Custom *Lid Decorating*

- Emboss / Deboss

Clear PET Dinnerware Lids

350 case minimum • 10 week lead time

Add a custom message to any of our PET lids that fit our dinnerware and brand you product

Clear Hinged Deli Containers

350 case minimum • 6 week lead time

Choose from our full line of clear hinged (AD) containers from 4 oz to 64 oz.

Put a message on the top of the lid in its entirety or closer to the edge, leaving room for a label.

Microwave Safe Lids

500 case minimum • 10 week lead time

Put your logo or message on these microwave safe lids and hinged lid containers with or without venting

Stock & Custom *Cup Decorating*

Printed Clear, Translucent and White Car Cups

50,000 cup minimum • 8-10 week lead time
Superior print quality to show your logo/message
for your dine in and carry out beverage program.
Clear PET cups are made with 15% post
consumer recycled PET.

Paper Cone Cups

200 case minimum (5000 cups/case)

8 week lead time

Our cone cups are made with white, 100%
compostable paper, so print colors are vibrant.

Print decorating on:

4 oz - 4.5 oz (1-3 colors)

Custom *Flexible Packaging*

Preformed Bags and Laminations

Request more information about minimums & lead times.

Our Print: Precision process printing provides choices of applying printing and
coatings to both sides of material in line and in many combinations

Our Materials: Compostable - Paper/Metcello/Compostable Sealant • Sustainable
- Cello/Cello, Cello/PLA, Cello/Metalized PLA, Metalized Cello/Compostable
Sealant. **Others:** OPP - Polypropylene, all grades, PE - Polyethylene, all grades/
guages, PET - Polyester, metalized/coated/uncoated, Paper - All types, Nylon -
coated/uncoated, bi & monoaxially oriented or cast and Foil

Clear APET Containers

Deli Containers

Features & Benefits

Made with 30% Post-Consumer recycled content • Patented 360°seal allows for a leak resistant closure

One piece construction • Excellent water-vapor barrier for extended shelf life

Works well with automated filling and sealing lines

Oven Ready Food Trays

Quality
To Go!®

 **Genpak®**

Genpak Oven Ready Food trays are produced using premium quality PET material that is safe for conventional ovens up to 400° F* or for microwave applications. Both trays will accept a film seal and are perfect for any prepared or frozen meal application.

*** For home oven use always preheat the oven to no more than 400°, use the center rack and always place the tray on an aluminum cookie sheet.**

Foam Packaging **FACTS**

from  **Genpak®**

Foamed Polystyrene Supports U.S. Jobs

Foamed polystyrene products not only play a critical role in food packaging by protecting and preserving food quality, but the foam polystyrene industry also plays a vital role in the United States economy. According to the US Census Bureau, in 2010 the manufacture of foamed polystyrene products in the US currently directly supports well over 20,000 domestic jobs. Now consider the downstream flow of indirect supporting jobs that are linked to this industry and you can quickly see the production of foamed polystyrene is a driving force in the economy. At a time when jobs are scarce and the economy is struggling, is it really the best solution to ban products produced right here in America in favor of products that are mainly produced overseas? Not only are many alternative products imported, but they are much more expensive than foam foodservice products, which puts undue pressure on small business owners trying to stay profitable.

Polystyrene Requires Less Energy To Produce

An average-weight polystyrene foam cold cup requires approximately half as much total energy to produce than a representative-weight wax-coated paperboard cup¹.

If all polystyrene packaging were replaced with corrugated cardboard, paper, wood, molded fiber etc., compared with current figures raw material requirements would rise to 560%, power consumption to 215% and the landfill volume to 150%². Polystyrene packaging requires less energy than many other material of similar design.

Polystyrene Uses Less Raw Material

Foam packaging is 98% air. Polystyrene feedstock is converted into a finished product 32 times its original volume—virtually turning air into a strong and efficient packaging material³. Polystyrene is an efficient material to manufacture using minimal material to produce a finished product. The drive for efficiency is a core value at Genpak. Efficiency is defined as producing effectively with a minimum of waste. Not only is little polystyrene required to make a finished good versus other materials, the manufacturing scrap material can be used again. Genpak recycles all foam scrap back into the production process for a closed loop.

Polystyrene Is Safe & Healthy Throughout Its Life Cycle

Clean to produce. Innovations in manufacturing technologies ensure polystyrene production minimizes energy consumption with mold cavities that cool quickly and manufacturing processes that recycle water and meet all EPA guidelines for emissions. Our foam packaging is not manufactured with chlorofluorocarbons (CFCs).

Polystyrene Is Safe In Food Service

Polystyrene meets stringent U.S. FDA standards for use in food contact packaging and is safe for consumers.

