

HIT-460 PRACTICE INSTALLATION STATION

Don't practice installing locks on your customer's doors! Now you can try out new installation tools and procedures before you go out on a job. Designed to hold aluminum door and jamb material, it's the perfect way to practice installing electric strikes, locks and latches. Don't have door or jamb material? We can supply that also. The 30" long HIT-461 door style is drilled and tapped to fit the Installation Station and will allow 2 lock installations. The 18-1/2" long HIT-462 can be used for 4 electric strike installations. The HIT-460 can also hold your wood blocks for other types of practice. The HIT-460 Practice Installation Station is a great addition to a hands on employee training program.
