SARGENT

OUTSTANDING ADVANTAGES

of the SARGENT CLOSER

Universal Application Without Changing Parts!

The double rack and pinion principle permits right- or left-hand application *without changing or repositioning any parts.*

Damage-proof Adjustable Spring!

Spring may be adjusted to provide up to 130-percent increase in closing power. Overloading is prevented by an asymmetrical ratchet which limits the adjustment.

Balanced Spring Mechanism!

The tough helical coil spring insures maximum efficiency and balanced power for either right- or left-hand operation.

Fool-proof Speed Adjustment!

Sargent's double rack and pinion mechanism permits the use of just one valve assembly. There is no chance of adjusting the *wrong* valve and upsetting the correct operation of the closer.

Two-speed Single Valve!

Sargent's single valve permits independent speed control from two points:

- (1) from 90-degrees to about five inches from closed.
- (2) From five inches to closed position.

180-Degree Opening with Standard Application!

The standard Sargent Closer arms and brackets permit a full 180-degree opening without changing the location of the closer.
