

Applications

The AM-703 span adjustment module changes non-standard current and voltage signals into a 2 to 10 Vdc signal.

The AM-704 modulation interface converts signal input from a pulse-width modulated input signal to an analog 2 to 10 Vdc signal.

The AM-705 and AM-706 positioners are used for remotely controlling proportional actuators. The AM-705 is for surface mounting. The AM-706 is for flush mounting.

The AM-708 500 ohm resistor converts a 4 to 20 mA signal to a 2 to 10 Vdc signal.

AM-703

AM-704

AM-705

AM-706

AM-708

Features

AM-703

- Zero offset of 0 to 18 Vdc
- Span range of 2.6 to 17 Vdc
- Will accept 4 to 20 mA signal

AM-704

- Four input pulse clock rates
- Optically isolated input signal
- Linear analog output has 256 steps of resolution
- Diagnostic LEDs

AM-705 and AM-706

- Control range is 0 to 100% of the actuator rotation angle
- Control signal is switchable from 0 to 10 Vdc to 2 to 10 Vdc
- AM-705 is surface mount, AM-706 is flush mount

AM-708

- Hook up wires are pre-stripped
- Resistor is covered with shrink-wrap tubing

Specifications

AM-703	Power Supply	Supply Voltage:	24 Vac $\pm$ 15% 24 Vdc $\pm$ 15%
	Power Consumption	<1 Watt	
	Transformer Sizing	1 VA	
	Input Voltage:	Max voltage:	25 Vdc
		zero (starting point)	0 to 18 Vdc
		Span adjustment:	2.6 to 17 Vdc
		Impedence:	400 Ω
	Output	0 to 20 mA	
		Impedence:	500 Ω
		Voltage:	2 to 10 Vdc
	Electrical Connection	Current:	15 mA max
		Wire terminals, 14 gauge max.	
	Ambient temperature	-20 F to 150°F (-30 to 65° C)	
	Humidity	5 to 95% RH non-condensing	
	Mounting	Snap-Track (provided)	
	Dimensions	Board:	1-3/16" x 2-3/16" x 9/16"
		W/ snap-track	1-7/8" x 2-3/8" x 15/16"
	Weight	0.9 oz.	

AM-704	Power Supply	Supply Voltage:	24 Vac $\pm$ 15% 24 Vdc $\pm$ 15%
	Power Consumption		<1 Watt
	Transformer Sizing		2 VA
	Input		
	-Isolation		Optically isolated (when wired as such)
	-Type		Normal or triac, jumper selectable
	-Trigger level		12 to 24 Vac/Vdc or dry contact to com
	-time between trigger pulses		12.5 milliseconds minimum
	-Impedance		Vac - 500 Ω , Vdc - 10 Ω
	-Pulse duration/resolution		Four selectable ranges, in seconds or dry contact or SSR closure $\pm$ 40% of signal increment
	-Range 1		0.0235 to 6 seconds/in 0.0235 sec increments
	-Range 2		0.0196 to 5 seconds in 0.0196 sec increments
	-Range 3		0.1 to 25.5 seconds/ in 0.100 sec increments
	-Range 4		0.59 to 2.93 seconds/ in 0.0092 sec increments
AM-705, AM-706	Output	Voltage:	2 to 10 Vdc
		Current:	15 mA max
		Accuracy:	$\pm$ 2%
	Electrical Connection		Wire terminals, 14 gauge max.
	Ambient temperature		-20 to 150°F (-30 to 65° C)
	Operating Humidity		5 to 95% RH non-condensing
	Mounting		Snap-Track (provided)
	Dimensions	Board:	2-3/16" x 2-3/16" x 9/16"
		W/ snap-track	2-3/8" x 2-1/4" x 15/16"
	Weight		1.5 oz.
AM-708	Power Supply		24 Vac $\pm$ 20%, 50/60 Hz, 24 Vdc $\pm$ 10%
	Transformer Sizing		1 VA
	Control Signal Y		0 to 10 Vdc, 2 to 10 Vdc (switchable)
	Power Output		Up to 10 actuators (1 mA max)
	Degree of Protection		AM-705 only NEMA 4 (IP54)
	Connection		Terminals (14 gauge wire max)
AM-708	Humidity		5 to 95% RH non-condensing
	Resistance		500 Ω
AM-708	Length		9"

Installation

AM-703

Set the circuit board jumper to fit the application.

Figure-1 Jumper Settings.

The AM-703 may also be used to sequence several actuators from one signal source. This is done by adjusting multiple modules to work at different input ranges. (Example: 2 to 5 Vdc, 5 to 8 Vdc, 8 to 11 Vdc, etc.)

Calibration

- 1. Attach a variable signal source to the AM-703 input and power wires.
- 2. Apply power.
- 3. Input the minimum signal level.
- 4. Adjust the offset potentiometer to produce a 2 Vdc signal at the output. A clockwise rotation of the potentiometer screw will increase the output signal. See Figure-2.
- 5. Input the maximum signal level.
- 6. Adjust the span adjustment to produce a 10 Vdc signal at the output. A clockwise rotation of the potentiometer screw will increase the output signal. See Figure-2.
- 7. Double check the input-output calibration and install.

Figure-2 Calibration Adjustments.

AM-704

- 1. Set the input pulse timing jumpers.

Figure-3 Timing Jumper Settings.

2. Set input jumper for normal or triac.

Figure-4 Input Jumper Settings.

NOTE

Do not move the adjustment screws for zero and span.

AM-705

1. Remove the two screws from the front cover.
2. Remove the front cover and position rear cover for mounting.

Figure-5 AM-705 Mounting.

3. Use two mounting screws (customer supplied) and appropriate drill to drill and mount the rear cover (Figure-6).
4. Punch out a plug to route wiring into box. Two screw-in caps are provided.
5. Connect wires (Figure-13) and set output switch to either 2 to 10 Vdc or 0 to 10 Vdc (Figure-8).
6. Secure front cover with screws removed in step one.

Figure-6 AM-705 Mounting Dimensions.

AM-706

To mount the AM-706 positioner use the following dimensions:

Figure-7 AM-706 Mounting Dimensions.

1. Drill the three holes (Figure-7).
2. Set the output to 2 to 10 Vdc or 0 to 10 Vdc (Figure-8).

Figure-8 AM-706 Output Switch Settings.

Figure-9 AM-706 Mounting.

3. Rotate the dial until the percent sign is at the bottom. Pry the dial out with a flat screwdriver. A slot at the top of the dial is provided.
4. Remove the two screws from the front cover plate and separate the cover from the circuit board (Figure-9).
5. Position the circuit board behind the mounting surface. The wire screw terminals should be at the bottom.
6. Position the front cover plate and secure it to the circuit board with the two screws removed in step 4.

NOTE

The dial has a sealing O-ring for moisture resistance. A thin gasket may be placed between the front cover plate and the mounting surface.

7. Connect wires (Figure-13).

AM-708

The wires of the AM-708 can be attached using whatever means is acceptable to the application. This includes: wire nuts, soldering, crimp connections and screw terminals.
