Present Factory Occupied in 1921

*T*HERE is no photograph of the original factory occupied by James Sargent and Colonel Greenleaf from 1865 to 1868 which was on the site now occupied by the Powers Building.

History

SARGENT & GREENLEAF was first organized in 1865 when James Sargent after many lock inventions, joined with Colonel Halbert Greenleaf in the manufacture of locks in Rochester, N. Y. At that time locks were very crude in design and Mr. Sargent lent his inventive genius to the art. Invention followed invention in rapid succession—each invention marking a definite step forward in the industry. He invented a greatly improved Time Lock—a safeguard without which no vault, however thick the doors or walls, would be secure. The first Time Lock he made is still giving satisfactory service on The First National Bank of Morrison, Illinois, U. S. A. Today upwards of 18,000 Sargent & Greenleaf Time Locks are in use on Banks all over the world.

As early as in 1865 Mr. Sargent developed and improved combination locks so that, from locks that were easily picked by thieves, by his inventions they became absolutely pick proof. The results he obtained were warmly received by the leading safe makers and the United States Treasury Department and today Sargent & Greenleaf combination locks, with features of convenience and security that are individual, hold a leading position in the industry.

As in the manufacture of Time and Combination locks—so in “Key Locks”—Mr. Sargent developed and established certain fundamental principles in designing locks actuated by keys which the company has closely adhered to. There has never been a lock developed that is so difficult to pick as a Sargent & Greenleaf Key lock. In design, materials

SARGENT & GREENLEAF, INC.,

used and in workmanship, their quality has never been questioned. The policy of Mr. Sargent, which was to decline to manufacture locks of cheap or flimsy construction, in the belief that it depreciated the mechanical ability of the workmen—has been followed and will be maintained.

To the articles Sargent & Greenleaf made in 1865 have been added many others, all of which carry out the original purpose—the best in design, materials and workmanship.

In order to conserve the constantly widening scope of "S & G" activities a new group of factory buildings was erected and occupied in 1921. The management, both manufacturing and commercial, is in these buildings and is therefore able to give the trade personal service.

The organization, in which are men who worked with Mr. Sargent, is composed of employees who have been faithful to the company and who therefore are thoroughly familiar with the principles and policy which guide it.

Finishes

United States Standard Symbols

The following symbols affixed to the number of any article will obtain the finish described.

- 9 Polished Bronze Natural Color
- 10 Dull Bronze
- 20 Statuary Bronze
- 21 Sanded Statuary Bronze
- 19 Dead Black on Bronze
- 8 Antique Copper
- 3 Polished Brass
- 4 Dull Brass
- 6 Sanded Brass
- 14 Polished Nickel Plate
- 15 Dull Nickel Plate
- 16 Sanded Nickel Plate

The foregoing symbols have been adopted by the United States Government as a Standard for the metals and finishes described after a consideration of the symbols used by all of the hardware manufacturers. They have been adopted by "S & G" as undoubtedly many other manufacturers will.

Notes

Keys

No keys will be duplicated by number. On proper authority duplicate keys may be obtained from a clear impression made preferably on blotting paper, or the return of the lock or key.

Locks, Keyed "Regular"

Unless otherwise ordered, locks will be furnished all different with the number of keys assigned to each lock, as catalogued.

Locks, Keyed Alike

Locks ordered with "keys alike" will be furnished with one key to each lock unless otherwise ordered. There will be no extra charge for keying locks alike.

Masterkeying

For master-keying charges see price list.

Special Work

An extra charge may be made for all work not listed in catalog or price list for special finishes, lengths of horn not listed, special bolt extensions, etc.

Prices are subject to change without notice.

All quotations are made f. o. b. Rochester.

Definition of Some Terms Pertaining to Key Locks

Regular

All different, each lock operated by its own key only.

Keyed Alike

All locks keyed alike with all keys operating all locks.

Masterkeying

A series of locks, all different with a Master Key which will pass all of the locks.

Grand Masterkeying

A series of locks divided into groups, each group passed by its own Master Key and the whole series passed by a Grand Master Key.

Maison System of Masterkeying

A series of locks, either in groups alike or all different, in which the keys of all the locks in the series operate one or more other locks.

Preparatory Key System

A system in which the locks must first be set by a Preparatory key before the regular key can operate.

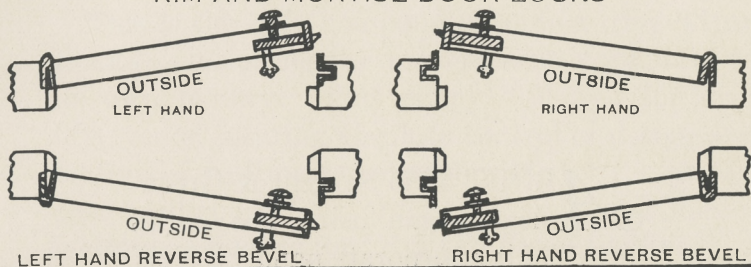

Horn Length

The length of horn is measured from its base on the lock to the end of the horn. In some cases thickness of wood must be given.

