Catalog No. 20

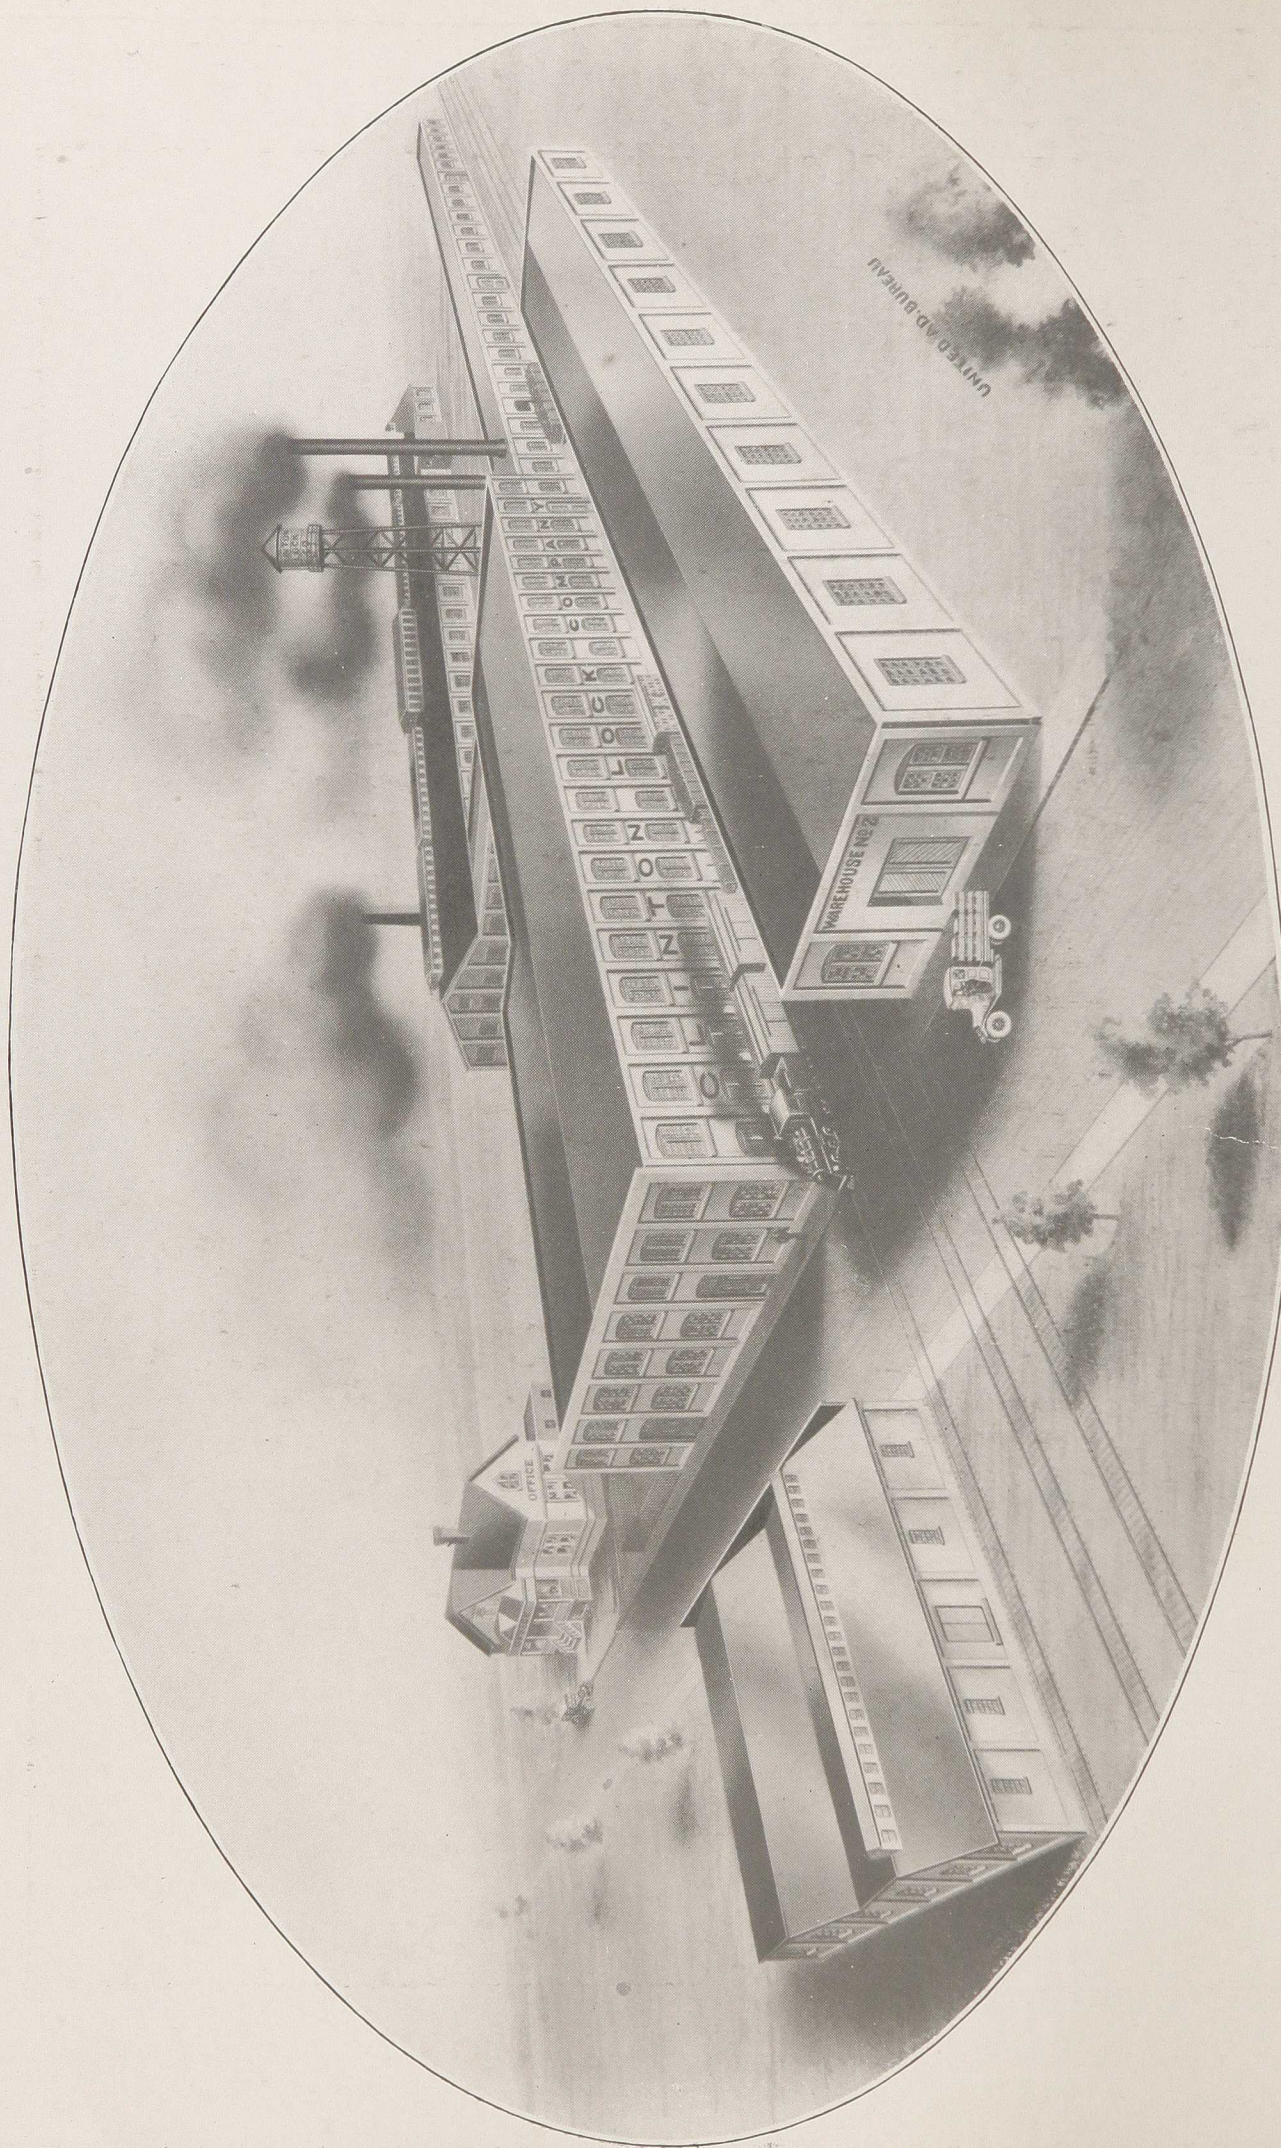

Clinton

Locks and
Builders' Hardware

Number _____

Manufactured by the
CLINTON LOCK COMPANY

Factory and General Offices
CLINTON, IOWA

Birdseye View of Factory

Announcement

IN presenting to the Trade this catalog of our product, we wish to state that we have discontinued a number of designs, also, several types of locks which are obsolete. We have made no changes in our numbering system as we consider it so simple, that it is readily understood by all. The different designs have a design name as well as number. To order a lock set it is only necessary to give the design number, and the list number of the lock desired. For example to order a Webster design inside set, which is our No. 23 design made up with a 4051 lock, the set number would be 23-4051.

