**FALSE CLAIM: Gun ownership increases personal safety in the home.**

Fact: Evidence shows that the presence of a gun in the home increases rates of homicide\(^1\), suicide\(^2\) and accidental death.\(^3\)

Fact: Approximately 43% of homes with guns have at least one unlocked firearm, including 13% with children under the age of 18.\(^4\) With access to firearms in the home, youth have increased risk to accidental injury and/or death.

Fact: In the US, 7 gun-related deaths for people ages 1-19 occur each day. This translates to twice as many deaths resulting from cancer, 5 times as many as heart disease and 15 times as many as infections.\(^5\)

**FALSE CLAIM: Guns don’t kill people; people kill people. (The same number of people would be killed even without easy access to guns.)**

Fact: US firearm homicide rates are 19.5 times higher than other high-income countries, driving our overall homicide rate that is 6.9 times higher.\(^6\)

Fact: 68% of all homicides were committed with guns in 2011.\(^7\)

Fact: The US firearm death rate is close to 2.5 times that of the second-most developed country (10.2 per 100,000).\(^8\)

**FALSE CLAIM: Gun violence is a mental health problem.**

Fact: People with mental illness are 11% more likely than those without mental illness to be victims of gun-related violence\(^9\) and four times more likely to be killed by police officers in justifiable homicides.\(^10\)

Fact: It is estimated that less than 5% of violent crimes are directly linked to a form of mental illness.\(^9\)

Fact: Individuals with mental illness receiving adequate treatment from health professionals are less likely to commit violent acts.\(^10\) It is critically important to increase access to mental health services.

**FALSE CLAIM: Increased gun legislation will not reduce gun violence.**

Fact: Studies show that there are fewer gun-related deaths per capita in states with stricter gun control provisions.\(^11\)

Fact: Homicide rates are highest among people between the ages of 18-20.\(^12\) Broadening restrictions for purchasing and possessing firearms under the age of 21 has the potential to reduce gun-related violence.

**FALSE CLAIM: Assault weapons bans do not work.**

Fact: The previous law allowed for the sale of “copy cat” weapons, “grandfathered” weapons and import of assault weapons that accepted large capacity magazines (LCM).\(^13\)

Fact: It is estimated that banning LCMs could result in 100 fewer homicides, 500 fewer wounded by gunshot and thousands fewer experiencing psychological trauma due to mass shootings annually.\(^14\)

Fact: After the assault weapons ban was lifted, 37% of police departments surveyed indicated an increase in the use of assault weapons by criminals.\(^15\)

**FALSE CLAIM: Increased background checks won’t help decrease gun violence.**

Fact: A study of 53 US cities by Johns Hopkins shows states that require background checks have 48% lower intrastate gun trafficking rates.\(^16\)

Fact: In states requiring background checks, 38% fewer women are shot and killed by their intimate partners.\(^17\)

Fact: According to a CBS News/Yew York Times poll in January 2013, 92% of Americans favor universal background checks for all potential gun buyers.\(^18\)

**FALSE CLAIM: The only thing that stops a bad guy with a gun is a good guy with a gun.**

Fact: Mass shootings occurred at schools despite the presence of an armed sheriff’s deputy on the Columbine campus and an on-campus security team at Virginia Tech.\(^19\)

Fact: The number of gun-related fatalities and injuries are highly correlated with the presence of more guns. There is a fivefold increase in suicide and threefold increase in homicide when guns are present in the home.\(^20\)
