

E-2035 MS Sedco ID20 Industrial Door Activator

The ID20 is a long range microwave motion sensor for activating automatic industrial doors. Features include a speed selectable switch that makes the unit capable of detecting pedestrians and/or vehicles. Detection mode is selectable between approach-only or depart-only motion and the weatherproof housing makes it ideal for exterior applications. Microwave technology allows the ID20 to detect larger objects, such as fork trucks, up to 60 ft. away. Maximum pattern size is approximately 18 ft. wide at 60 ft. from the unit and is adjustable via a range potentiometer on the printed circuit board. The ID20 is not affected by air motion, change in temperature, humidity, color or background variations and is an ideal alternative to in-ground loop detectors.