We believe this book will be of great assistance to the busy buyer as well as to the Architect on account of its simplicity, eliminating the necessity of wading through a lot of printed matter of no interest in order to find out what he wants.

We stand back of, and guarantee all of our goods to be the same as represented. We exercise great care in the selection and purchase of materials, and with a model factory building and an organization of skilled mechanics it is our constant endeavor to maintain the high standard of our goods which have given universal satisfaction for twenty-five years.

Clinton Lock Company

EXPLANATION

The letter "D" prefixed to set number denotes two piece round knob.

The letter "J" prefixed to set number denotes oval knob.

The letter "H" prefixed to set number denotes hexagon knob.

Hand of Doors

In this catalog it will be stated Whether or not a Lock or Latch is Reversible; if not Reversible the Hand of the Door for which it is Intended Must be Given when Ordering.

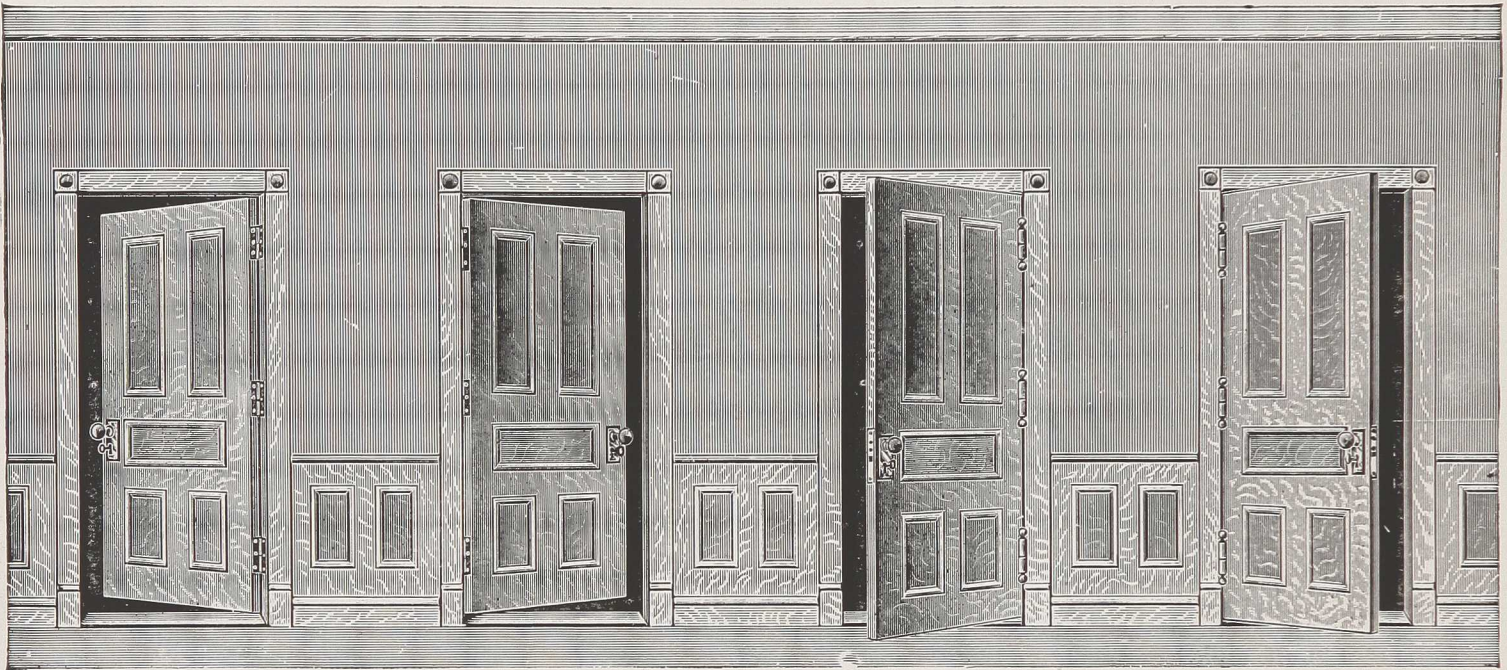

Fig. 1
Right Hand

Fig. 2
Left Hand

Fig. 3
Right Hand Reverse Bevel

Fig. 4
Left Hand Reverse Bevel

The Hand of a Door is determined by the Butt Side and from a Position Outside of the Entrance, viz.: The Street Side of an Outside Door, the Hall or Corridor Side of a Room Door, the Room Side of a Closet Door, and in a Communicating Door between Two Rooms, the Side from which the Butts are visible. If a Door Swings In from the Outside, to the Right, it is Right Handed; if to the Left, it is Left Handed. If a Door Swings Out to the Right it is Right Hand, Reverse Bevel; if Out to the Left, it is Left Hand, Reverse Bevel.

