Dear Ursula von der Leyen, President of the European Commission, 
Frans Timmermans, Vice President of the European Commission, 
Valdis Dombrovskis, Vice President of the European Commission, 
Paschal Donohoe, Minister of Finance of Ireland, 
Bas Eickhout, Member of the European Parliament, 
Sirpa Pietikäinen, Member of the European Parliament,

The European Union is finalising a law (known as the “Taxonomy Regulation”) that will require financial markets to be transparent about the kind of investments they are making. The law enables the EU to establish science-based criteria for what kind of investments can be marketed as “environmentally sustainable”. Far from limiting anyone’s “freedom” to invest, the new regulation will simply defend people’s right to know how their money is being used.

This effort to stem greenwashing and improve the sustainability of our economy is admirable and a unique opportunity that is needed now more than ever.

We call on you as our national ministers, MEPs and commissioners to support the following amendments to the Taxonomy Regulation in order for the law to have an optimal impact on addressing the climate and environmental emergency:

1. **Scope and full disclosure requirements** | Articles 1 and Article 4 of the Regulation should be broad in scope to ensure that all financial market participants are obliged to report on the extent to which all of their investments are compliant with the “environmentally sustainable” criteria developed by the EU, and cannot continue selling a financial product as sustainable if it cannot satisfy the science-based criteria developed by the EU.

2. **Adoption date** | Given the urgency of the climate crisis, the law should ensure that the climate taxonomy enters into force before the end of 2020. We cannot afford to delay such action as investments are badly needed.

3. **Social safeguards** | Investing in environmental projects must also respect the highest social standards. It’s for this reason that we call on you to amend Article 13 so that the Commission is obliged to develop a Delegated Act that outlines how investors must ensure that social safeguards are being respected.

4. **Science-based criteria, no political interference** | We demand that the lists of economic activities, and relative thresholds that define what is environmentally sustainable, are determined according to the best available science and not by political or economic vested interests. As a result, we demand that the activities and the thresholds are implemented via Delegated Acts and not Implementing Acts.

5. **Full taxonomy** | The taxonomy should be extended to categorise key economic activities from the most to the least sustainable, like the EU energy efficiency label does, to provide transparency on their degree of sustainability.

Yours Sincerely,
WWF,
Ester Asin, CEO
