Notes: • When repairs or service is required on existing systems with circular connectors/cables, the circular connector can be removed from an end of a connecting cable and replaced with a DT connector to facilitate connection to a DT cable length. The Legacy CHECKFIRE 110 and 210 controllers and systems will hold their FM 5320 and 5970 approval when using Johnson Controls supplied DT connector kits to make these system repairs and service.

• When retrofitting circular connectors to DT connectors refer to the Checkfire 210-D Detection and Actuation System Manual (PN:A16381NWJ9), Section 5 – Installation and Programming for cable connectivity instructions.

• The internal wire insulation colors are the same between the cables for easier identification of connections.
