The model FA610-68 is the latest in a series of **wall mounted hands free faucets** available from MAC Faucets. This faucet is ideal for bathroom applications where a wall mounted automatic faucet is an indispensable component of the room's overall design element. The model FA610-68 features **integral component system design**. This means that all hardware is housed within the body of the faucet itself. No additional hardware is needed below sink, or behind wall except for the optional water mixing valve. Another unique feature is the **“body sensor”** feature instead of the standard “hands sensor” feature. Body sensor turns the water on when a user approaches faucet and turns water off when the user leaves vanity area. No more waving of hands to activate faucet.

The model FA610-68 is the latest in a series of **wall mounted hands free faucets** available from MAC Faucets. This faucet is ideal for bathroom applications where a wall mounted automatic faucet is an indispensable component of the room's overall design element. The model FA610-68 features **integral component system design**. This means that all hardware is housed within the body of the faucet itself. No additional hardware is needed below sink, or behind wall except for the optional water mixing valve. Another unique feature is the **“body sensor”** feature instead of the standard “hands sensor” feature. Body sensor turns the water on when a user approaches faucet and turns water off when the user leaves vanity area. No more waving of hands to activate faucet.
