Support if the government conducted a referendum

If the government would conduct a referendum on a final status agreement based on the following principles:

- Two states for two peoples: A Jewish state (Israel) and an Arab state (Palestine)
- Secure and recognized border based on the 1967 lines with agreed and equivalent land swaps
- A just, agreed, fair and realistic solution to the Palestinian refugee issue, based on compensation and achieved with the involvement of the international community, including providing alternatives for a permanent place of residency and recognition of suffering, while keeping the principle of two states for two peoples.
- Jerusalem will be recognized as the capital of both states, and access to the holy sites will be kept in accordance with the existing status quo.
- Israel's security demands will be considered in a process at the end of which Israel's control over Palestine will end. The agreement will make sure that Israel will be able to defend itself effectively and that the Palestinian state will be able to provide protection to its citizens within a demilitarized sovereign state
- An end to the conflict and to all claims, normalization of the relationships with Arab states and enhanced regional security laid out by the Arab Peace Initiative