SARGENT & GREENLEAF, INC.

ABOUT 1885 Sargent & Greenleaf began using the initial letters of it's corporate name "S&G" on it's products and in it's literature—as a trade mark. These initials therefore, in varying form and design—enclosed by lines or otherwise—are secured to us by common law and through adoption and use.

The mechanical features of our products, covered by letters patent or design patent belong to this company having been acquired by law, by advertising, by use and by recognition by the public.

All persons are, therefore, warned against using any of our trade names, trade symbols, trade marks, patents, etc. Should it be necessary we shall use the law to protect our rights.

SARGENT & GREENLEAF, INC.

Bank Locks

This is the only company manufacturing **Time Locks**— including the movements—**complete** in its own factory. This policy, followed for over fifty years, insuring absolute control of design and material for all parts, is responsible for the preference vault engineers, architects, and vault manufacturers evidence for "**S & G**" **Time Locks**.

Our leading position in the industry as having designed, invented and perfected, and improved **Time, Combination, and Safe Deposit Locks** enables us to refer to large installations all over the world in federal, state and private banks.

Our **Combination Locks for Fireproof Safes** have been adopted by the more prominent manufacturers of safes.

A few types of the comprehensive line made by "**S & G**" for these purposes are shown on the following pages.

Full information and expert service is at all times available for any one interested in locking needs and correspondence is invited.

SARGENT & GREENLEAF, INC.

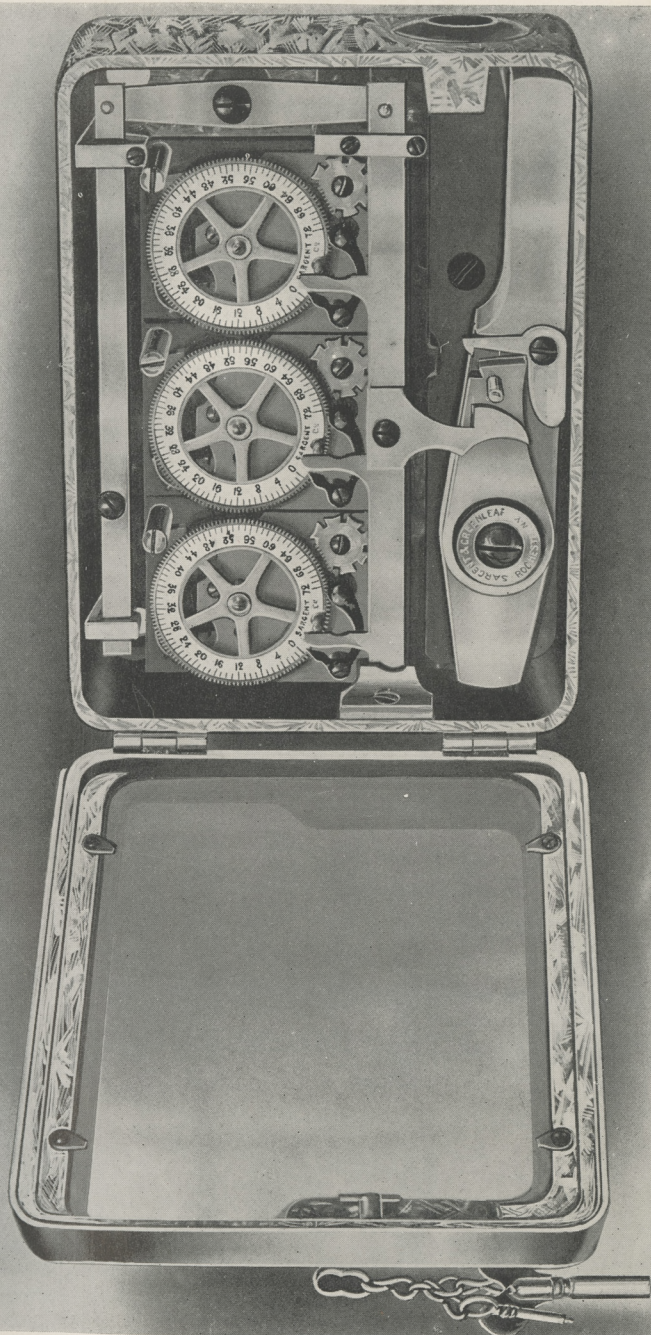

Time Locks

A Time Lock is an unlocking device. The movements are wound for a predetermined time during which the door cannot be opened. Each movement when run down permits the stop lever to drop and the door can be opened. Two, three, or four movements are used according to the requirements.