Handed and Reverse Bevel Locks are Used Principally on the Outer Doors of Public Buildings, Churches and Theaters, and on Screen and Cupboard Doors, Screen and Cupboard Locks and Latches are Regularly Made Reverse Bevel.

When Ordering Locks Described as not Reversible, Always State Hand wanted, as in the Case of Rabbeted and some Cylinder Locks, or when for Doors with Rabbeted or Beveled Faces.

When Ordering Cylinder Locks always Give Thickness of Door.

Dimensions—In all Cases where Sizes are Given, the First Number Indicates the Upright Measurement, and the Second Number Represents the Horizontal Measurement.

For description of finishes see page 1.

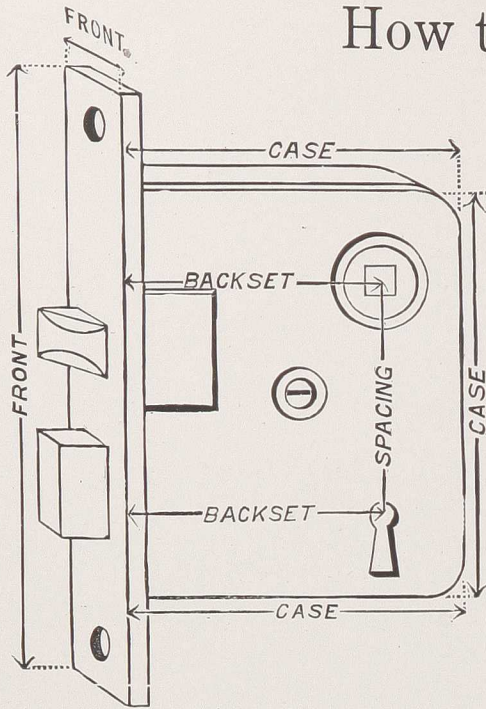

Clinton

LOCKS

Cuts half size.

