

Changing the Way the World Works

ISSUES RETALTED TO LOUD NOISE

Continued exposure to more than 85 dB of noise may cause gradual but permanent damage to hearing.

Noise can also hamper job performance, increase fatigue, cause irritability and creates a disturbance to the local area.

The Occupational Safety and Health Administration (OSHA) is a federal agency that regulates safety (noise) in the workplace.

Portable air compressors are used both indoor & outdoor environments. Homes, Garages, Shops and Commercial Building are common locations where portable air compressors are most frequently use.

Because these locations are occupied not only the end user but other people, the creation of loud noise can create a major issue at the workplace.
