HID Global's Networked Access Solutions provide an open architecture development platform that enables HID's software partners to deploy a wide variety of versatile access control systems that protect their customers' hardware investments.

As part of HID Global's Networked Access Solutions family, the EDGE EVO® EHRP40-K controller/reader and interface module package is a single-door access control panel with reader and separate discrete door interface that enables cost effective installation and high performance access control functionality.

The EHRP40-K controller/reader is installed at the door, and the included Hi-O interface module is mounted separately in a secure location. The controller/reader and module are connected using the secure Hi-O bus and the Hi-O module provides interface to four discrete inputs and two outputs. Additionally, the included Hi-O interface module provides interface to a second optional reader used for in/out reading.

The integrated reader offers interface to 13.56 MHz compliant credentials, including iCLASS, as well as 125 kHz compliant credentials, including HID Prox, Indala Prox, EM4102 and AWID. Solutions are created for both on-site system administration as well as service oriented off-site solutions, depending on the OEM software provider's total solution.

Features:

- Provides a complete and fully functional hardware/firmware infrastructure for IP access control software host systems.
- Supports Power Over Ethernet (PoE), enabling cost-effective installation utilizing existing network infrastructure.
- Stores a complete access control and configuration database for one door with one or two readers and 125,000 cardholders.
- Integrated reader processes 13.56 MHz iCLASS credentials, ISO14443A CSNs, as well as 125 kHz credentials, including HID Prox, Indala, AWID and EM4102.
- Utilizes module jumpers to select 12 or 24 VDC power to locks and AUX output when powering device over PoE or 24 VDC.
- Provides encrypted door bus using Hi-O technology so that controller and Hi-O door components communicate securely.
- Connects to the host and other devices on a TCP/IP network.
- Receives and processes real-time commands from the host software application, while reporting all activity to host. Buffers up to 99,999 transactions.
