## -MultiMag®

These hard-working multi-purpose electromagnetic locks enhance building security and install quickly. Several standard features make these magnets the "workhorse" of the industry.

The adjustable mounting bracket has been enhanced with keyhole mounting to support the magnet's weight during initial installation, freeing the installer's hands to affix the magnet mounting screws. The removable cavity cover offers quick, easy access to wiring.

Both models feature a built-in, adjustable time delay with instant unlock and delayed relock (up to 110 seconds), which can be controlled by any standard switching device.

Function Description		
Security Condition Sensor (SCS)	Electronic field presence sensor for remote and local LED indication of lock status (locked or unlocked), reduced holding force caused by materials between magnet and plate, and unlocked device due to current loss.	
Door Status Sensor (DSS)	Ceramic magnet-reed type sensor for remote indication of door status (opened or closed, independent of local power); magnet embedded in armature for tamper resistance; reed switch inside electronic housing cavity for easy access.	
LED Indicator	Included on SCS options, the LED gives a local indication of lock status: red – unsecured; green – secured.	
Low-Voltage Detection	Low voltage dramatically reduces electromagnetic lock holding force. This detection feature signals the SCS relay/ LED to activate (alarm) when voltage drops below 10.3 VDC (12V input) or 20.5 VDC (24V input).