Health organizations encourage the use of single-use food service products, including polystyrene, because they provide increased food safety⁴. The use of single-use packaging is a major step toward preventing food borne illness. Used only once, these products significantly reduce food contamination and the spread of diseases. According to a 2003 survey of food service operations in Las Vegas conducted by the Clark County, Nev., Health District and analyzed by Silliker, Inc., "reusable food service items had higher microbiological levels than disposable items." It helps eliminate possible cuts and scratches caused by chipped or broken crockery and glassware. Disposable packaging also eliminates the need for dishwashing requiring detergent and the possibilities of spill-overs of water which could result in potential workplace hazards⁵.

Polystyrene For Use As Energy

Polystyrene packaging burns cleanly in modern municipal Energy-from-Waste facilities.

Polystyrene foam is composed of carbon and hydrogen. When properly incinerated, polystyrene foam leaves only carbon dioxide, water, and trace amounts of ash. In modern waste-to-energy incinerators, the energy generated by the incineration of polystyrene packaging and other solid waste can provide heat and light for neighboring communities⁶.

Polystyrene For Use as a Recycled Material

Recycled polystyrene is used in both closed-loop and open-loop processes to make a variety of items from recycled-content foam packaging to durable goods and innovative new building products. In 2010, more than 50% of all polystyrene collected for recycling was used to make recycled-content packaging⁷. The rate of recovery for recycling of polystyrene disposables and protective packaging more than doubled from 1989 to 1994 and the 2010 Polystyrene Recycling Rate Report shows that over 71 million pounds of polystyrene were recycled, including 37.1 million pounds of post-consumer packaging and 34.2 million pounds of post-industrial packaging⁸.

Polystyrene Foam Packaging Is Received At Some Recycling Centers

Check your local municipality for a recycling center near you. In Canada, foam cups and containers can be and are currently being recycled. In fact, in Ontario, approximately 90 municipalities, representing over 50 percent of all households in the province, have access to Blue Box recycling programs (both curbside and depot collection) that collect post-consumer foam cups and containers. Also, the City of Toronto added foam cups and food containers to their Blue Box program in December 2008.

Accounts For Less Than 1% of Total Landfill Waste

Compared with many other packaging materials, polystyrene represent less than 1% of all products generated, by weight, in municipal solid waste. Of this total, polystyrene food service packaging accounts for approximately 0.4 percent, by weight, of all polystyrene products generated. This category includes items such as cups, plates, bowls, trays, clamshells, meat trays, egg cartons, yogurt and cottage cheese containers, and cutlery⁹.

Polystyrene is Stable & Safe In Landfills

Polystyrene is an inert material which does not produce gas or leachates during its use or disposal. Polystyrene, like most plastics, does not biodegrade. Engineers design modern landfills to discourage biodegradation by removing oxygen, sunlight, and water. The lack of biodegradation may be a positive feature of foam/plastics, according to archaeologist Dr. William L. Rathje, professor emeritus of anthropology at the University of Arizona and one of the nation's foremost authorities on solid waste and landfills. "The fact that plastic does not biodegrade, which is often cited as one of its great defects, may actually be one of its great virtues. When polystyrene foam products are buried in landfills, they are as stable and harmless as rocks, concrete, and other inert materials¹⁰.

Foam Facts Summary

- Foam industry directly supports over 20,000 domestic jobs.
- Foam products require less raw materials versus alternative packaging.
- Foam products are a low cost, high functioning option.
- Foam products are completely safe to use and have many end of life scenarios.inert materials¹⁰.

Polystyrene Info

✓ Polystyrene ≠ Styrene

Polystyrene and styrene are different substances. Although polystyrene is made from styrene, equating polystyrene with styrene is like equating a diamond with carbon. They're not the same substance.

✓ FDA: Polystyrene Foam is Safe

The U.S. Food & Drug Administration, the agency charged with scientific review and approval of food contact applications, has determined for more than 50 years that polystyrene is safe for use in foodservice products.

✓ Polystyrene is Being Recycled

Polystyrene foam foodservice packaging is being recycled in many communities across the country. For example, more than 20 percent of Californians can recycle polystyrene foam in curbside programs.

✓ National Toxicology Program: "Let me put your mind at ease ..."

NTP Director Dr. Linda Birnbaum, Ph.D., was quoted widely in Associated Press reports in June 2011: "Let me put your mind at ease right away about polystyrene foam*...In finished products, certainly styrene is not an issue."

✓ Polystyrene Foam Foodservice = 1.5% of Litter

While all litter should be reduced, polystyrene foam foodservice packaging makes up 1.5 percent of litter, according to a May 2012 national report by environmental consulting firm Environmental Resources Planning.

