GM 2025 2WD 1500 6” Mono Leaf Rr Lift Kit

Thank you for choosing Rough Country for your suspension needs.

Rough Country recommends a certified technician install this system. In addition to these instructions, professional knowledge of disassemble/reassembly procedures as well as post installation checks must be known. Attempts to install this system without this knowledge and expertise may jeopardize the integrity and/or operating safety of the vehicle.

Please read instructions before beginning installation. Check the kit hardware against the parts list on the rear cover of these instructions. Be sure you have all needed parts and know where they go. Also please review tools needed list and make sure you have needed tools.

PRODUCT USE INFORMATION

⚠WARNING As a general rule, the taller a vehicle is, the easier it will roll. Seat belts and shoulder harnesses should be worn at all times. Avoid situations where a side rollover may occur. Generally, braking performance and capability are decreased when larger/heavier tires and wheels are used. Take this into consideration while driving. Do not add, alter, or fabricate any factory or after-market parts to increase vehicle height over the intended height of the Rough Country product purchased. Mixing component brands is not recommended.

Rough Country makes no claims regarding lifting devices and excludes any and all implied claims. We will not be responsible for any product that is altered. If question exist we will be happy to answer any questions concerning the design, function, and correct use of our products.

⚠NOTICE The electric power steering must be unplugged before any of the steering components are removed. Failure to do so may cause damage to the electric power steering.

⚠NOTICE Trucks equipped with a mass damper on the front diff, the damper will have to be removed.

This kit is packaged as a leveling kit—raising the front 6” and the back 5.5”. If you desire a different look or if the vehicle has a tool box or added weight in the rear, please consult with your sales representative about other block and u-bolt options.

This suspension system was developed using a 35” x 12.5” tire with 20” x 9” wheel and a offset of –12mm or –6mm offset with a 1/4” wheel spacer. 20x10 wheels require –24mm offset or –18mm offset with a 1/4” wheel spacer. **Max backspacing of 4.5”.** If wider tires are used trimming may be required.

⚠NOTICE **Fits crew cab short bed models only. Will <u>not</u> fit models with Adaptive Ride Control.**

⚠NOTICE **DEALER AND VEHICLE OWNER**

Any vehicle equipped with any Rough Country product should have a “Warning to Driver” decal installed on the inside of the windshield or on the vehicle’s dash. The decal should act as a constant reminder for whoever is operating the vehicle.

Tools Needed:

Floor Jack /Jack Stands
10mm socket /wrench
13 mm socket/wrench
15mm socket / wrench
17mm socket/wrench
18mm socket /wrench
21mm socket /wrench
22mm socket /wrench
24mm socket /wrench
27mm socket /wrench
36mm socket
1/2” socket/wrench
9/16” socket /wrench
3/4” socket/wrench
#30 Torx bit
Reciprocating Saw
Hammer
Locking Pliers

Torque Specs:

Size	Grade 5	Grade 8	Size	Class 8.8	Class 10.9
5/16”	15 ft/lbs	20ft/lbs	6MM	5ft/lbs	9ft/lbs
3/8”	30 ft/lbs	35ft/lbs	8MM	18ft/lbs	23ft/lbs
7/16”	45 ft/lbs	60ft/lbs	10MM	32ft/lbs	45ft/lbs
1/2”	65 ft/lbs	90ft/lbs	12MM	55ft/lbs	75ft/lbs
9/16”	95 ft/lbs	130ft/lbs	14MM	85ft/lbs	120ft/lbs
5/8”	135ft/lbs	175ft/lbs	16MM	130ft/lbs	165ft/lbs
3/4”	185ft/lbs	280ft/lbs	18MM	170ft/lbs	240ft/lbs

217BAG6– (*2020 Models)* *Frt Brake Line Bracket Bag*
- 1/4” x 3/4” Bolts-2
- 1/4” Nylock Nuts-2
- Frt Dr Brake Line Relo Bracket-1
- Frt Pass Brake Line Relo Bracket-3

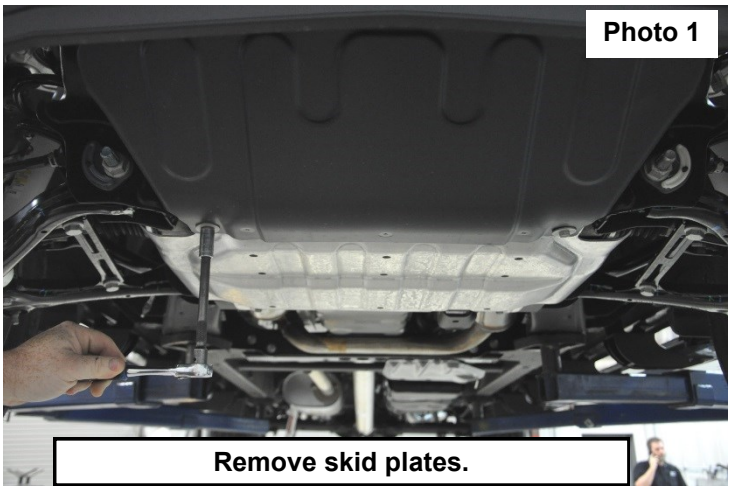
23800BAG1– Driveshaft Spacer Bag
- 12mm x 1.75 x 70mm - 4
- 12mm Flat Washer Zinc - 4

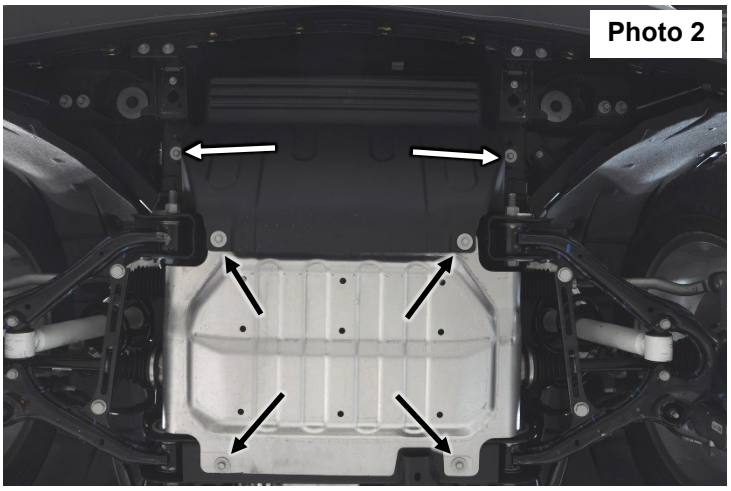
111530 GMC Mono Leaf

111630 Chevy Mono Leaf

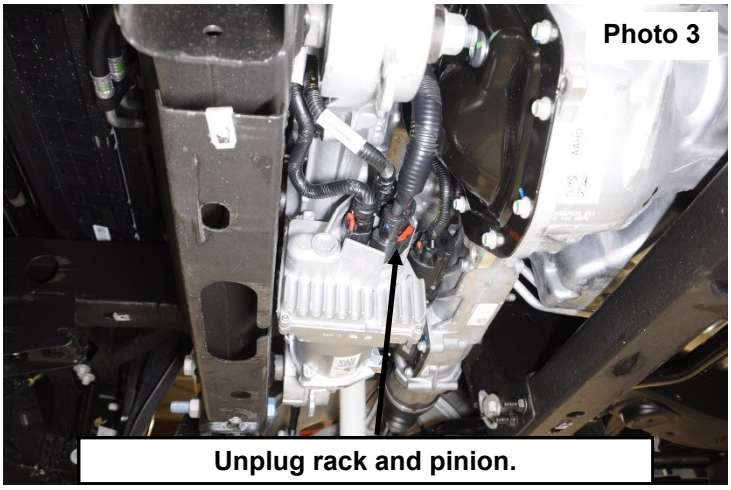
FRONT INSTALLATION

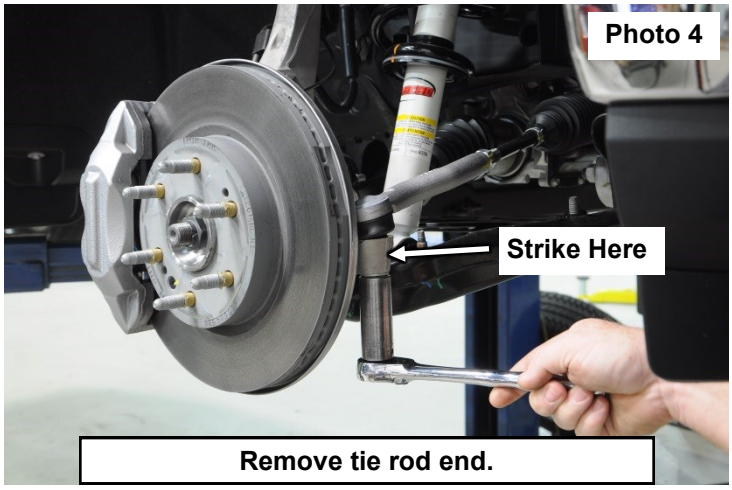
1. Park the vehicle on a level surface and chock the rear wheels. Lock the steering wheel in the straight position.
2. Jack up the front of the vehicle. Place jack stands under the frame rails and lower onto jack stands letting the front suspension hang.
3. Raise the hood and disconnect the battery using a 10mm socket.
4. Remove the tires and wheels.
5. Remove the 6 bolts holding the factory skid plates, using a 13mm socket. **See Photos 1 & 2.**



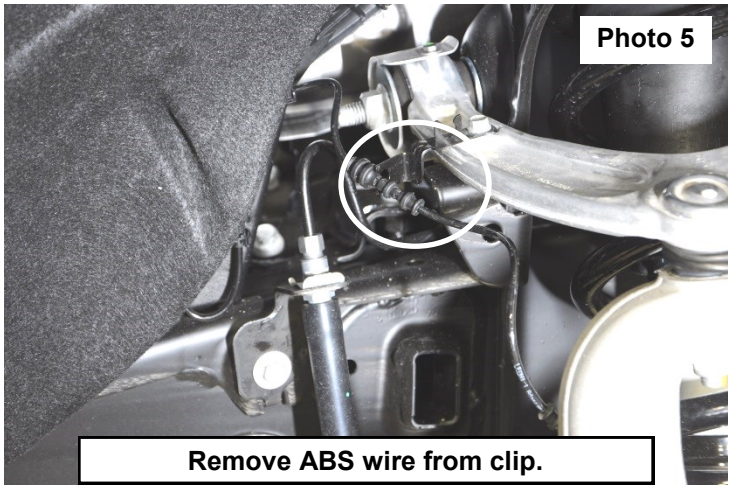


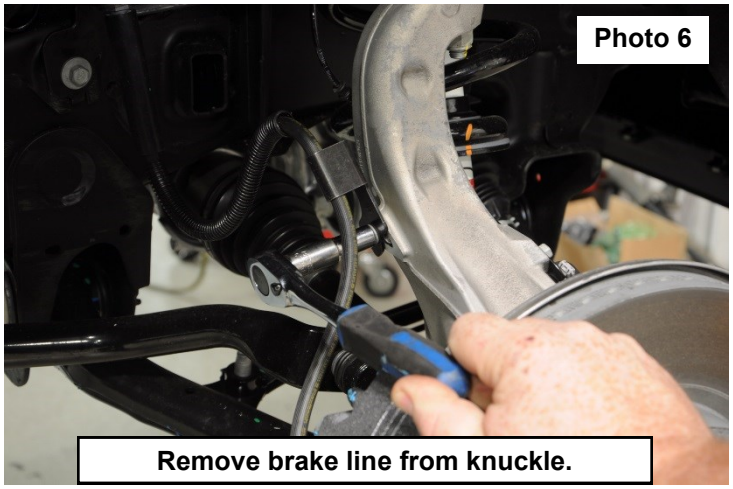
6. Unplug the three connectors going to the rack and pinion. **See Photo 3**.
7. Using a 21mm socket, remove the tie-rod nut as shown in **Photo 4**. Using a hammer, strike the front of the mount to dislodge the tie rod end. Remove from the knuckle.



