

Cutouts

This drawing shows typical location of cutouts on armor plates and door edges. It also illustrates non-mortise door edges, but this can be used as a guide for armor plates with overlapping door edges or no door edges. Use this as a worksheet to make your own drawings or photocopy and fill in your dimensions.

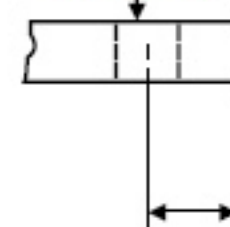

For Hinge Cutouts: Be sure to allow for door undercut and location of edge on door if other than flush with bottom.

For Lock Trim Protection: Consider using a trim protector bar.

NOTE: Your door thickness is a nominal dimension. Doors can vary $+ \text{ or } - 1/16"$ from the nominal dimension. When ordering, verify actual door thickness to assure a working fit of the door edge.