Flexible Packaging

Genpak is a leading manufacturer of retail, processor and foodservice Quality to Go rigid and flexible packaging. Our company is a full line converter of flexible packaging for processors of snacks, pasta, confectionary, medical, cookie, lawn & garden, bottle label, pet food and coffee. Among our 17 manufacturing plants and warehouses are our flexible packaging facilities located in Aurora, Ontario and Bloomington, MN. Our R & D provides cutting edge new substrates and manufacturing processes to ensure our customers receive the most advanced flexible packaging solutions in the marketplace today.

Our Capabilities

• Laminating & Extrusion • Preformed bags • Flexographic printing • Die cut window roll stock

Our Materials

You have vision. We have solutions. We provide answers for many application challenges that deliver longer shelf life to manufacturing efficiency.

Compostable - Paper / Metcello / Compostable Sealant

Sustainable - Cello / Cello, Cello / PLA, Cello / Metallized PLA, Metallized Cello / Compostable Sealant

Others

OPP - Polypropylene, all grades, **PE** - Polyethylene, all grades / gauges, **PET** - Polyester, metallized / coated / uncoated, **Paper** - All types, **Nylon** - coated / uncoated, bi & monoaxially oriented or cast and **Foil**.

Flexographic Printing

Score top quality print with 10, 9, 8 or 6

Precision process provides the choice of applying printing or coatings to both sides of a material in line and in the following combinations:

- ★ **10 color flexo**, both process and line color and 1 color rotogravure on the same or opposite surface.
- ★ **9 color flexo** and release lacquer on one surface plus roto applied cold seal on the opposite surface.
- ★ **8 color flexo** Fischer & Krecke all interchangeable anilox & sleeves, with 10 color press.
- ★ **6 color flexo** on one surface plus 1 color gravure on the opposite surface.

Lamination

Our lamination processes include many combinations of material from film, metalized film, foil and paper using extrusion, or dry bond adhesive (water or solvent based). Extrusion laminators can also be used to extrusion coat materials. Choose solvent or solvent less adhesive laminations.

Genpak laminations portfolio provides results including high barrier to oxygen and water, high chemical or product resistance, hermetic or peel able seals, MAP (gas flushing), hot filled, boilable or pasteurized. Laminations are customized for optimal performance on either horizontal or vertical form-fill-seal applications. Some of the popular laminations include:

Cello/Compostable Sealant, OPP/Adh/OPP or OPP/PEX/OPP for pasta, snack and confectionery.

OPP/Adh or Extrusion Metalized OPP for snacks, potato chip.

PET/Adh/LLDPE for confectionery, cough drops, nuts, etc.

Metalized PET/Adh/LDPE-EVA for coffee and snacks.

Paper/PEX/Metalized PET/Adh/ Ionomer for potato chips.

PET/PEX/Metalized PET/ PEX/PE for stand-up pouches.

Genpak Print Advantages

- Vary the repeat length infinitely on our gearless press.
- Apply overprint lacquer which can be high gloss, protective or slip modified.
- Print various papers, films, metallized films or laminates surface or reverse print.

State of the Art

make your product pop
with graphic appeal!

Preformed Bags

• It's All in the Bag •

Just the way you want it to fit, with the best construction to suit your product, image and application overall.

Choose from a variety of bags.

- S.O.S. – Square bottom bags with or without Tin Tie closures.
- Paper bags with Paper Liner (e.g. Popcorn bags).
- Paper bags with OPP or PET liners (Coffee, cookies or corn chips).
- OPP/Paper laminations with OPP or PET liners (Coffee or cookies).
- Paper Bags with die cut window and liner film.
- Wedge Bottom Bags with gussets, window and heat sealable liner.
- (Noodles or biscuits).
- Stand Up pouches, with or without zippers (film/film or film/foil/film).
- Polyethylene bags – side weld sealed, wicketed, gusseted or with reinforced headers.
- Cellophane or Plastic bags with or without side gussets.

Die Cut Window Roll Stock

- **INCREASED OUTPUT/MAN HOURS** - By automating the packaging there will be increase in number of packages/hour produced.
- **REDUCED LABOUR COST** - The number of manual packers will be reduced !!
- **INFESTATION ELIMINATED** - Insects cannot enter the bag because the package is now heat sealed.
- **LONGER PRODUCT SHELF LIFE** - The Die Cut Roll stock provides better barrier than pre-made bags. It can be manufactured to be flushable for extended shelf life.
- **LESS INVENTORY SPACE REQUIRED** - The Die Cut Roll stock will take 20% less storage space than bulky pre-made bags prior to packing.
- **LOW COST MACHINING CHANGEOVER** - Existing form and fill equipment can be modified to use Die Cut Roll stock.