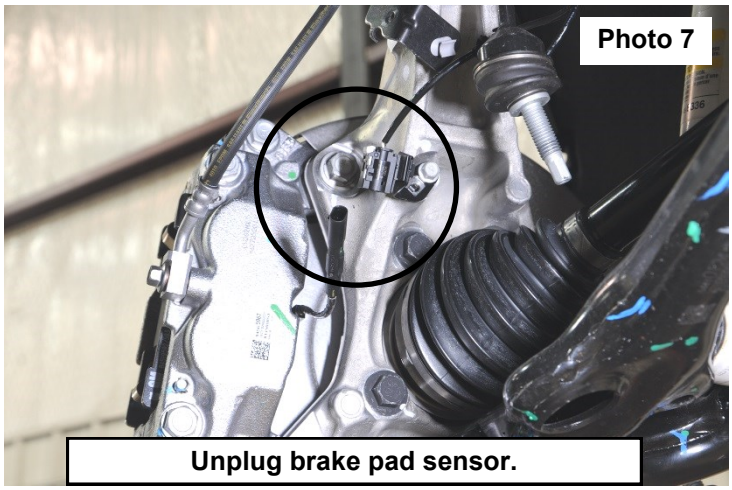


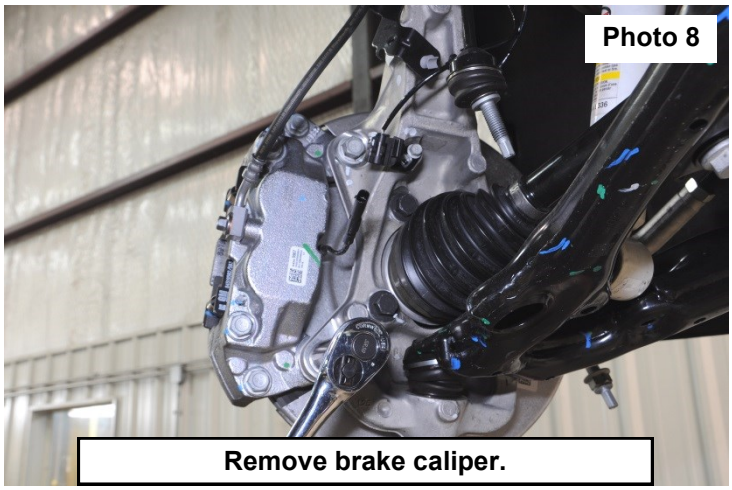
8. Remove the ABS wire from the clip on the upper control arm mount. **See Photo 5.**
9. Using a 10mm socket, remove the brake line and brake pad sensor wires from the knuckle. Retain hardware. **See Photo 6.**



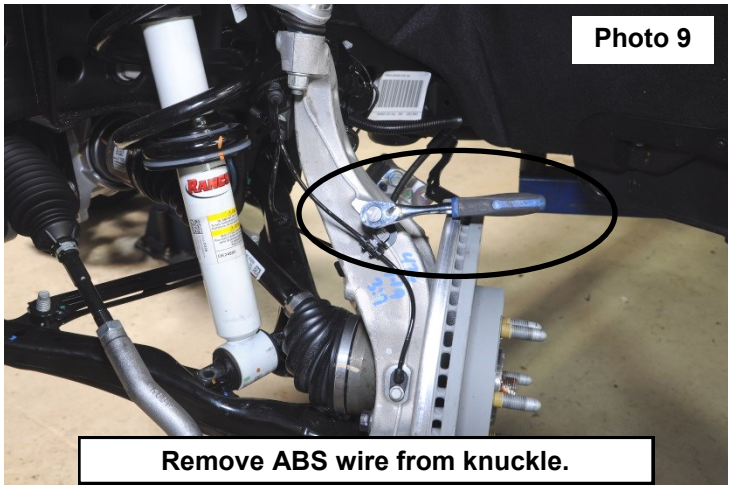


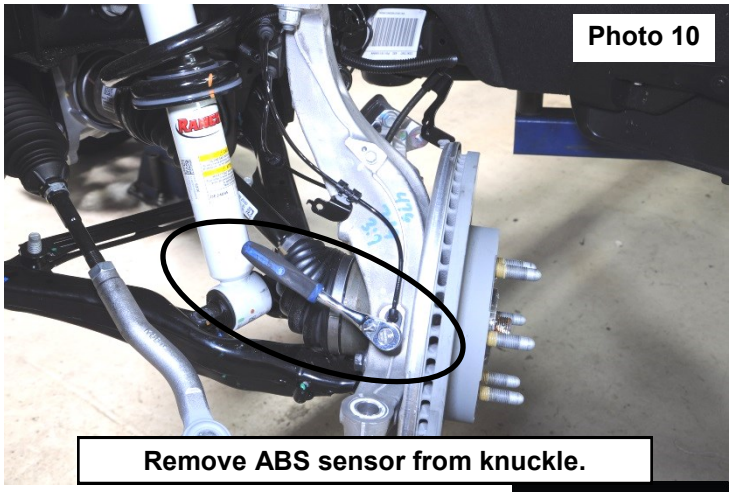
10. Unplug the brake pad sensor wire. **See Photo 7.**
11. Using an 18mm socket, remove the brake caliper. Hang caliper out of the way. **Do not hang the caliper by the brake line**. Retain hardware. **See Photo 8.**



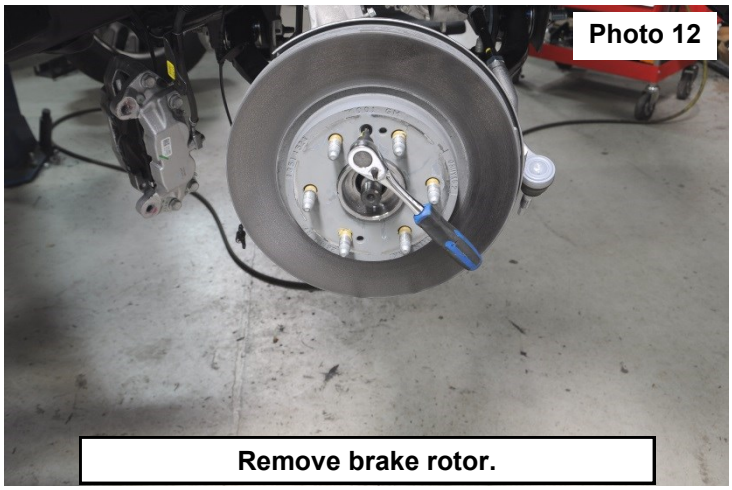


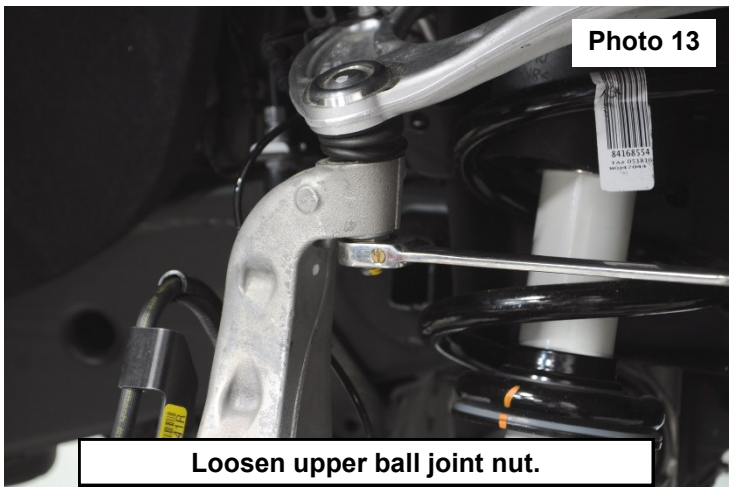
12. Using a 10mm socket, remove the ABS wire bracket from the knuckle. Retain hardware. **See Photo 9.**
13. Using a 10mm socket, remove the ABS sensor from the knuckle. Retain hardware and hang ABS wire out of the way. **See Photo 10.**



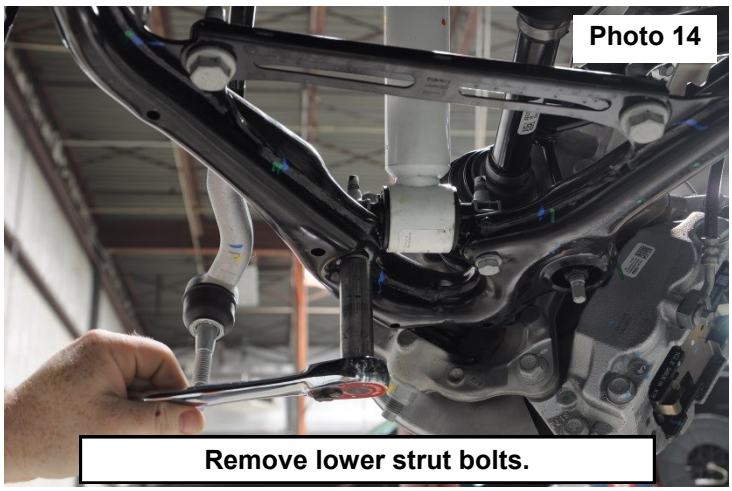


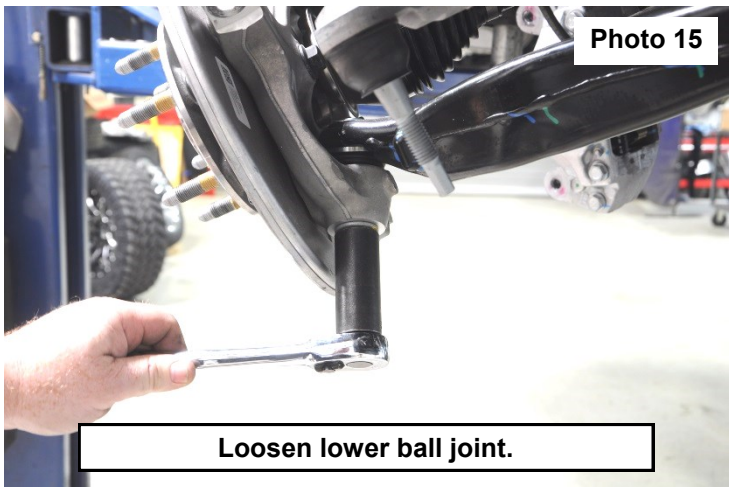
14. Using a 30T torx, remove the brake rotor. Retain hardware. **See Photo 12.**
15. Using an 18mm wrench, loosen the upper ball joint nut. Do not completely remove the nut. Strike the knuckle with a hammer to release the ball joint taper. **See Photo 13.**



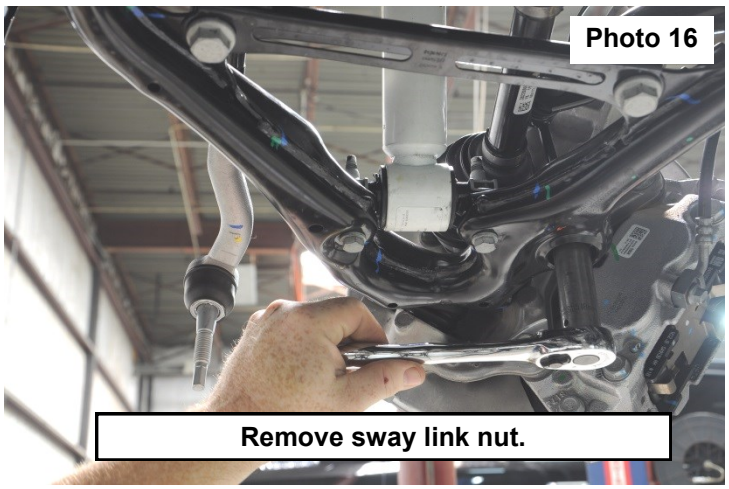


16. Support the lower control arm.
17. Using a 15mm socket, remove the lower strut mounting bolts. **See Photo 14.**
18. Using a 24mm socket, loosen the lower ball joint nut. Do not completely remove the nut. Strike the knuckle with a hammer to release the ball joint taper, remove the upper and lower ball joint nuts and remove the knuckle from the truck. Retain hardware. **See Photo 15.**

