

Arm & body PPE care guide

Regular washing helps remove sweat, dirt, oils, and contaminants that can build up during the workday, and many PPE items can be easily washed right on site.

Washing instructions:

Option 1: Machine wash

Wash on a regular cycle using cool water. We recommend that you turn the item inside out to minimize scratching the tub of the washer. Do not bleach.

Option 2: Hand wash

Hand wash using mild semi-diluted cleaner and scrub until clean. Rinse thoroughly.

Drying instructions:

- Tumble dry inside out on low setting or hang to dry (indoors). Do not iron.
- Store in clean, dry conditions, away from direct sunlight or extreme temperatures

*We recommend washing HexArmor® Arm & Body PPE in water that is 86° F (30° C) or less. However, they may be washed in water up to 140° F (60° C) without any significant decrease in longevity or performance of the product. As always, inspect your PPE on a regular basis.

Disclaimer:

Laundering/washing HexArmor® hand and body protection is generally not recommended because it is not known if this will impact product performance. Performance retention after laundering or washing is not guaranteed and is variable depending on the cleaning methods used, detergent type, and conditions the products were exposed to during use. HexArmor® products are not certified or tested for compliance after laundering/washing. Laundering/washing does not restore worn or damaged materials. Users must inspect PPE before each use and replace if performance is compromised. Continued use after laundering/washing is at the user's own risk. For North American markets only.
