CERTIFICATE

This is to certify that the Columbia Plant uses a minimum of 93% (by weight) recycled materials in the casting manufacturing processes for malleable, gray (cast), and ductile (nodular) iron products, such as threaded and grooved fittings, hangers, and flanges. The 93% recyclables are comprised of approximately 57% pre-consumer and 36% post-consumer recyclables.

The raw ferrous scrap material – plate and structural steel, rail crop, scrap from metal stamping plants such as bushelings, etc. – which is purchased from established recycling suppliers must pass Columbia's quality inspection process, including mandatory radiation screening before it is accepted and used in the melting process.

Certified for and on behalf of Anvil International – Columbia Plant.