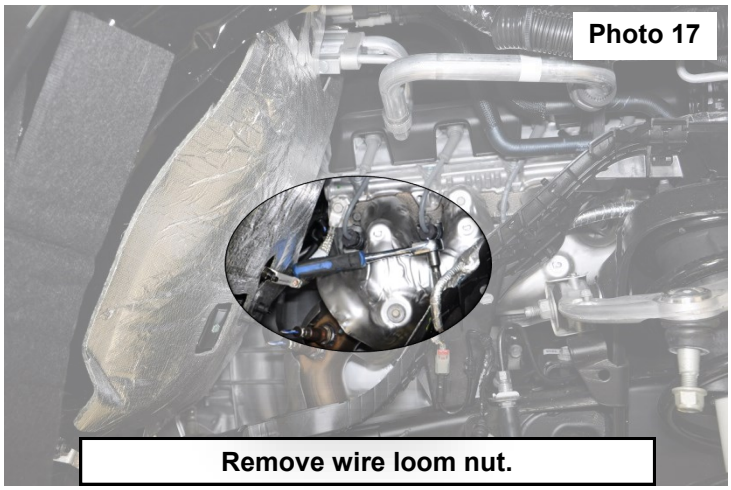


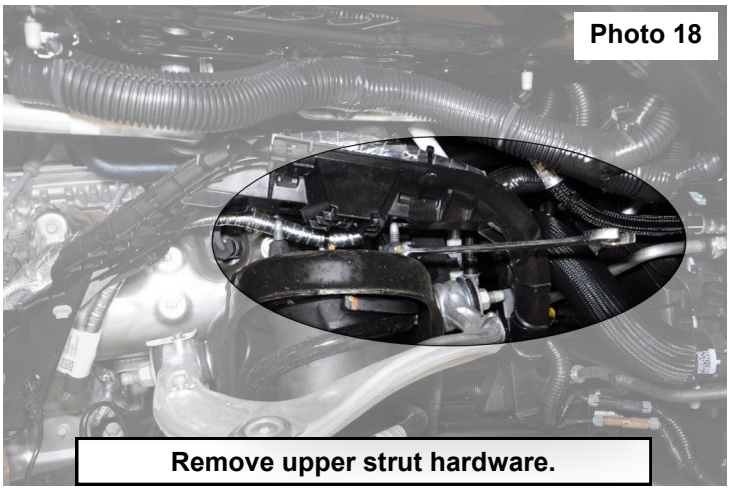


19. Remove the lower sway link nut using an 18mm socket. Retain hardware. **See Photo 16.**

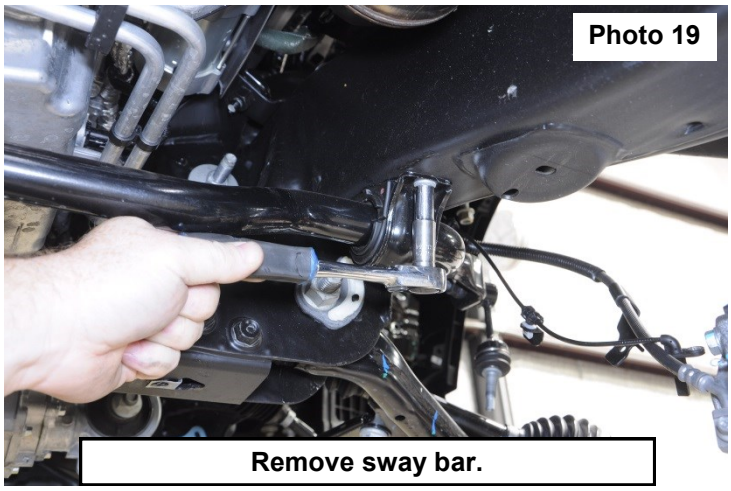


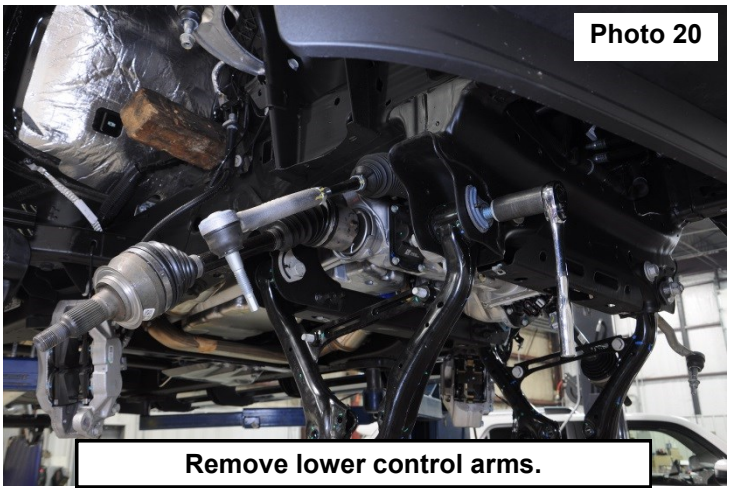
21. On the passenger side, use a 13mm socket to remove the bolt holding the plastic wire loom that is attached to the frame and the upper strut tower. Retain hardware. (Inner fender was removed for pictures) **See Photo 17.**
22. Using an 18mm wrench, remove the upper strut nuts. Retain hardware. **See Photo 18.**



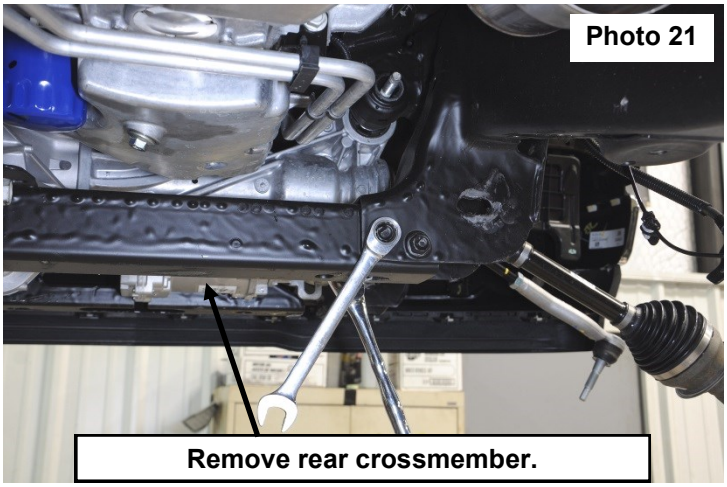


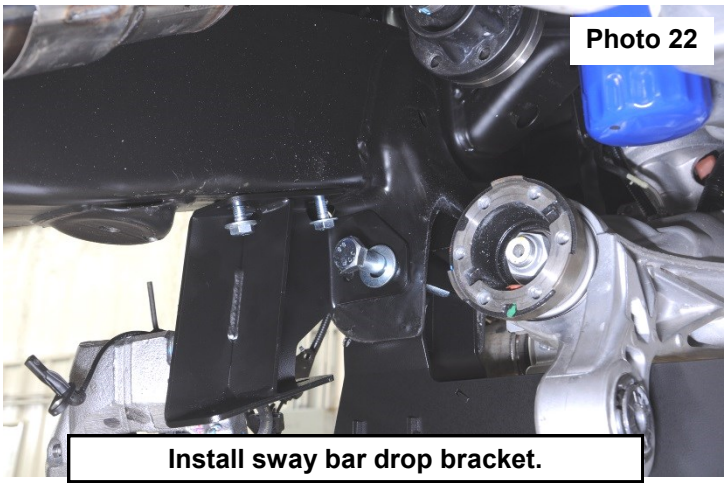
23. Using a 10mm socket, remove the sway bar from the frame. Retain hardware. **See Photo 19.**
24. Using a 27mm socket, remove the lower control arms. Retain hardware. **See Photo 20.**



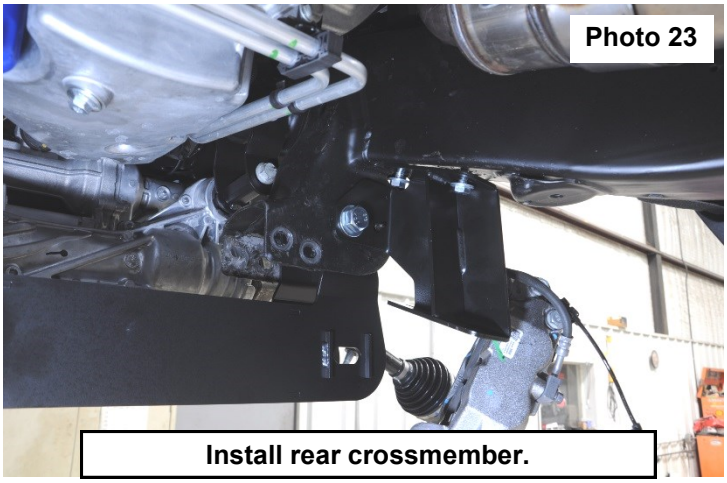


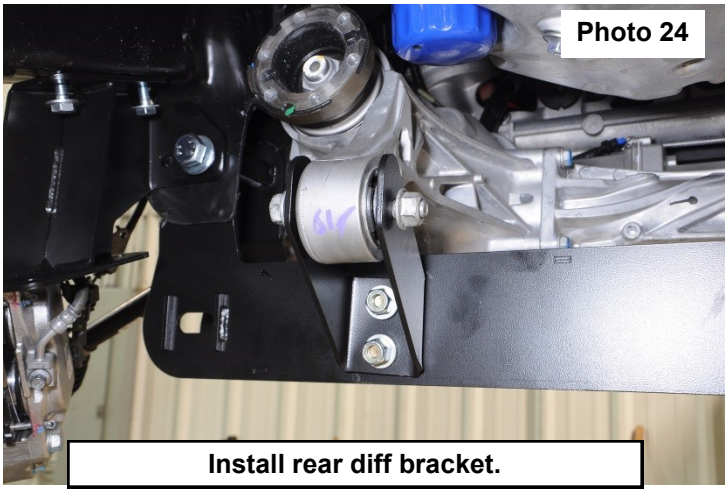
25. Remove the rear crossmember using an 18mm wrench and socket. **See Photo 21.**
26. Install the supplied sway bar drops using the factory hardware. Do not tighten at this time. **See Photo 22.**



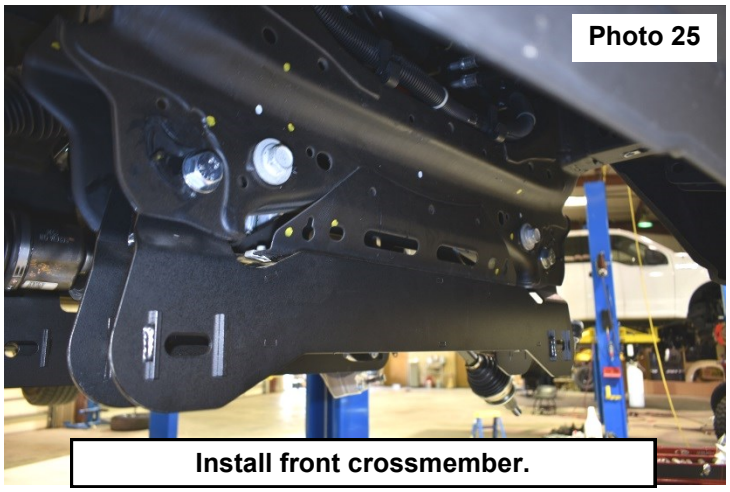


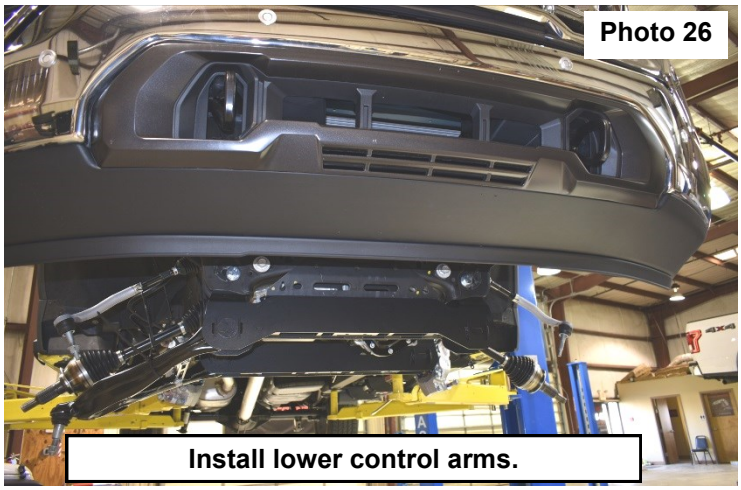
27. Install the supplied rear crossmember using the supplied 18mm x 140mm bolts, washers, and 18mm nylock nuts (1253BAG2). The bolts will go through the sway bar drop brackets. Do not tighten. **See Photo 23.**
28. Install the supplied rear diff mount onto the rear crossmember using the supplied 1/2" x 1.25" bolts, flat washers, and nylock nuts (217BAG2). Install the factory hardware through the diff and diff mount. Do not tighten at this time. **See Photo 24.**



