

Braided Sleeving

Split Wrap Braided Sleeving

A semi-rigid braided construction that self wraps around the bundled assembly without requiring additional fasteners (i.e. hook and loop, tape or ties).

Application

The lateral split allows the braided material to open while the 25% edge overlap folds back over connectors and splices. Split Wrap is a fast and easy way to add abrasion protection in post assembly, post termination or post installation applications. This product is non-expandable.

Benefits

- Fast, easy, wrap-around installation saves assembly time
- Semi-rigid construction maintains shape without sacrificing flexibility
- More flexible than spiral wraps and convoluted tubing
- Allows future access without disassembly
- Bends tightly without opening or need for additional fasteners
- Easy to use installation tool for fast installation

Split Wrap Braided Sleeving-Semi Rigid Construction

Material Data		
Material	Polyethylene Terephthalate (PET)	
Flammability	UL94 V0	
Operating Temperature	-94 °F to 257 °F -70 °C to 125 °C	
Melt Point	482 °F / 250 °C	
Abrasion Protection	Medium	
Recommended Cutting	Hot Knife	
Monofilament Thread D	.008 - .015
