

SmartSave

ENERGY MANAGEMENT FOR A SMARTER ENERGY FUTURE

Be a part of Bryant's SmartSave Program

Energy Management Made Easy

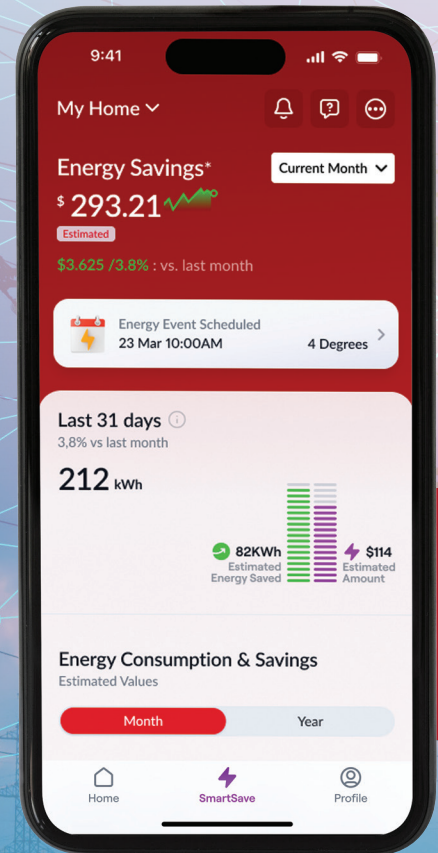

Remember when energy management at home meant turning back your thermostat whenever you wanted to save a little on your heating and cooling bill? Now, you can do it automatically with SmartSave. SmartSave makes it easy to save energy and earn rewards, upon enrollment and continued annual participation, while keeping you in control of your comfort.¹

Why is energy management so important?

There's a reason why energy management is such a hot topic: heating and cooling accounts for nearly half of the energy used in most homes.² And as weather becomes more extreme, comfort demands grow, electric grids are pushed to the limit, and power outages become more common.

Managing energy from its point of generation to its point of use is the key. That's why Bryant created SmartSave. Because reducing energy usage helps lessen environmental impact while supporting grid resiliency. By participating, you and your neighbors collectively may help reduce utility provider reliance on "peaker" plants. Peaker plants may be used by your utility provider during peak demand and typically emit more pollution to the environment than other power plants.

How to Make an impact with Bryant SmartSave

With just a minimal change to your Bryant comfort system, you can make an impact – with SmartSave. SmartSave makes incremental changes at times determined by your local utility to reduce energy use, and help you contribute to grid resiliency.

How SmartSave Works

With simple setup and operation through the Bryant SmartHome app, SmartSave responds to periods of peak power usage and automatically makes small, temporary changes to your comfort system based on your personalized adjustment parameters.

Of course, it's your home, so you are always in control. In most cases, you will receive advance notification of a SmartSave event via the Bryant SmartHome app. You can adjust your thermostat to your desired comfort level at any point from the thermostat or the Bryant SmartHome app at the start of or during an event.¹

Sign Up Now for an Energy-saving Future with SmartSave

When you have a Bryant Smart Thermostat or Evolution™ Connex™ System Control³, joining SmartSave couldn't be easier. Simply enroll on your smartphone through the **Bryant SmartHome** app.

Opting into the program means you are consuming less energy and putting less strain on the grid, all while earning rewards upon enrollment, and continued annual participation.¹

Manufacturer reserves the right to discontinue, or change at any time, specifications or designs without notice or without incurring obligations.

¹ SmartSave occasionally adjusts your thermostat set point or HVAC system up to four degrees, while giving you the flexibility to reset your thermostat to your desired comfort level at any point from the thermostat or the Bryant SmartHome app. Reducing energy usage during higher rate, peak demand periods contributes to electricity savings on your utility bill. Savings and ability to save energy may vary depending on your location, utility provider, home, equipment, weather, and other factors. Continued participation is required for ongoing incentives. Program and incentives are subject to change. See Program Terms & Conditions for complete details.