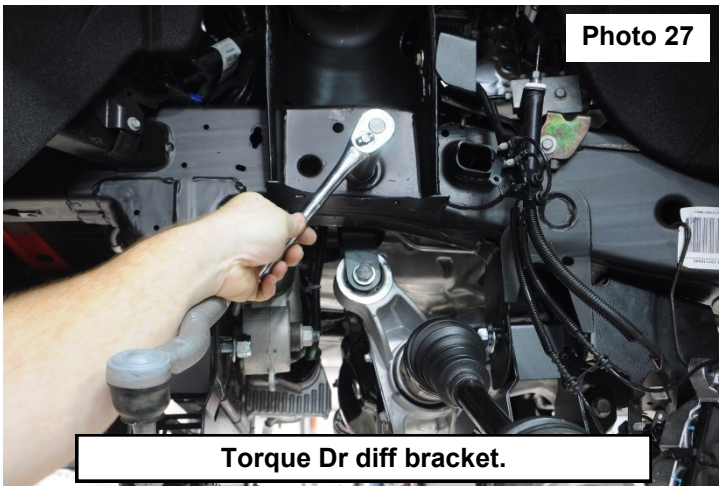


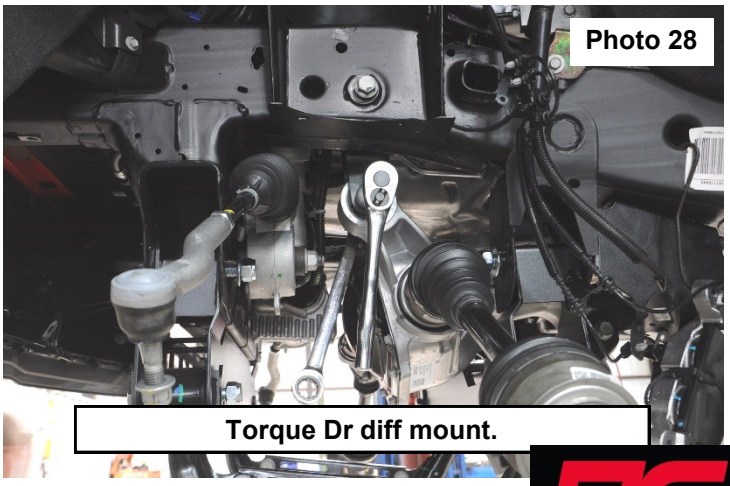
29. Install the supplied front crossmember using the supplied 18mm x 120mm bolts, flat washers, and nylock nuts (1253BAG2). Do not tighten at this time. **See Photo 25.**
30. Install the lower control arms using the supplied cam bolts and hardware (94004486BAG1). Do not tighten at this time. **See Photo 26.**



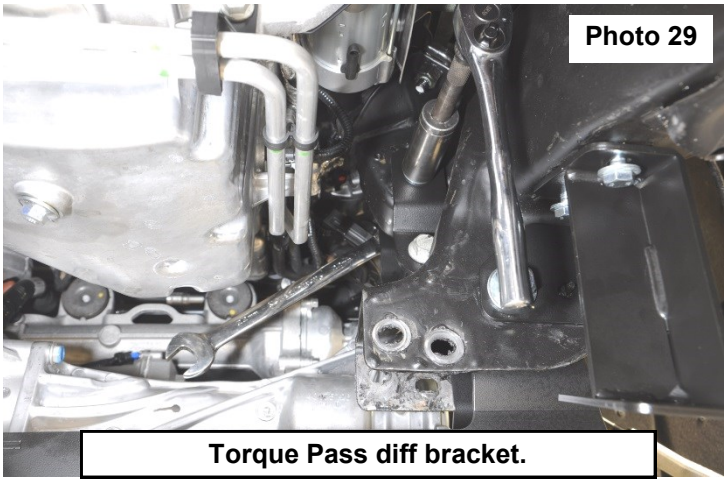


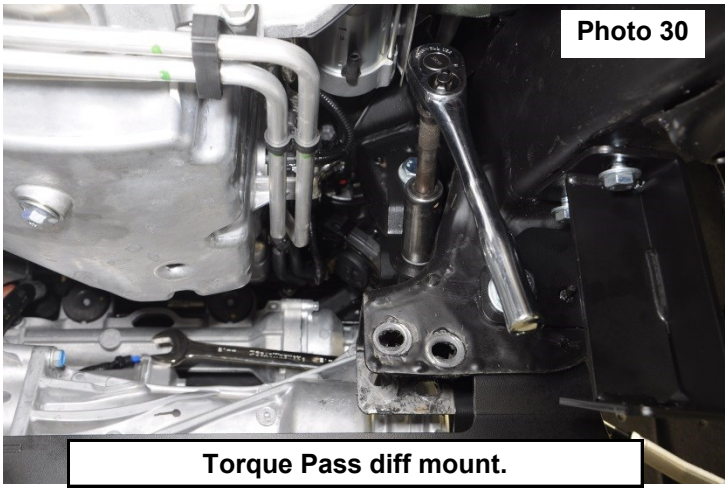
31. Using a 21mm socket and 22mm wrench, torque the upper driver diff mount bolt to 120ft/lbs. **See Photo 27.**
32. Using a 21mm wrench and 22mm socket, torque the dr diff bolt to 85ft/lbs. **See Photo 28.**



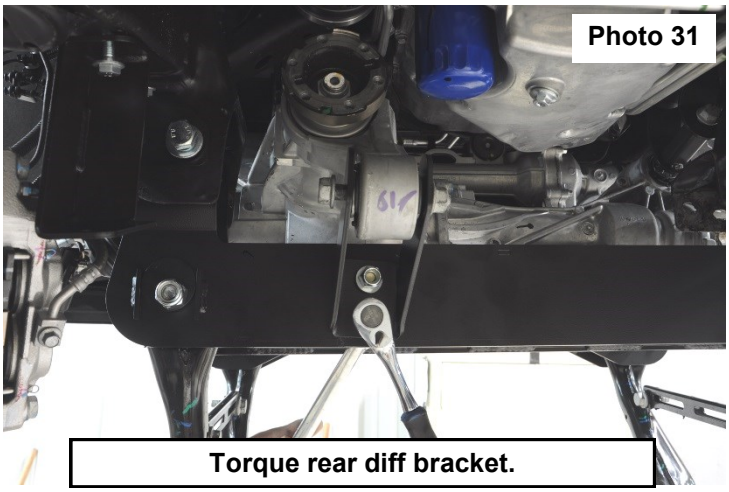


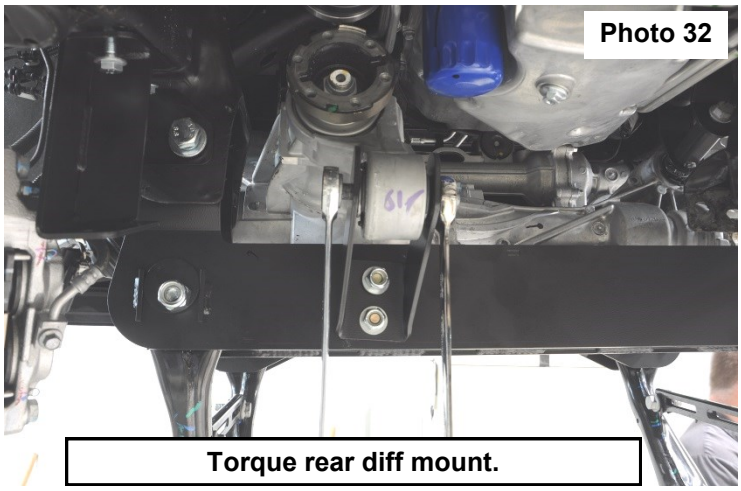
33. Using a 21mm wrench and 22mm socket, torque the pass diff drop bolt to 85ft/lbs. **See Photo 29.**
34. Using a 21mm wrench and 22mm socket, torque the pass diff bolt to 85ft/lbs. **See Photo 30.**



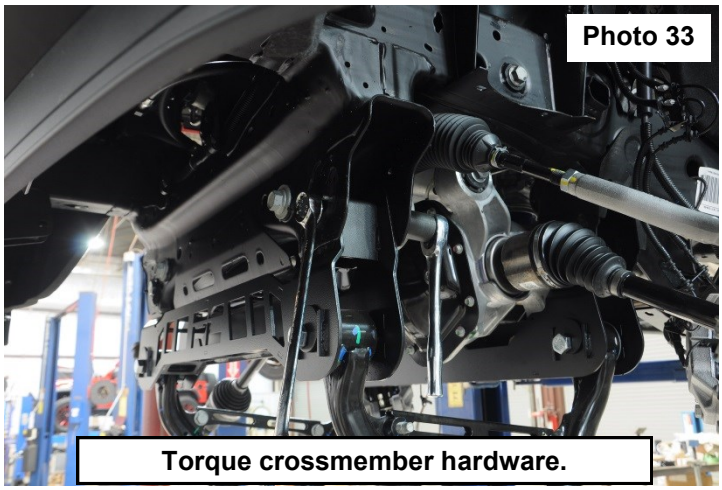


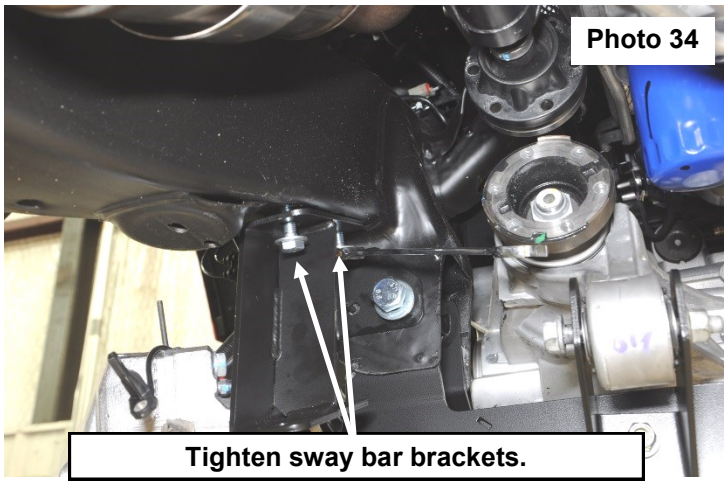
35. Using a 3/4” wrench and socket, torque the rear diff bracket hardware to 65ft/lbs. **See Photo 31.**
36. Using a 21mm wrench and 22mm socket, torque the rear diff bolt to 126ft/lbs. **See Photo 32.**





37. Using a 27mm wrench and socket, torque the crossmember bolts to 170ft/lbs. **See Photo 33.**
38. Using a 10mm wrench, tighten the sway bar drop hardware. Torque to 35ft/lbs. **See Photo 34.**





39. Install the sway bar on the drop brackets using the supplied 10mm x 35mm bolts, washers, and nylock nuts (217BAG2). Torque to 32ft/lbs using a 17mm wrench and socket. **See Photo 35.**
40. **If installing N3 struts or Vertex coilovers, refer to installation instructions included with those items and skip to step 65.**
41. Place the strut into a strut compressor. Make sure to locate or mark the position of the lower barpin. Compress the spring to remove tension from the strut top plate. Remove the center nut with a 15mm socket. Retain factory nut. **See Photo 36.**

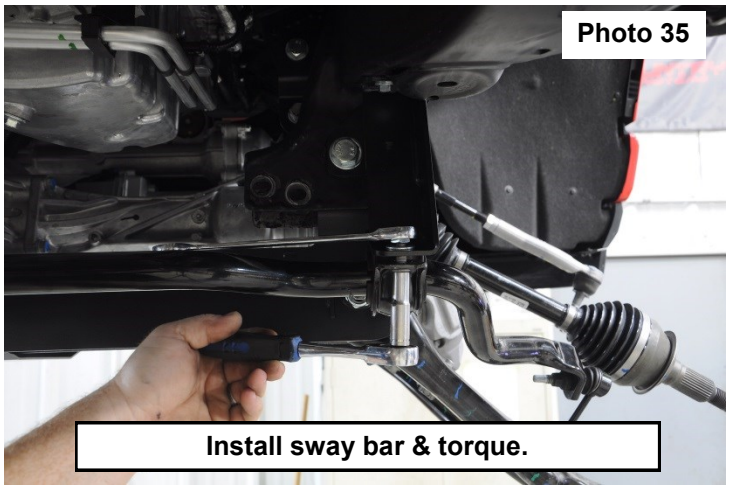


Photo 35
Install sway bar & torque.

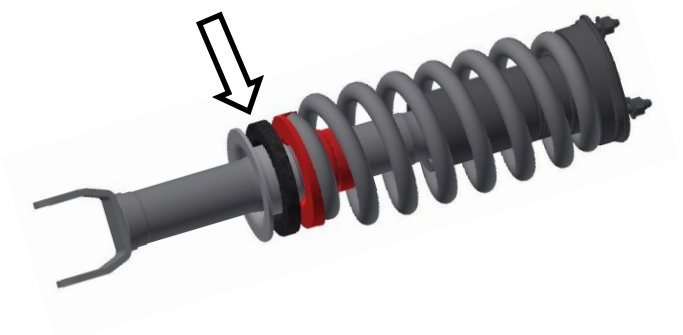
Photo 36
Remove the nut from the upper strut.

