

Instructions

No. CO-87

Button Clutch™

The Button Clutch™ will allow you to lift upward on many styles of lock buttons, for quick professional damage free opening.

PREPARATION

Using an HPC No. AW-99 Air Wedge® or AW-100 Universal Air Wedge®, wedge door open above lock button location, or as close as possible, allowing a space for entry of tool into the vehicle.

INSERTION

1. Position the loop end of tool over lock button (Fig. 1).
2. Separate tool handles, by pulling upper handle upwards.
This causes the wire loop to snare lock button (Fig. 2).
3. Pull up on lower handle to raise entire tool and lock button (Fig. 3).
