TrueStart®
Hot Surface
Igniters

Extended Warranty

In-store merchandiser holds 18 igniters and drives sales. Can be used as a stand alone floor display or use with the tray on a shelf or counter.

Silicon carbide ignition is a very old technology that was used by manufacturers for many years. While inexpensive these igniters are very fragile and are easily damaged or broken.

Silicon nitride igniters are the newer technology products that have been used by most major manufacturers for the last twenty years. These igniters are much more durable and can actually be dropped from a fair height without fear of damage or breaking. Silicon nitride igniters can be used to replace the older carbide igniters but the reverse should never be done.

TrueStart offers a wide range of both silicon nitride and carbide igniters. These are available as direct replacement models for various OEM's or in "universal" kits that replace hundreds of models.

Silicon Nitride Igniters