42. Remove the strut from the bottom of the assembly as shown in **Photo 37.**
43. Remove the factory lower coil spring isolator from the OEM strut. **See Photo 38.** Save for reuse.

Photo 37
Remove the strut from the coil spring.

Photo 38
Remove the isolator.

44. Install the strut pre-load spacer onto the strut, **chamfer down**. Then, place the isolator onto the strut. **See Photo 39.**
45. Slide the strut up through the bottom of the factory coil spring and hand tighten the factory nut. Make sure the barpin is located in the same position by lining up the marks made on the strut. **See Photo 40.**



Chamfer down.
Photo 39
Install the strut pre-load spacer onto the strut.

Photo 40
Install the strut in the factory spring.

46. Using a 15mm socket tighten the center nut on the strut plate. Torque to 33-35 ft-lbs. **See Photo 41.**
47. Install the supplied 10mm studs (10mmstudbag-2) into the strut spacer using the supplied 1/2" jam nut (10mmstudbag-2) between the spacer and the 10mm nut (10mmstudbag-2). Tighten the 10mm nut using a 17mm socket, pulling the stud into the spacer. **Do not using an impact. See Photos 42 & 43.**

Photo 41

Install the nut on the top of the strut.

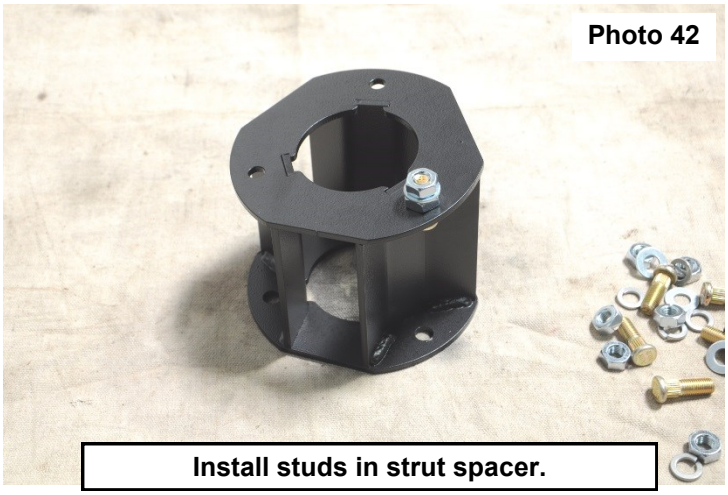


Photo 42

Install studs in strut spacer.

48. Install the strut spacer **(Chevy 6" and GMC models Only: D for driver side and P for passenger side, to the outside of the vehicle**) and the supplied strut cover on the factory strut using the factory hardware. Tighten using an 18mm wrench. **See Photo 44.**

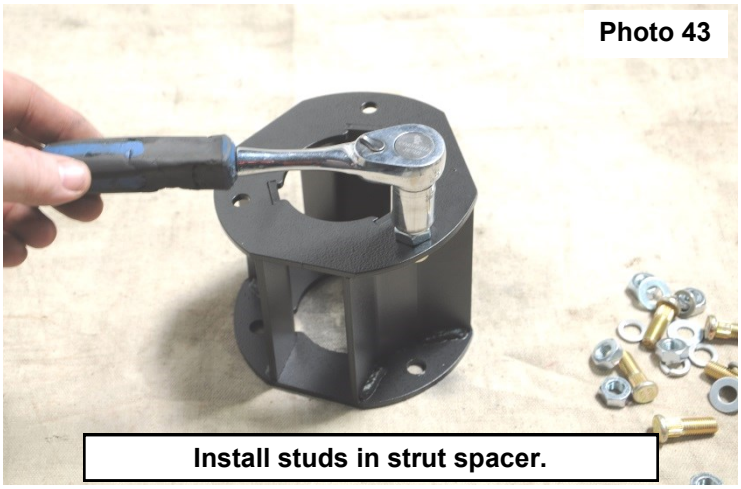

Photo 43

Install studs in strut spacer.

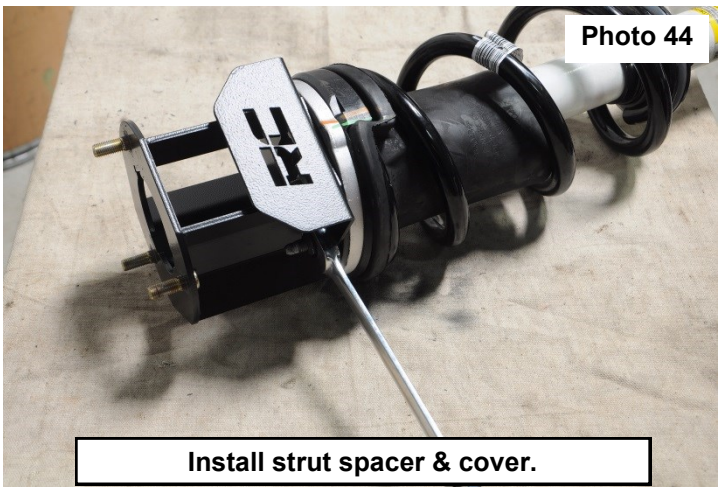

Photo 44

Install strut spacer & cover.

49. Install the strut into the upper mount using the supplied 10mm hardware (10mmstudbag-2). Tighten using a 17mm wrench. **See Photo 45.**
50. **Chevy 6" kits Only**: Refer to 92130700C instructions in 21700991 for lower strut spacer install. Torque to 32ft/lbs using a 17mm wrench and socket. **See Photo 46.**
NOTE: You may have to push the lower control arm down to install the spacers.

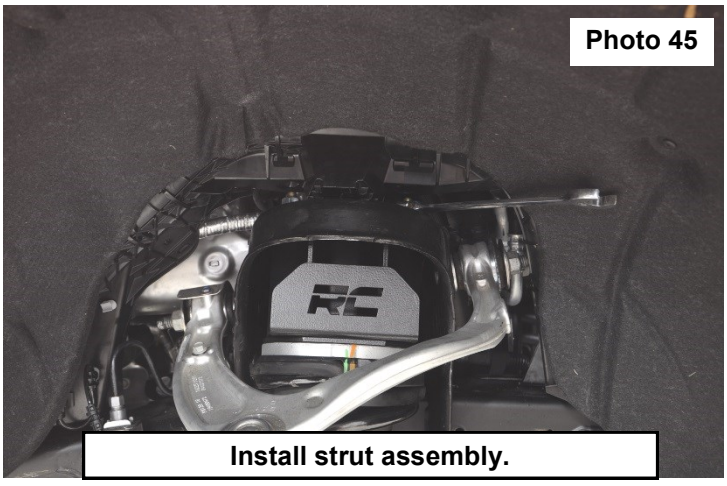

Photo 45

Install strut assembly.

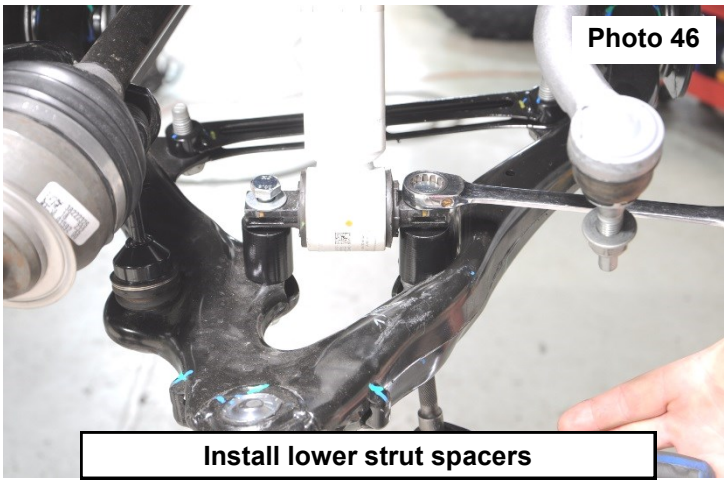

Photo 46

Install lower strut spacers

51. Install the plastic wiring loom using the factory hardware, tighten using a 13mm socket.
52. Using an 18mm socket, remove the hub bearing from the factory knuckle. **See Photos 47 & 48.**

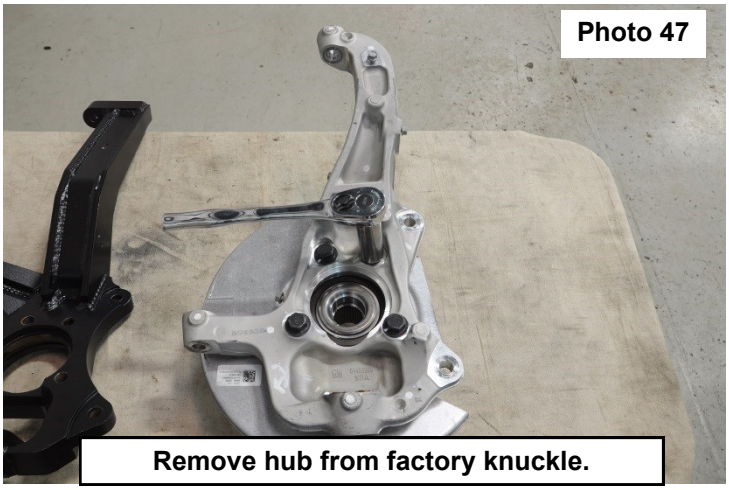

Photo 47
Remove hub from factory knuckle.

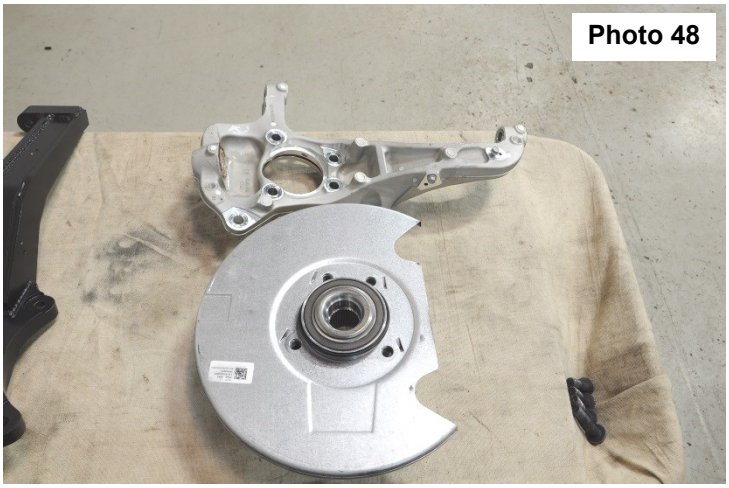

Photo 48

53. Carefully remove the hub bearing O-ring from the factory knuckle. Inspect and replace if damaged. **See Photo 49.**
54. Carefully, install the O-ring in the supplied lifted knuckle. **See Photo 50.**

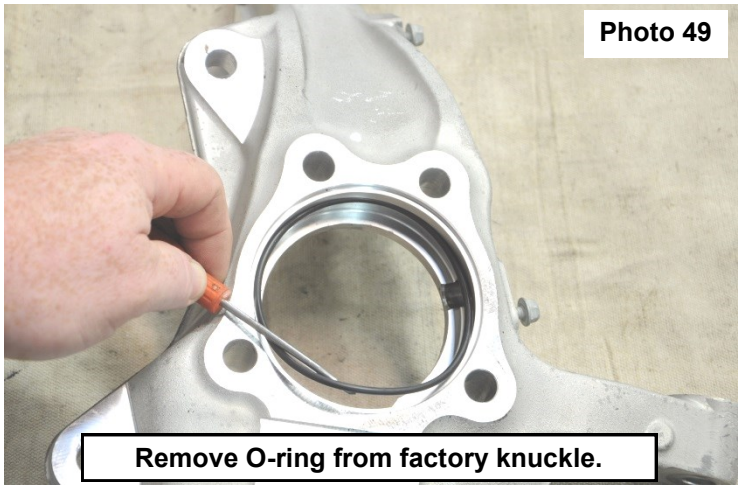

Photo 49
Remove O-ring from factory knuckle.

Photo 50
Install O-ring in supplied knuckle.