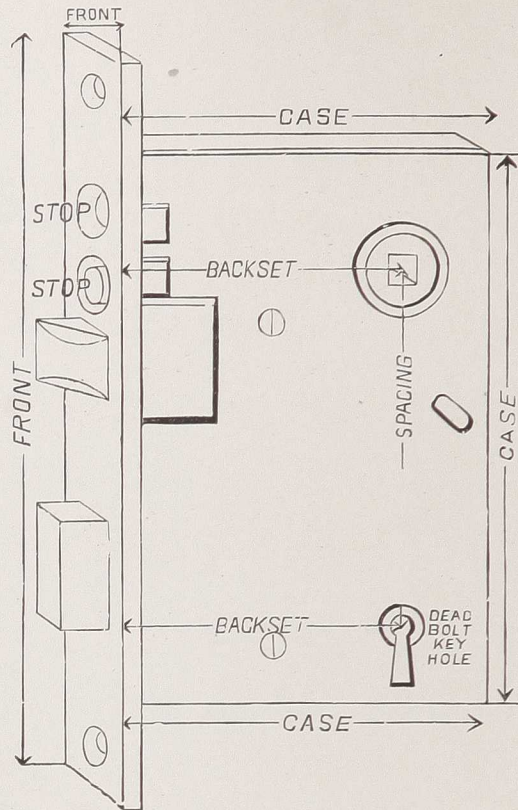

How to Measure Locks

4

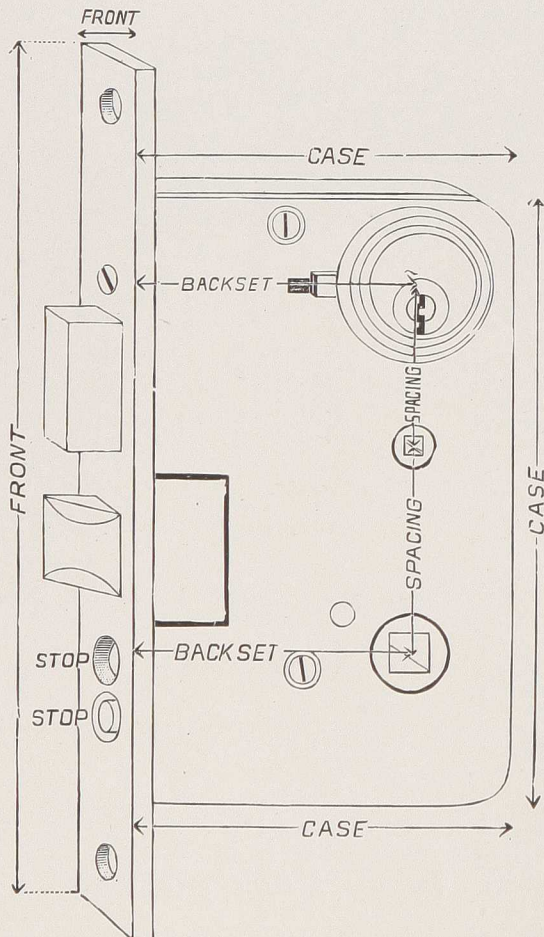

INSIDE DOOR LOCK

Size of Case—Measurement is Taken Over All.
 Front—The Front or Face of Lock is Measured Full Width and Length.
 Backset—Distance from Front of Lock to Center of Hub or Center of Key Hole.
 The Backset of a Rabbeted Lock is Taken from Both Sides.
 Spacing—Distance from Center of Hub to Center of Key Hole Post.

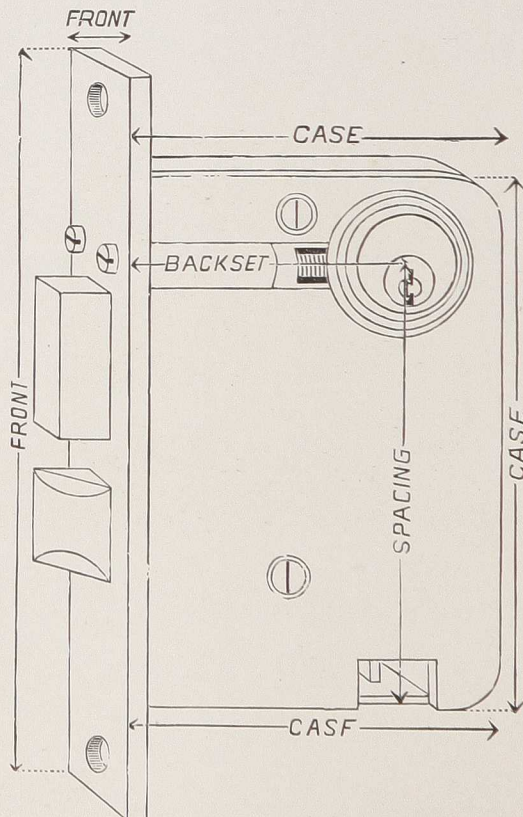

BIT KEY FRONT DOOR LOCK

Size of Case—Measurement is Taken Over All.
 Front—The Front or Face of Lock is Measured Full Width and Length.
 Backset—Distance from Front of Lock to Center of Hub or Center of Key Hole.
 Spacing—Distance from Center of Hub to Center of Key Hole Post.

CYLINDER FRONT DOOR LOCK

Size of Case—Measurement is Taken Over All.
 Front—The Front or Face of Lock is Measured Full Width and Length.
 Backset—Distance from Front of Lock to Center of Hub or Center of Cylinder.
 The Backset of a Rabbeted Lock is Taken from Both Sides.
 Spacing—Distance from Center of Knob Hub to Center of Cylinder on Outside, and from Knob Hub to Center of Thumb Piece on Inside.

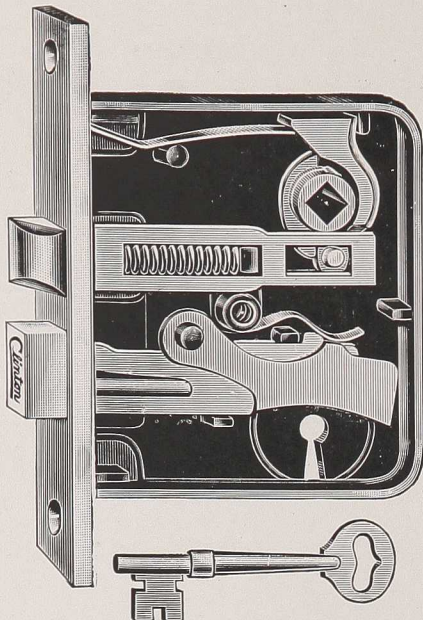

CYLINDER STORE DOOR LOCK

Size of Case—Measurement is Taken Over All.
 Front—The Front or Face of Lock is Measured Full Width and Length.
 Backset—Distance from Front of Lock to Center of Cylinder.
 The Backset of a Rabbeted Lock is Taken from Both Sides.
 Spacing—Distance from Center of Cylinder to Bottom of Latch Bolt Lever

Cuts half size.

