

92-2000 Chevy/GMC RCC9262T

Bolt kit contents:

- 12) 5/16x1" carriage bolts
- 12) 5/16 flat washers
- 12) 5/16 nuts

Needed to install:

- 3/8-drill bit & a drill
- 1/2 "gear wrench or box wrench

STEP 1: Start by locating the driver side nerf-step. To do so, look for the nerf-step that has the shorter tail bend. The shorter end will go towards the front of the vehicle.

STEP 2: There will be a 1/4 inch lip that hangs down below the pinch weld that needs to be trimmed away using a metal saw or tin snips.

STEP 3: If your vehicle is equipped with rear air, remove the bolts from the AC lines that are mounted on the passenger underside floor pan and move away from the body approximately 4-6 inches.

STEP 4: Make a mark through the slotted holes on to the pinch weld with each bracket. After marking the holes, drill out each mark with a 3/8" inch drill bit.

Important: Make sure to drill dead center in the pinch weld, approximately 1/8" inch to a 1/4" inch from the outside edge.

STEP 5: Starting with the center bracket, align slotted holes in bracket with the pre-drilled holes in the pinch weld. Next, using the 5/16" carriage bolts, insert through aligned holes and finger tighten with the 5/16" nuts and 3/8" washers. Repeat with the front and rear brackets.

STEP 6: With a 1/2" gear wrench or socket, torque each bolt location to 22 ft. lbs. Repeat steps 1-5 on the passenger side. This concludes the installation.

Note Use the rear bracket on the nerf-step to re-mount the AC lines. For part C0080S and C0166T the nerf-step mounting brackets mount over the AC lines. **Be careful not to drill into the AC lines.** This concludes the installation.