55. Install the hub bearing in the new knuckle using the factory hardware. Torque to 126ft/lbs using an 18mm socket. **See Photo 51**
56. Install the knuckle assembly on the lower ball joint, using factory hardware, while installing the CV axle through the hub bearing. Torque using a 24mm socket to 40ft/lbs + 90°. **See Photo 52.**

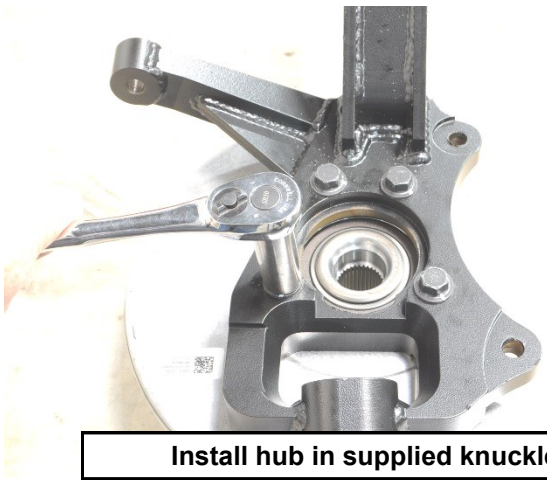

Photo 51
Install hub in supplied knuckle.

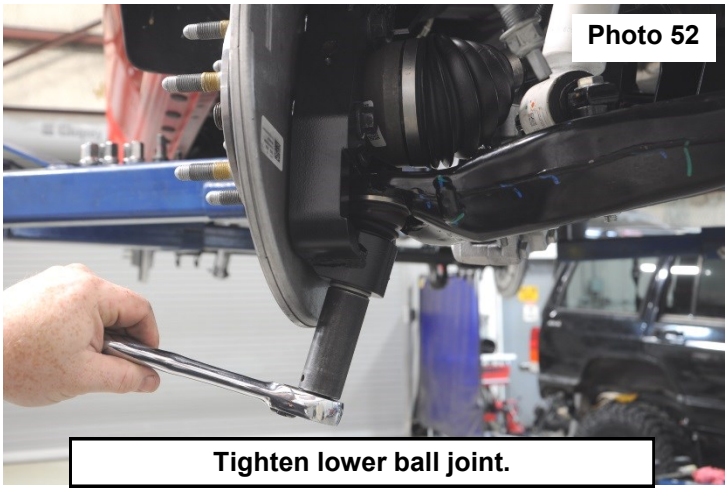

Photo 52
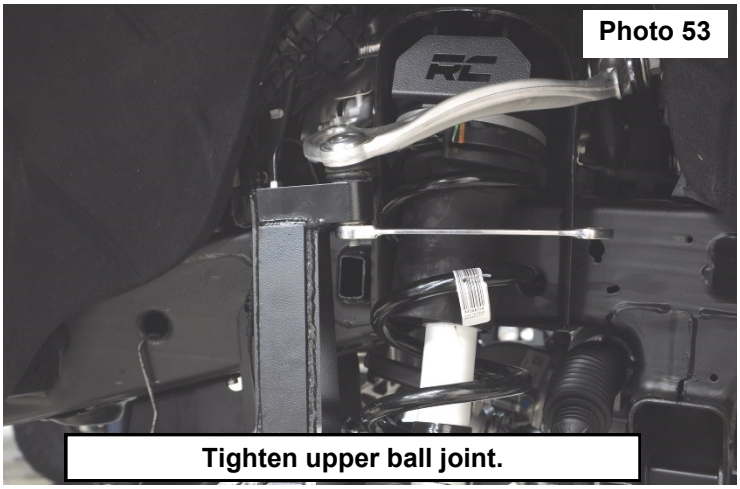
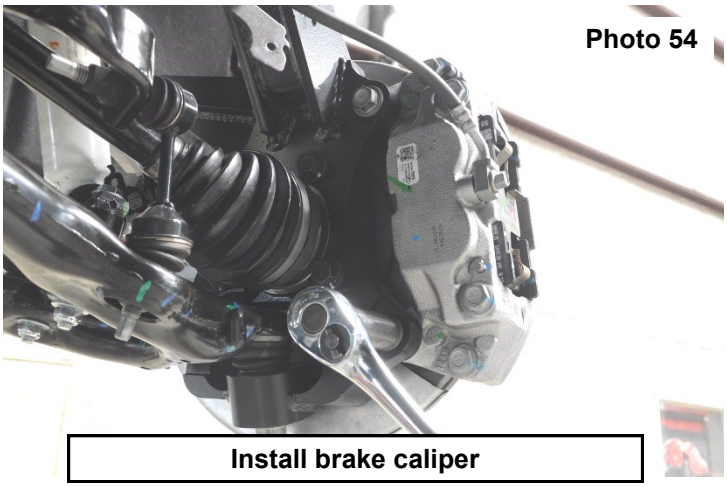
Tighten lower ball joint.

57. Attach the upper ball joint using the factory hardware. Torque to 40ft/lbs + 90° using an 18mm wrench. **See Photo 53.**
58. Attach the sway link to the lower control arm using the factory hardware. Torque to 45ft/lbs using an 18mm socket.
59. Install the rotor using the factory hardware, tighten using a T30 torx.
60. Install the brake caliper using the factory hardware. Plug in brake pad wear sensor. Torque to 130ft/lbs using an 18mm socket. **See Photo 54.**

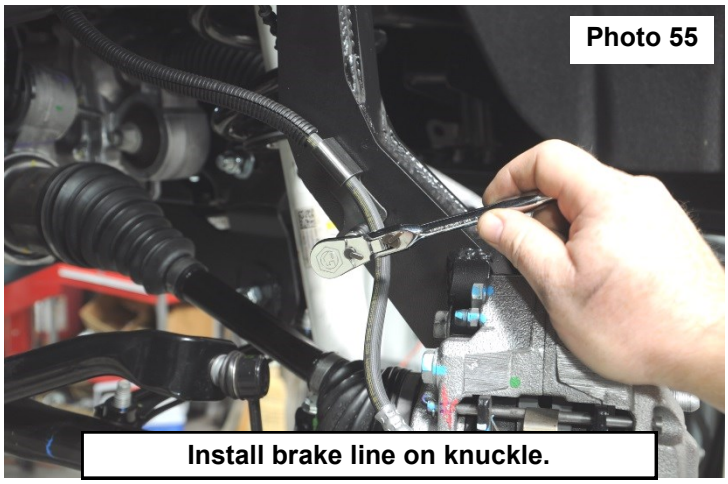


Tighten upper ball joint.

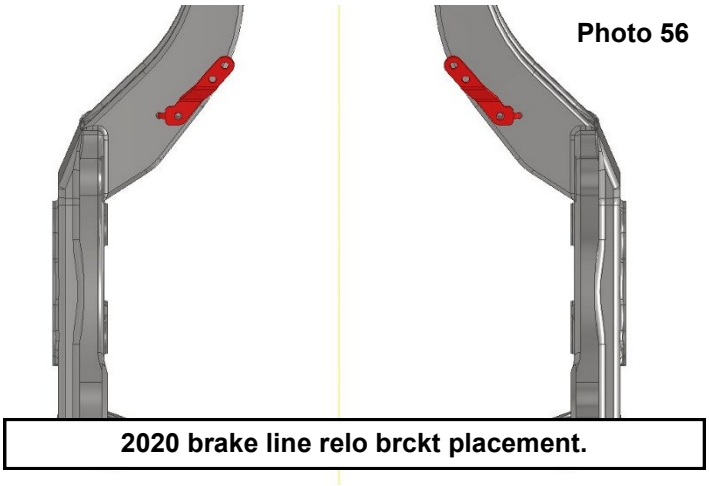


Install brake caliper

61. **2020 Models skip to next step.** Attach brake line to the knuckle using the factory hardware. Tighten using a 10mm socket. **See Photo 55.**
62. **2019 Models skip to next step.** Install the supplied brake line relocation brackets (217BAG6) on to the knuckle using the factory hardware. Tighten using a 10mm socket. Attach the factory brake line bracket to the new supplied bracket using the supplied 1/4" x 3/4" bolt and nut (217BAG6). Tighten using a 7/16" socket and wrench. **See Photos 56 & 57.**

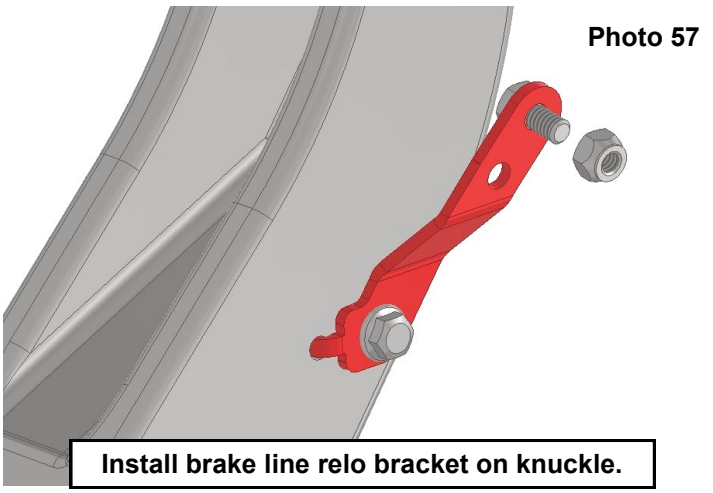


Install brake line on knuckle.

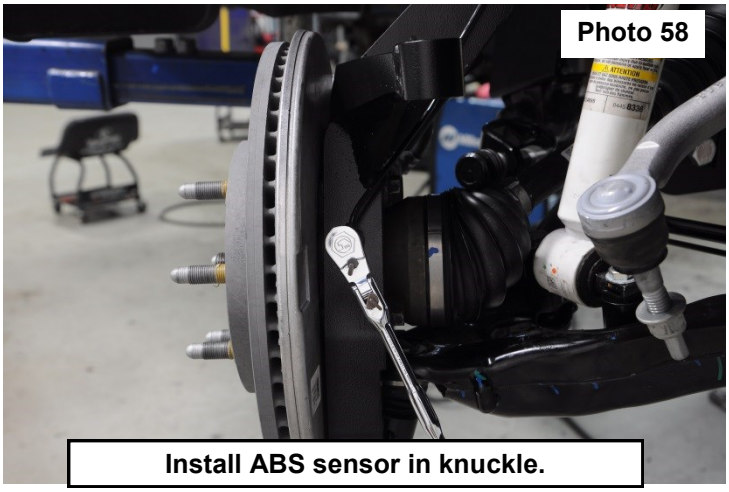


2020 brake line relo brckt placement.

63. Attach the ABS sensor to the knuckle using the factory hardware. Tighten using a 10mm socket. **See Photo 58.**

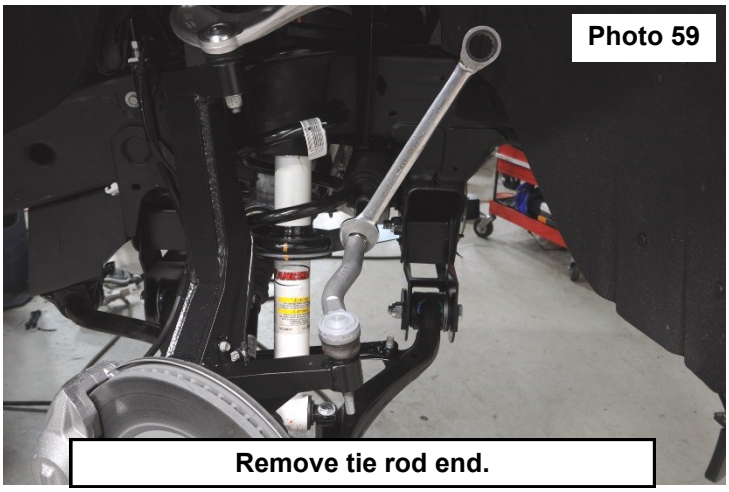


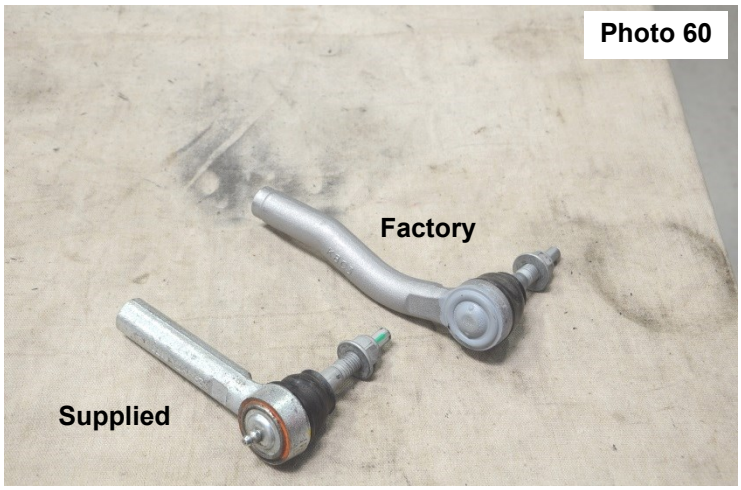
Install brake line relo bracket on knuckle.