It is more important in a Time Lock than in any other article to know who manufactures that Time Lock and whether the company manufactures every part of it in their own factory. This company itself manufactures the movements used in its Time Locks and are therefore sure of the design and the accurate functioning of every part used. This point is so important because the Time Lock controls the entrance to the bank vault, which often weighs over three hundred tons.

SARGENT & GREENLEAF, INC.

RIGHT HAND

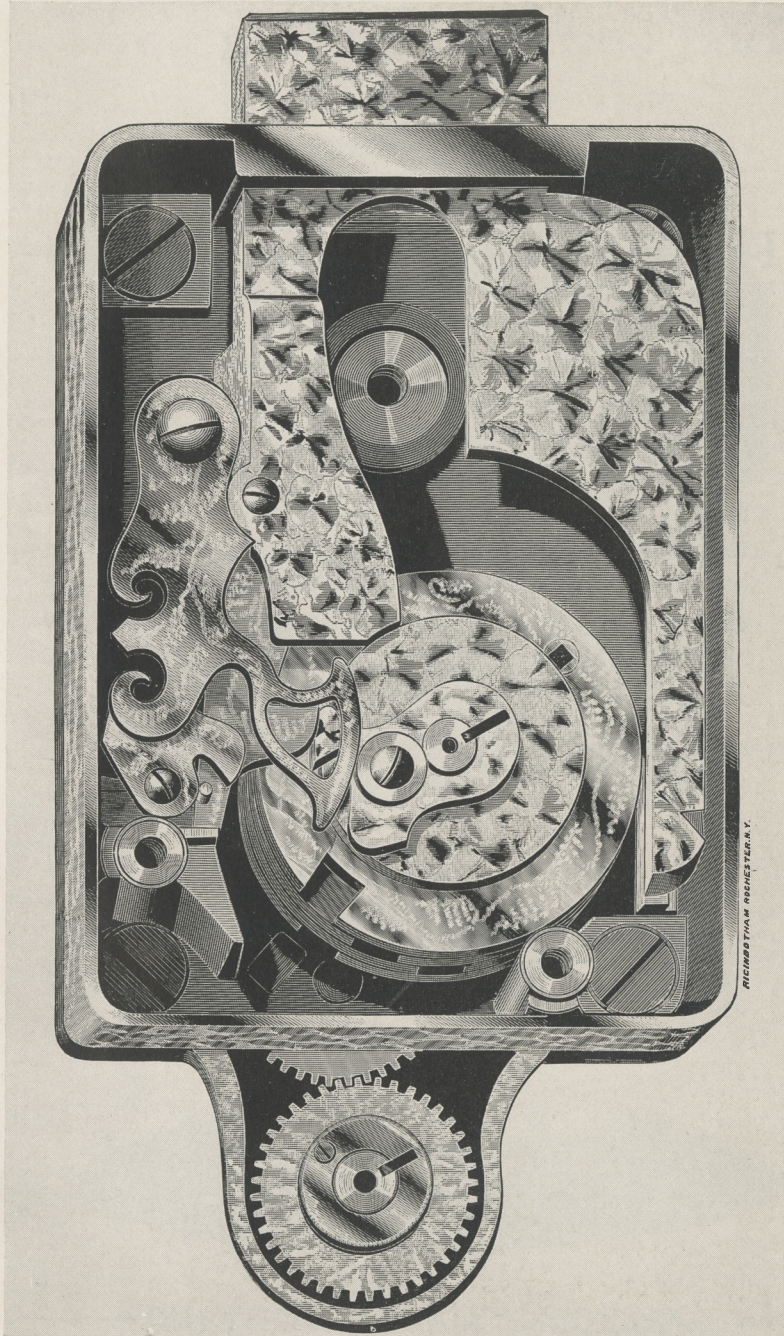

Time Lock Triple B

Combination Locks

"S&G" Burglar-proof Combination Locks represent the high inventive genius of Mr. James Sargent, who having demonstrated his ability to pick the best combination locks on the market, in 1865 set about the invention and manufacture of a combination lock that he himself could not pick. Out of this invention, which was quickly adopted by the leading safe makers and the U. S. Treasury Department, grew the national and almost world-wide reputation of Sargent & Greenleaf Combination Locks.

— SARGENT & GREENLEAF, INC. —

WIMBORNE, NEW HAMPSHIRE, U.S.A.

