The TTW® Models Feature:

■ ENERGY STAR® Qualified—Some models qualify for the September 1, 2010 minimum ENERGY STAR® EF requirement, as well as most utility rebate programs.

■ Bradford White ICON System™—Intelligent gas control with spark to pilot ignition system eliminates the constant burning pilot. This results in savings of pilot gas during standby periods (120 V.A.C.).
  - Enhanced Performance—Proprietary algorithms provide enhanced First Hour Delivery ratings and tighter temperature differentials.
  - Advanced Temperature Control System—Microprocessor constantly monitors and controls burner operation to maintain consistent and accurate water temperature levels.
  - Intelligent Diagnostics—An exclusive green LED light prompts the installer during start-up and provides ten different diagnostic codes to assist in troubleshooting.

■ Power Vented Water Heater—Designed for installations where atmospheric units cannot be used. Exhaust gases are vented under positive pressure directly out of the building through the roof or the wall.

■ Powerful Blower Motor—Our significantly quiet design has greater resistance to outside winds and the power to vent in many difficult venting situations.

■ Horizontal and Vertical Venting—PVC, ABS or CPVC (Maximum equivalent vent length on reverse side).

■ Advanced ScreenLok® Technology Flame Arrester Design—Flame arrester is designed to prevent ignition of flammable vapor outside of the water heater (excluding RG1PV55H6N & RG2PV75H6N).

■ Flammable Vapor Sensor—Electronic sensor prevents burner operation if flammable vapors are detected. The sensor will also prevent operation if there is ongoing flammable vapor burn inside the combustion chamber (excluding RG1PV55H6N & RG2PV75H6N).

■ Maintenance-Free—No regular cleaning of air inlet openings or flame arrester is required under normal conditions (excluding RG1PV55H6N & RG2PV75H6N).

■ Sight Window—Offers a view into the combustion chamber to observe the operation of the pilot and burner.

■ Factory-Installed Hydrojet® Total Performance System—Cold water inlet sediment reducing device helps prevent sediment build-up in tank. This increases first hour delivery, while minimizing temperature build-up at top of tank.

■ Vitraglas® Lining—Bradford White tanks are lined with an exclusively engineered enamel formula that provides superior tank protection from the highly corrosive effects of hot water. This formula (Vitraglas®) is fused to the steel surface by firing at a temperature of over 1600°F (871°C).

■ Non-CFC Foam Insulation—Covers the sides and top, reducing the amount of heat loss. This results in less energy consumption, improved operation efficiencies, and jacket rigidity.

■ Water Connections—3/4” NPT factory-installed true dielectric fittings.

■ 3/4” NPT Side Connections—(RG2PV50H6N, RG1PV55H6N, and RG2PV75H6N only).

■ Factory-Installed Heat Traps—Design incorporates a flexible disk that reduces heat loss in piping and eliminates the potential for noise generation.

■ Protective Magnesium Rod—(RG1PV55H6N has 2).

■ T&P Relief Valve—Installed.

■ Low Restriction Brass Drain Valve—Durable tamper-proof design.

### Propane Models

Propane models feature a Titanium Stainless Steel propane burner. For Propane (LP) models change suffix "N" to "X". For 10 year models, change suffix from "6" to "10". Based on manufacturer's rated recovery efficiency. 110 VAC Required for Power Venting / 110 VAC 60HZ 3.1 Amperes.

### Energy Factor and First Hour Rating

Energy Factor and First Hour Rating is based on the latest AHRI directory listings.

**★ = ENERGY STAR® Qualified.**

### Dimensions and Specifications

Dimensions and specifications subject to change without notice in accordance with our policy of continuous product improvement.

### Suitable for Water (Potable) Heating and Space Heating

Tough chemicals, such as those used for boiler treatment, shall NEVER be introduced into this system. This unit may NEVER be connected to any existing heating system or component(s) previously used with a non-potable water heating appliance.

### General

All gas water heaters are certified at 300 PSI (2068 kPa) test pressure and 150 PSI (1034 kPa) working pressure. All water connections are ¾" NPT (19mm), all gas connections are 1" (13mm). All models design-certified by CSA International (formerly AGA/CGA), ANSI Z-21.10.1 and/or 10.3 and peak performance rated.