Mortise Knob Locks

No. 4051 Series

DESCRIPTION

Case:—Japanned, cast iron..... $3\frac{3}{4} \times 3\frac{3}{8} \times \frac{5}{8}$ in.
 Front..... $5\frac{3}{8} \times \frac{7}{8}$ in.
 Backset..... $2\frac{7}{16}$ in.
 Spacing..... $2\frac{3}{16}$ in.
 Spindle.....Solid $\frac{5}{16}$ in.
 Key:—One nickel plated steel No. 150.
 Strike:—Steel $3\frac{5}{8} \times \frac{7}{8} \times \frac{1}{2}$ in. lip.
 Latch:—Easy spring.

OPERATION

Knob and key from either side.

MASTERKEYING

Can be Masterkeyed in groups of 120 or less with one Master Key to pass each group.

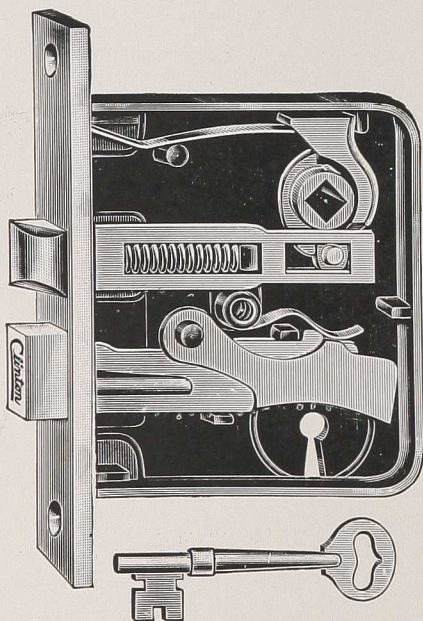

No. in box
6

No. in case
16 doz.

Weight

No. 4050 Series

DESCRIPTION

Case:—Japanned, cast iron..... $3\frac{3}{4} \times 3\frac{3}{8} \times \frac{5}{8}$ in.
 Front..... $5\frac{3}{8} \times \frac{7}{8}$ in.
 Backset..... $2\frac{7}{16}$ in.
 Spacing..... $2\frac{3}{16}$ in.
 Spindle.....Solid $\frac{5}{16}$ in.
 Key:—One nickel plated steel No. 150.
 Strike:—Brass $3\frac{5}{8} \times \frac{7}{8} \times \frac{1}{2}$ in. lip.
 Latch Bolt:—Easy spring.

OPERATION

Knob and key from either side.

MASTERKEYING

Can be Masterkeyed in groups of 120 or less with one Master Key to pass each group.

No. in box

For all types of locks. In ordering specify lock with which they are to be used. Reversible.

Door Knobs

TYPES OF MOUNTINGS

**"REGULAR" MOUNTING**

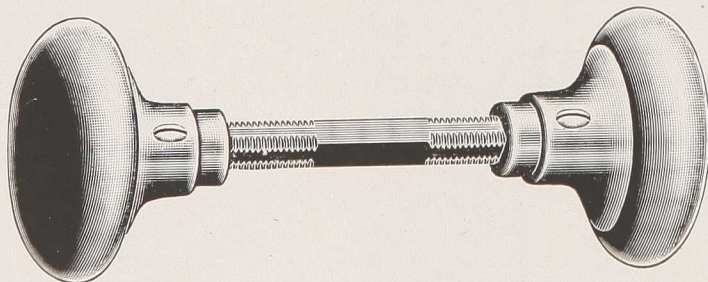

Furnished with wrot steel, wrot bronze, cast bronze, cast iron, and glass knobs.

This is the regular method of knob mounting. Both knobs are fastened to spindle by means of side knob screws. The spindle is tapped at several points to give adjustment of 1 inch, making same suitable for use on doors $1\frac{1}{4}$ inches to $2\frac{1}{4}$ inches in thickness. Other thicknesses to order.

**"LC" MOUNTING**

Furnished with wrot steel, wrot bronze, cast bronze, cast iron knobs.

This is an improved method of obtaining close adjustment without the use of washers. The outer knob is pinned fast to the spindle. The inner knob is held securely by means of hardened steel set screw. Knobs with this type mounting are regularly furnished for doors $1\frac{1}{4}$ in. to $2\frac{1}{4}$ in. thick. Should spindles for other thicknesses of doors be required, so state on order.

**"HC" MOUNTING**

Furnished with wrot steel, wrot bronze, cast bronze, cast iron and glass knobs.

This type of mounting is the same as the "LC" type described above, except that the outer knob as well as the inner knob is held secure by means of set screws. Regularly furnished for doors $1\frac{1}{4}$ in. to $2\frac{1}{4}$ in. thick. Should spindles for other thickness of doors be required, so state on order.