Install ABS sensor in knuckle.

64. Place the tie rod end into the knuckle to hold it, using a 24mm wrench, remove the tie rod end. **See Photo 59.**
65. **Photo 60** shows the factory tie rod end and the new supplied tie rod end.





66. Install the supplied tie rod end using the supplied hardware. Torque to 32ft/lbs using a 21mm and 10mm wrenches. Tighten the jam nut using a 24mm wrench. **See Photo 61.**
67. Repeat steps 65-82 on the opposite side of the vehicle.
68. Reconnect the plugs to the rack and pinion and the differential actuator. **See Photo 62. 2wd models will not have the differential plug.**

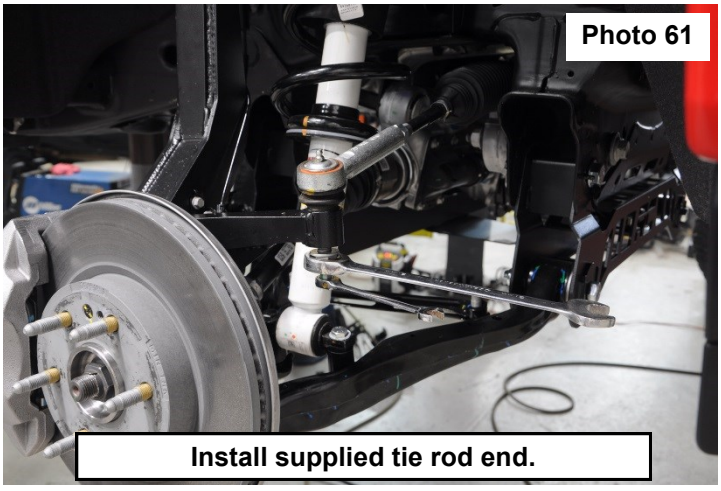


Photo 62

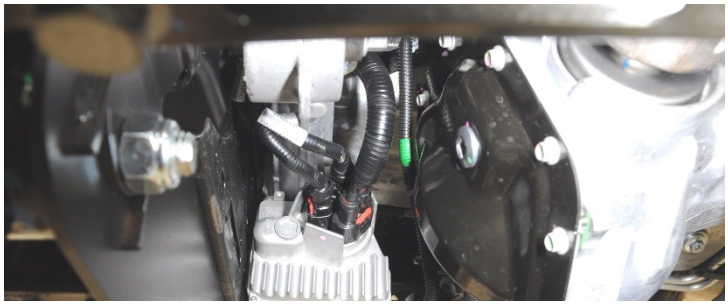
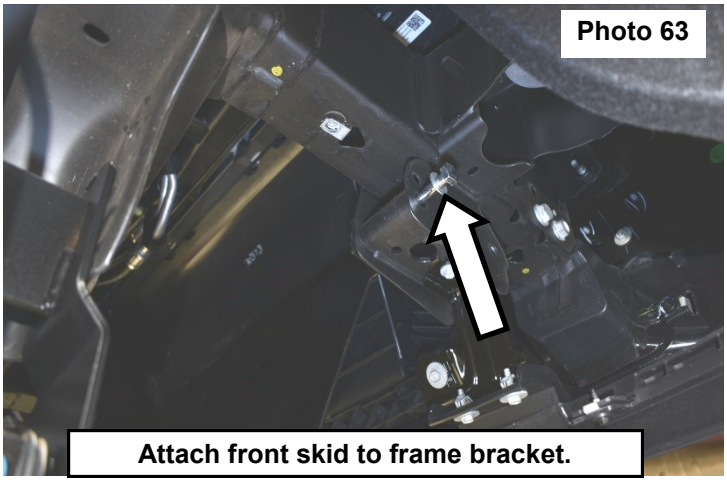
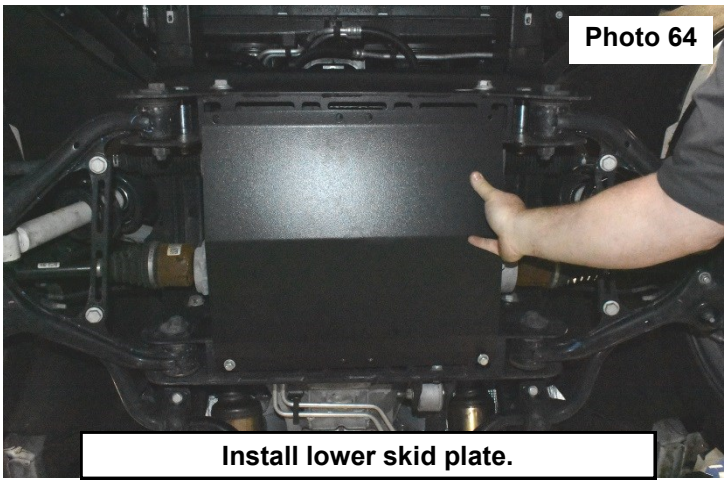


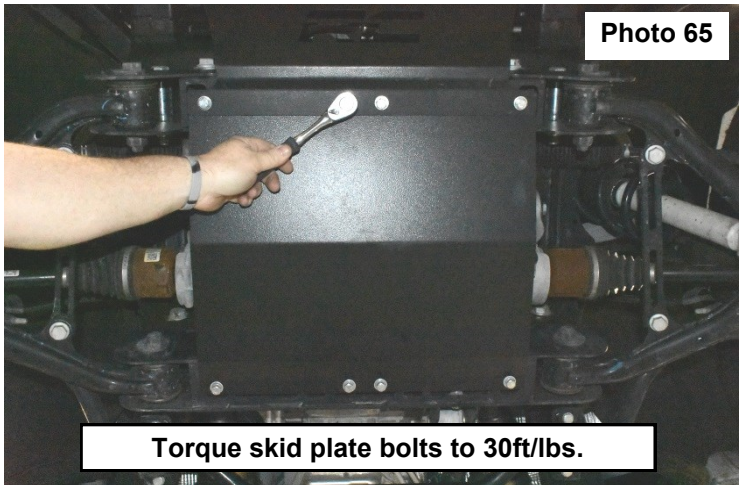
Plug in rack and pinion and diff actuator.

69. Install the supplied front skid plate on the frame using the supplied 3/8" x 3.75" bolts, flat washers and nylock nuts (217BAG2). Do not tighten at this time. **See Photo 63.**



70. Install the supplied lower skid plate using the supplied 3/8” x 1” bolts, flat washers, and lock washers (217BAG2). Torque to 30ft/lbs using a 9/16” socket. **See Photos 64 & 65.**





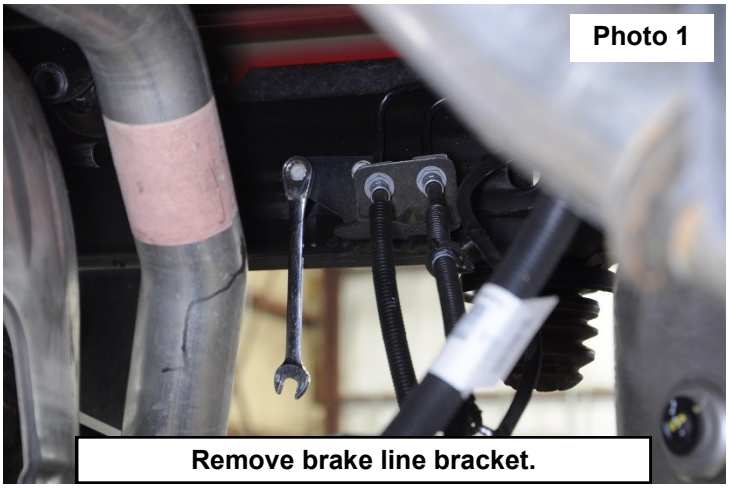
71. Torque the front skid plate frame bolts to 30ft/lbs using a 9/16” socket and wrench.
72. Install the wheels and tires.

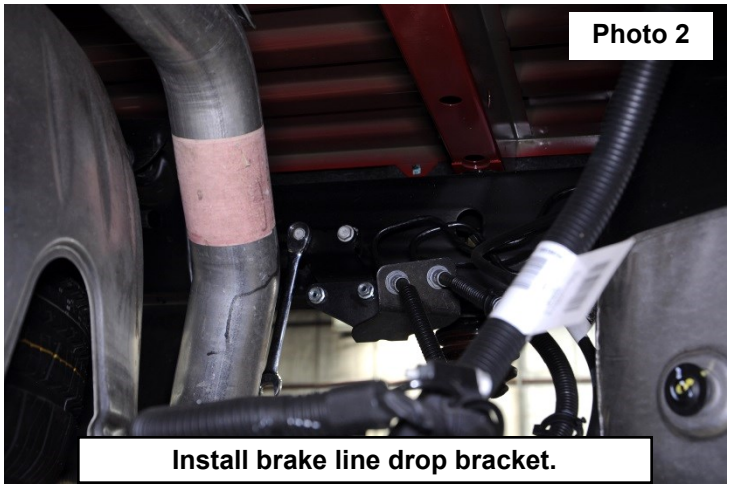
Take caution when installing the wheels, making sure they completely clear the brake caliper. Any pressure on the brake caliper from the wheel will cause an error in the brake system. The braking system will not function properly. The vehicle will have to be reset by a GM dealership.

73. Jack up the truck and remove the jack stands. Lower the truck to the ground.
74. Using a 27mm wrench and socket, tighten the cam bolts on the lower control arms. Torque to 240ft/lbs.
75. Connect the battery cables to the battery.

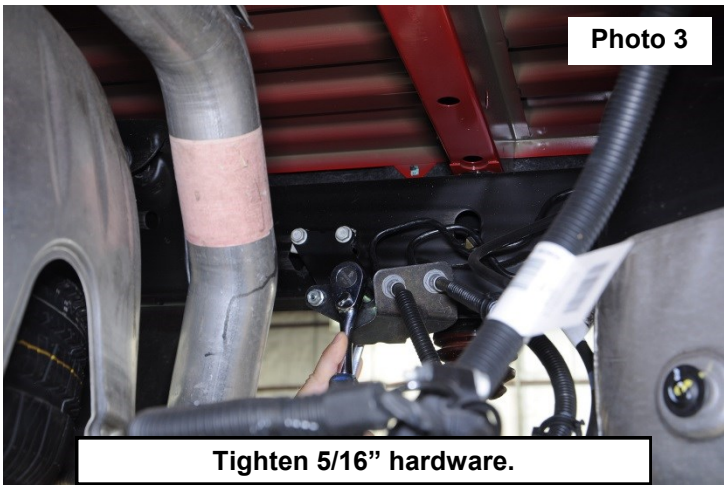
REAR INSTALLATION

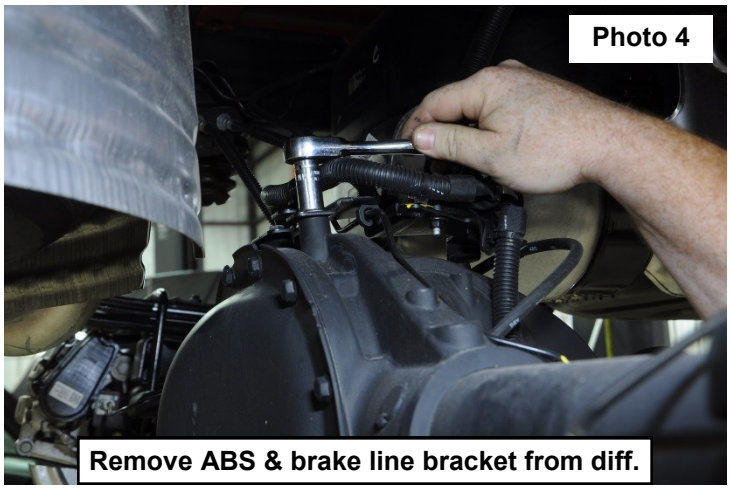
1. Chock the front tires.
2. Jack up the rear of the truck and place jack stands under the frame rails, lower the truck onto the jack stands allowing the rear suspension to hang. Place a jack under the rear differential.
3. Using a 21mm socket and wrench, remove the rear shocks. Retain hardware.
4. Using a 13mm wrench, remove the brake line bracket from the frame. **See Photo 1.**
5. Install the supplied brake line bracket using the stock hardware at the frame and the supplied 5/16" x 1" bolts, washers, and nuts (217BAG1) to secure the supplied bracket to the factory bracket. Torque the factory hardware to 18ft/lbs using a 13mm socket. **See Photo 2.**



