to humans through illegally trafficked pangolins, which are prized in Asia for food and medicine. Scientists have identified either bats or snakes as the source of the virus, the report adds. The novel coronavirus is a new variety of coronavirus. The World Health Organization (WHO) says, Coronaviruses (CoV) is a large family of viruses that cause diseases ranging from the common cold to more serious diseases such as an MERS-CoV and SARS-CoV. A new coronavirus (nCoV) and outbreak of COVID-19 have not previously been identified in humans. Her symptoms include fever, fatigue and dry cough. In the most severe cases it causes shortness of breath, aches and pains, sore throat or in rare cases – diarrhea, nausea or runny nose. According to the Centers for Disease Control and Prevention (CDC), human crowns were first detected in the mid-1960s. Sometimes coronaviruses that infect animals can evolve and make people sick and become a new human coronavirus. Three recent examples of this are 2019-nCoV, SARS-CoV and MERS-CoV. SARS-CoV is a severe acute respiratory syndrome identified in 2002. It is believed to be an animal virus from a as-yet-uncertain reservoir of animals, perhaps bats, that spread to other animals (civet cats) and the first infected people in southern China's Guangdong Province in 2002, per WHO. Middle Eastern Respiratory Syndrome (MERS-CoV) is a viral respiratory disease caused by a coronavirus first detected in Saudi Arabia in 2012. Therefore, while different strains of coronavirus have been discovered before, the new coronavirus also known as nCoV or SARS-CoV-2 is new.2. There is no cure for the new coronavirus yet. There is no vaccine and there is no specific antibiotic medicine to prevent or treat COVID-2019, the WHO says. In fact, no vaccine has been found even for SARS-CoV and MERS-CoV.It usually takes 10 to 15 years to develop a new vaccine, however, technological progress has accelerated the process. Recently, U.S. President Donald Trump touted Chloroquine and Hydroxychloroquine as possible treatments for coronavirus after which the U.S. Food and Drug Administration (FDA) approved clinical trials of chloroquine. However, an Arizona man with nCoV died in an apparent attempt to self-medication with chloroquine. His wife is in critical condition. According to a Forbes Tracker, several pharmaceutical companies, universities and biotech start-ups are investigating treatment and treatments for the disease. All drugs are either in the early stages or animal and human testing.3. Coronavirus cannot be cured with aspirin, antihistamines and nasal sprays. When any of the coronavirus (or rhinoviruses for that matter) causes the common cold, the goal of doctors is (a) to stop the transmission of the infection to other people and (b) cure cure Symptoms. This is because the common cold is a self-contained disease – it heals on its own. It is for this reason, antibiotics or antibiotics are not given for a common cold. In the usual clinical picture, it is also not necessary to determine which organism has caused the common cold, since it has nothing to do with its treatment. The pillar of symptomatic treatment for the common cold are anti-inflammatory drugs such as NSAIDs (aspirin is one of them), antihistamines, anticholinergic drugs and decongestants (which can be given as nasal sprays). All this can be purchased in pharmaceutical stores without a prescription. However, when coronaviruses such as SARS, MERS and the new coronavirus (COVID-19) cause serious illness with manifestations such as pneumonia, acute respiratory distress syndrome, septic shock, treatment involves intensive care rather than over-the-counter medications. Therefore, it is inappropriate to pre-expose treatment to the common cold, such as the treatment of all coronavirus infections. The manual itself mentions inaccurate and inappropriate treatment. Nasal spray only involves the route through which the drug is administered - through the nose. There are many drugs given through the nasal tract, decongestants for the common cold are just one of them. CONCLUSION An excerpt from a zoology book covering the basics of the common cold was taken out of context. The claims are based on the misconception that there is only one coronavirus and that coronavirus only causes the common cold. In fact, there are many coronaviruses that infect different animals. Of these, from the mid-1960s to the present day, seven coronaviruses have been shown to infect people, including SARS,

MERS and the novel COVID-19. These infections cause a wide range of diseases from the common cold to acute respiratory distress syndrome. Therefore, these viral tweets are misleading people about the treatment available for coronavirus and fuel conspiracy theories that the current coronavirus pandemic is not new. Note: The number of positive cases of new coronavirus in India has exceeded 600. This has forced the government to impose a complete restriction on traffic in addition to essential services. Globally, more than 4 lakh confirmed cases and over 19,000 deaths have been reported. There is a growing sense of panic among citizens, causing them to fall for a variety of online misinformation - misleading images and videos inducing fear or medical misinformation promoting pseudoscience and invalid treatments. While your intentions may be pure, the spread especially during a global pandemic, can take lives.