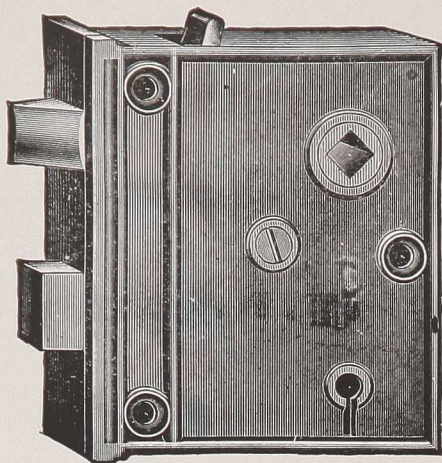

Cuts one-third size.

Ball Bearing Double Acting Floor Hinges

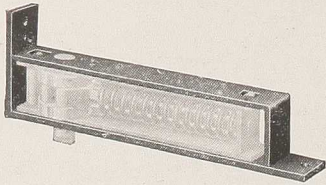

Figure 1

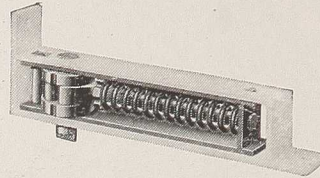

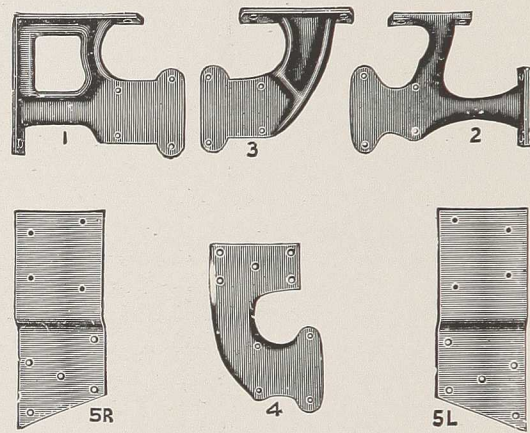

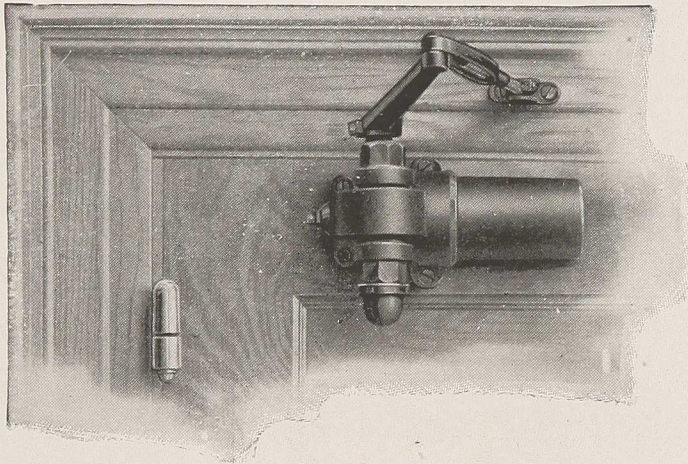

Figure 2

Dark part in figure 2 shows the spring-closing feature independent of the part which carries the weight of the door. In this Hinge the pressure of the spring is not against the hinge bearing which carries the door, but is absorbed by a 1-inch case-hardened roller, which prevents wear on the hinge bearing. This Hinge will always keep the door firmly in center of opening when at rest, as there is no possibility of wear in the hinge bearing. The screw slots in floor plate are so placed as to provide for an adjustment to secure proper alignment. The door is held open, when swung to either side, 95 degrees.

List No.	For Doors	Packed With Screws	No. in Case	Price Groups			
				1	2 & 3	4	
240	1 1/8 to 2 1/4 in.	One in a box	One dozen				Each

Door Closers---Single Acting

Brackets

This Closer can be applied to right or left hand doors without any change in mechanism. The springs in this device are set to the same maximum tension at the factory and to reduce the power it is only necessary to set the arm on the spindle. This reduces the action of the spring power without touching the spring. The whole device is filled with checking fluid, which has high lubricating qualities and will not freeze at 40 degrees below zero. It contains no alcohol.

List No.	Description	Material	Price Groups			
			1	2 & 3	4	
41-A	For light inside doors not over 3 ft. x 7 ft.	Iron				Each
41-B	For medium corridor doors and outside doors 2 ft. 6 in. x 7 ft.	Iron				"

40-E	For extra large doors	Bronze				"

BRACKETS

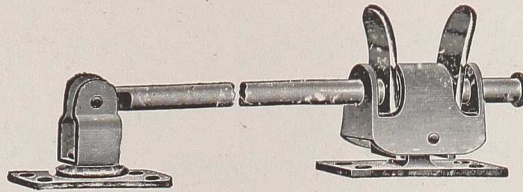

For outside doors swinging out it is best to put the closer on a Bracket inside the door as shown in the above cut. The following list applies to any of the brackets shown above. In ordering give size and type of bracket desired.