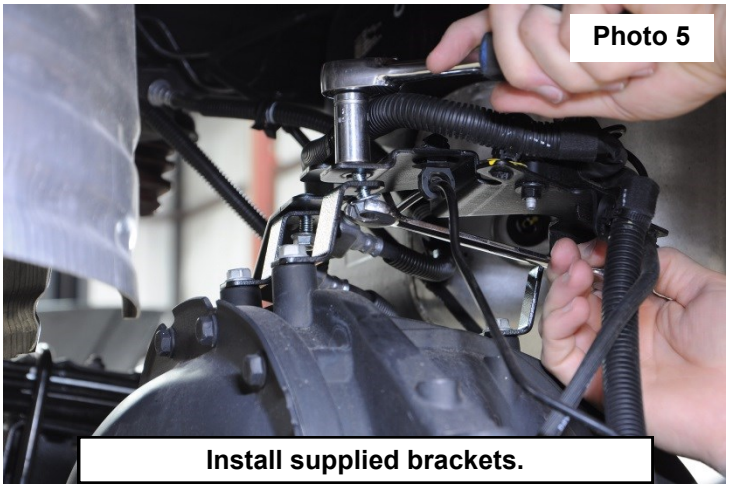


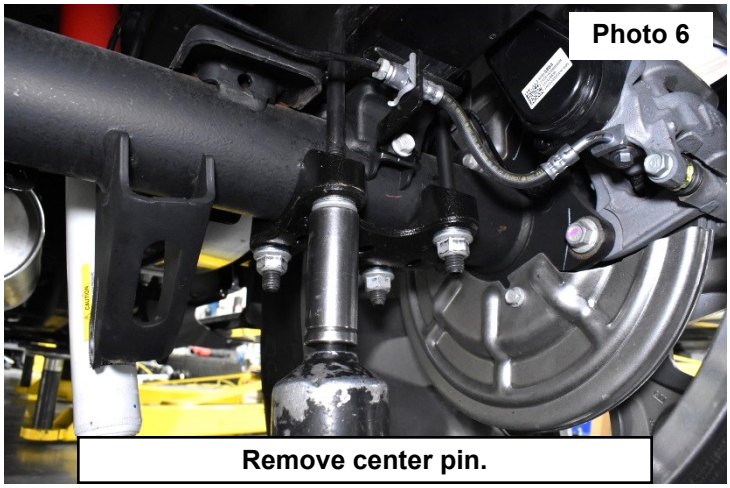
6. Torque the 5/16" hardware, using a 1/2" wrench and socket, to 15ft/lbs. **See Photo 3.**
7. Using a 13mm socket, remove the 3 bolts that attach the ABS and brake line bracket to the rear differential. **See Photo 4.**



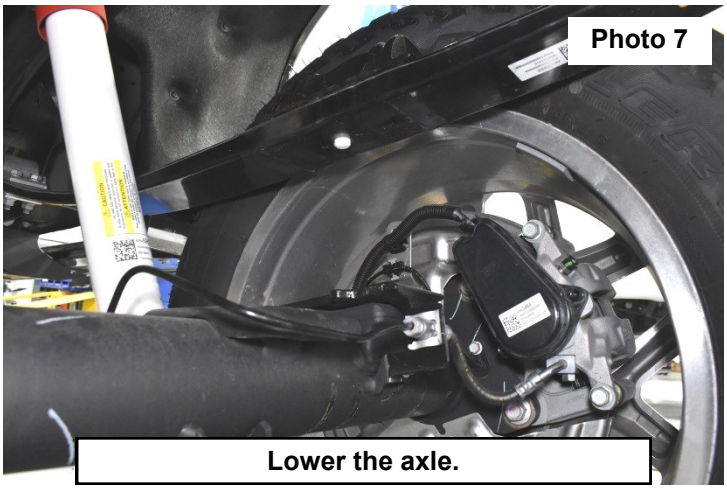


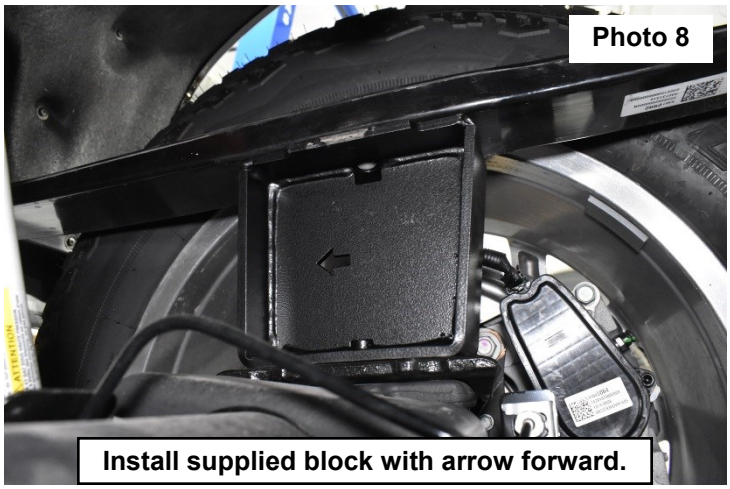
8. Attach the supplied brackets onto the differential, facing forward, using the factory hardware.
9. Attach the brake line and ABS bracket to the supplied brackets using the supplied 5/16” hardware (217BAG1). Torque the factory hardware to 18ft/lbs using a 13mm socket and the 5/16” hardware to 15ft/lbs using a 1/2” socket and wrench. **See Photo 5.**
10. Lightly support the differential with a floor jack .
11. Using a 21mm socket, remove the stock u-bolts and lower the axle. **See Photo 6** and **Photo 7**.



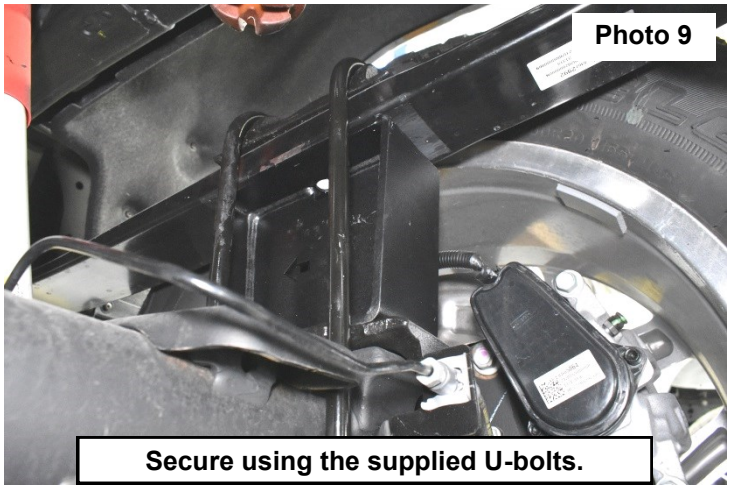


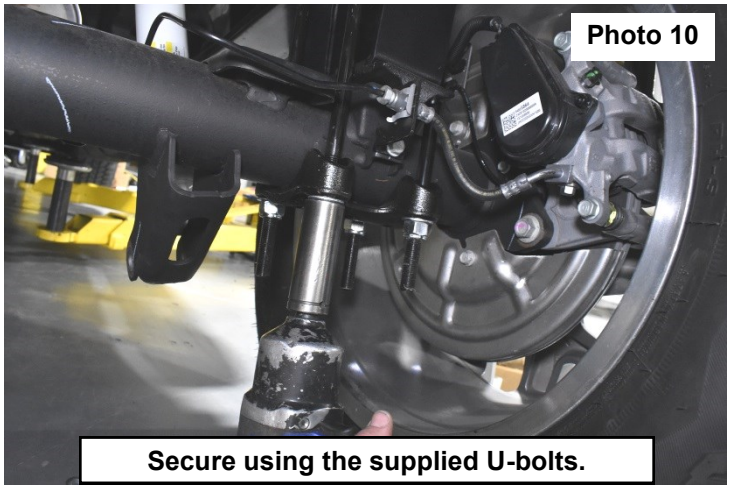
12. Install the supplied block with the arrow pointing forward. **See Photo 8.**





13. Install the new 9/16” x 3-1/4” x 14-1/2” U-bolts and using a 22mm socket/wrench. **See Photo 9.**
14. Install the supplied u-bolts and tighten using a 22mm socket and a crossing pattern. Torque to 90ft-lbs. **See Photo 10.**





17. Install shock absorbers in the factory location tighten using a 21mm wrench and socket. **See Photos 11 & 12.** Torque to 80ft/lbs. **If installing V2 rear shocks or Vertex rear shocks, refer to installation instructions included with those shocks.**

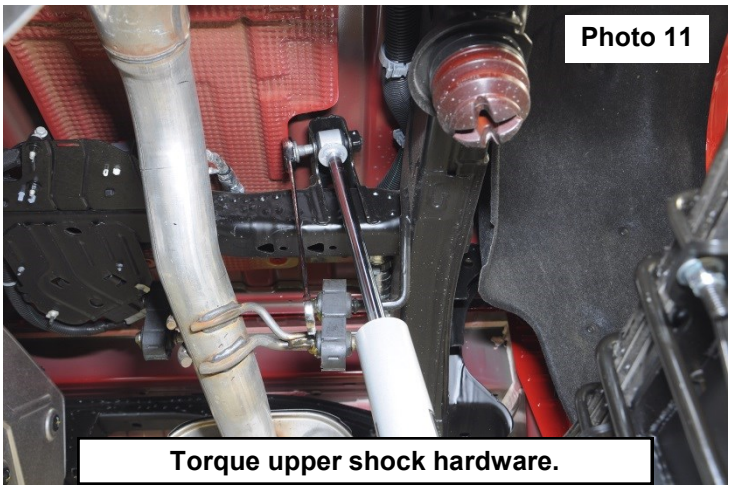


Photo 11

Torque upper shock hardware.

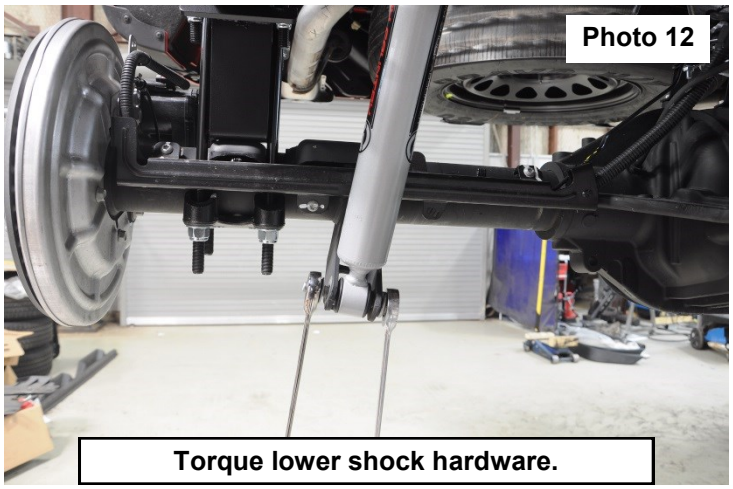

Photo 12

Torque lower shock hardware.

18. Re-install tires and wheels.

WARNING **Take caution when installing the wheels, making sure they completely clear the brake caliper. Any pressure on the brake caliper from the wheel will cause an error in the brake system. The braking system will not function properly. The vehicle will have to be reset by a GM dealership.**

19. Remove jack stands and lower vehicle to ground.
20. Place shock decals on shock absorbers and window decal on vehicle.

POST INSTALLATION INSTRUCTIONS

1. Check all fasteners for proper torque. Check to ensure for adequate clearance between all rotating, mobile, fixed, and heated members. Verify clearance between exhaust and brake lines, fuel lines, fuel tank, floor boards and wiring harness. Check steering gear for clearance. Test and inspect brake system.
2. Perform steering sweep to ensure front brake hoses have adequate slack and do not contact any rotating, mobile or heated members. Inspect rear brake hoses at full extension for adequate slack. Failure to perform hose check/ replacement may result in component failure.
3. On some vehicles the front lower skirting will need to be trimmed if using certain wheel /tire combinations and with heavy offset wheels. Trim only as needed.
4. Activate four wheel drive system and check front hubs for engagement.
5. Have a qualified alignment center align the vehicle immediately. Realign to factory specifications. The following are the recommended specifications:
   - Caster in degrees 4.0 +-1.0
   - Camber in degrees -.4 +-.8
   - Toe In in degrees 0.1 +-.2
6. Perform head light check and adjustment to proper settings.
7. Check and retighten wheels at 50 miles and again at 500 miles.
8. All kit components must be retightened at 500 miles and then every three thousand miles after installation. Periodically check all hardware for tightness.
9. Install “Warning to Driver” decal on sun visor

Note: Installation of larger tires will require speedometer recalibration.
