HOLE FILLER DISCS

INSTRUCTIONS

The ADD1 disc is used to cover any hole opening in doors with holes under 1 1/2" in diameter. The overall discs dimension is 1 5/8" in diameter.

These discs are usually used to cover holes left from mortise/rim cylinders. The installation is simple!

With the door cavity empty, place the blank disc over to cylinder hole. While holding the disc over the hole insert the screw and retention wing inside the door cavity and tighten to secure disc to the door.

Your installation is complete.