For Door Closer	Material	Price Groups			
		1	2 & 3	4	
Size A	Malleable Iron				Each
Size B	Malleable Iron				"
Size C	Malleable Iron				"
Size D	Malleable Iron				"
Size E	Malleable Iron				"

For description of finishes see page 1.

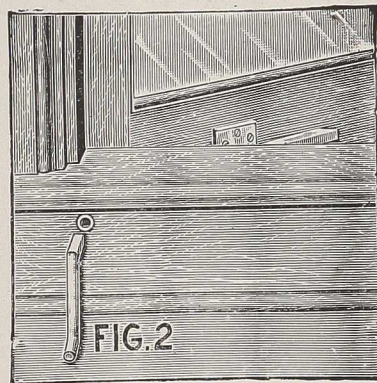

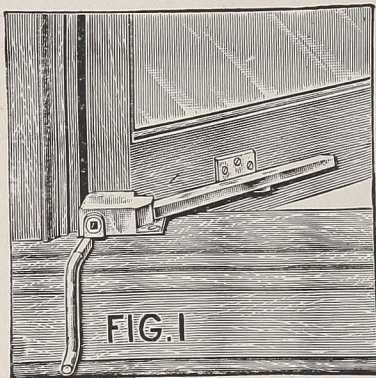

Packed with screws.

Casement Adjusters

Works sash swinging in or out; pivoted or hinged; top or bottom. Lock is automatic and positive; a child operates it with ease and absolute security. Does not interfere with screens, for it follows line of sash. Minimum distance between sash and screen, 2¼ inches. If properly adjusted there is no play.

List No.	Diameter of Rod	Material	Packed with Screws	Price Groups

01—15 in.	5/16 in.	Wrot Bronze	Six in a box				"
01—18 in.	5/16 in.	Wrot Bronze	Six in a box				"

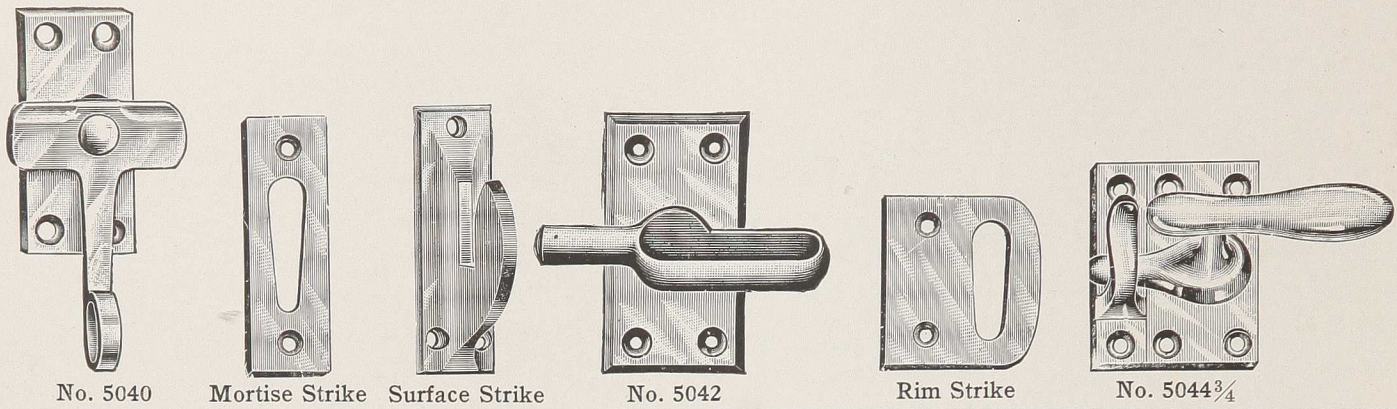

For hinged windows swinging out. A window equipped with this device is always locked in whatever position it is left and cannot be moved except by turning the handle and when closed the window is held absolutely tight; no rattle. The mechanism being of the screw type develops ample power to handle most any kind of sash up to 2 ft. 6 in. wide. The driving screw is of steel with double square threads and the traveler that runs on this screw is of cast bronze, thus avoiding the danger of these two parts rusting together. The slide which runs inside the arm is covered with fiber which makes the device noiseless and also eliminates friction. This device may be used concealed or exposed, see Figs. 1 and 2. The handle is always made detachable unless otherwise ordered. The device is not reversible and in ordering state whether right or left hand is desired, Figs. 1 and 2 show a left hand device. Also, specify whether or not device is to be placed on top of the stool or under the stool.