Combination Lock C-39½

Fireproof Combination Locks

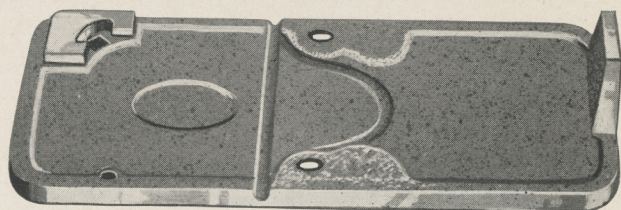

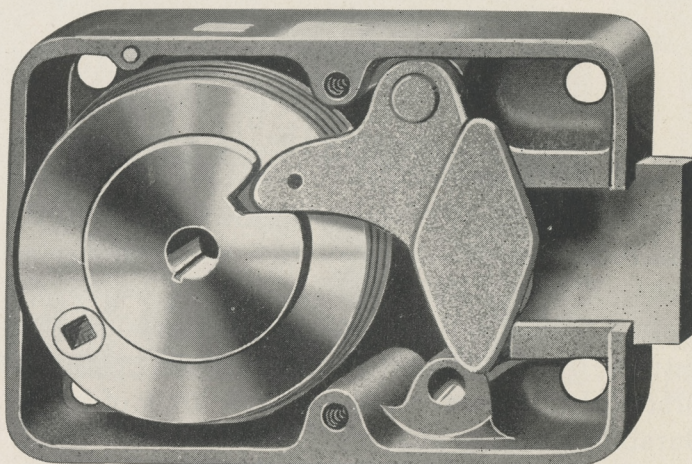

On account of the increasing burglaries of safes in stores, filling stations, etc., and the need for a combination lock that would defy the burglar who had to work quickly, Sargent & Greenleaf invented and patented a key changing combination lock embodying the burglar-proof features of the high-grade combination locks used in bank vaults. Capable of one million different combinations, convenient and proof against picking or driving off, it is, with the new dial, the best combination lock that has been devised for the purpose.

Safe Deposit Locks

Convenience of operation, durability, security, and economy are necessary factors in safe deposit locks. The "S & G" Changeable Key Lock "protecting the present from the past and insuring the future," capable of unlimited changes for all practical purposes, represents the limit of safety, durability, and economy.

Prison or Jail Locks

Prison Locks must be proof against picking and also be durable. The "S & G" lever tumbler prison locks, with nitched tumblers and fences and heavy steel keys, are pick-proof, sturdy, and are installed in prisons such as the famous Sing Sing Prison, N. Y. Separate catalogs illustrate the line and will be furnished on request.

Gem Night Bolts

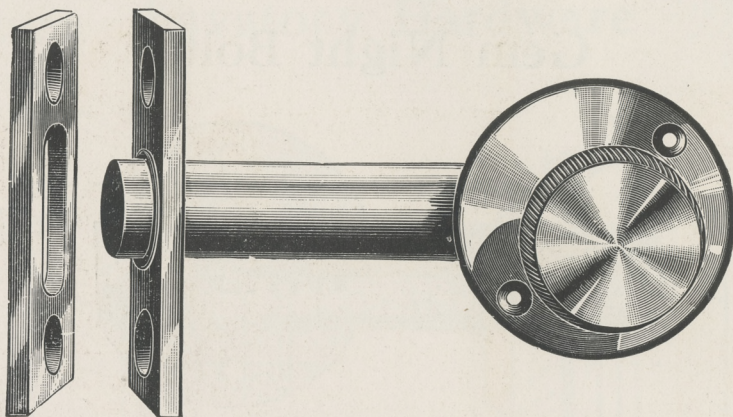

Sectional side view

For final security there can be no better device than the "S & G" Gem Night Bolt of which we were the original inventors and makers. The bolt is of cold rolled steel and cannot be jimmied. It cannot be successfully attacked as there is no indication on the outside of the door to help the burglar locate it. Its simplicity, security and durability and the superior materials, workmanship and easy application make for a wide popularity.

The counter carton is an attractive sales help.

Safe Guard Lock

No 0130

Robes, coats, etc., are stolen from cars because they are not properly guarded. Satchels, suit cases and packages are taken for lack of preventive device. The "S & G" Safe Guard Lock, taking but a few seconds to lock at any of the case hardened links of the chain, will relieve worry and responsibility.

A counter carton in beautiful colors may be obtained if so ordered, which will help the sales.

Mortise and Rim Locks and Latches

Lever Tumbler Locks properly designed and made afford the highest security against picking. Sargent & Greenleaf Lever Tumbler Locks are famous for a quality that includes security and durability—the two most important factors in a lock. Ends of tumblers and fences are nitched, affording the highest protection against picking. All interior mechanism is of brass or bronze, while the keys being of solid nickel silver do not cut the tumblers, but simply burnish the edges.

The following line represents those types for most convenient use.

— SARGENT & GREENLEAF, INC. —

Cuts Half Size

Mortise Night Latch

No. 11 Series

Sub-Treasury Locks

The locks illustrated in the following pages are designed especially for the use of safe makers and vault manufacturers, many of them, however, being applicable for other uses. In all respects, such as nitchings of the tumblers and fence, using the best obtainable materials, keys made of solid nickel silver, horns cast integral with the cover, these locks maintain the reputation of this company.
