Pemko Announces Improved Hardware for Sliding Door Systems

Pemko is pleased to announce the rollout of several improvements for the hardware utilized in three popular sliding door systems. Effective immediately new hardware components will be included in the following kits:

System	Catalog Page #	Price Book Page #
Sliding 200 Series	232	71
Side Wall Track System	233	71
Bypass Track Series	234	71

The new hardware is more robust for enhanced performance.

The new **H222R1 hanger**, which replaces the 284 hanger, is constructed with a zinc alloy body and wheels. The wheels are coated in nylon for a smoother, quieter operation and require less than 3lbs of force to move a 200lb door. The 286 clip stop has been replaced by the **TELS-14KIT** which adds an additional screw for better in-use durability.

Hardware kit H100/200PACK has been replaced by the new kit **H200PACK** that contains these updated components.

Because of the changes above, 284, 286 and H100/200PACK are discontinued immediately.

Existing Part Number	New Part Number
284	H222R1
286	TELS-14KIT
H100/200PACK	H200PACK
