

Product Description

Description

The Bosch 28-7/8 In. portable band saw blade is constructed with high-performance, industrial-grade bi-metal material for 3X life over standard portable band saw blades. Using advanced bonding technology, the bond between backer and cutting edge is significantly improved and strengthened. We've engineered the blades for faster cutting and reduced tooth stripping. With an optimized tooth geometry, each blade is developed for materials such as steel, iron and aluminum. Bosch portable band saw blades are designed to fit all portable band saws requiring a 28-7/8 In. blade.

Technical Data

Specifications

Attributes	
Application	General purpose
Blade Length	28.875
Blade Thickness	0.014"
Length	28.88"
Material	Cuts steel, iron, aluminum, other non-ferrous metals
Quantity	3
Teeth Per Inch	10-14
Thickness	.014"
Includes	(3) 28-7/8 In. 10 - 14 TPI General-Purpose Portable Band Saw Blades

Benefits

- Bi-metal portable band saw blade construction – delivers 3X life over standard portable band saw blades
- Advanced bonding technology – provides a bond between backer and cutting edge that is significantly improved and strengthened for stronger, longer-lasting blades
- Optimized tooth geometry – provides fast and clean cuts in materials such as steel, iron, aluminum and other non-ferrous metal
- Premium materials – constructed with superior metal to resist heat buildup for longer blade life
- Built to fit – Bosch portable band saw blades are designed for use in many standard portable band saws
- Optimized for portable band saws – designed to fit all portable band saws requiring a 28-7/8 In. blade
- Premium manufacturing – made with premium metal and innovative engineering
