

MICRO-PLUS®

Complete Inline Filtration & Treatment for Ice Machines,
Coffee Urns and other equipment

1/4" PT tapping permits use of
flare or compression fittings,
or Quick-Disconnect plugs.

- Eliminate lime scale formation
- Remove silt, sediment and other suspended matter
- Remove chlorine and other objectionable tastes and odors

Nu-Calgon
Wholesaler, Inc.

MICRO-PLUS[®]

FILTER *plus* FEEDER

Manufactured with 1/4" FPT tapping that allows for easy installation with flare or compression fittings. 1/4" or 3/8". The 1/4" tapping also accepts the standard QC plug for installation

20 micron polyethylene disk pre-filters water prior to entering unit.

Constructed of polypropylene material which meets FDA and NSF standards for use in drinking water systems.

Deflector is designed to direct the water flow evenly across the filter bed. It also eliminates the potential for channelling.

FDA-approved food grade hexametaphosphate crystals which slowly dissolve into the water and inhibit the formation of lime scale. This is done by stabilizing the hardness minerals so they do not precipitate and form deposits.

Special blend of a highly absorbent activated carbon with the ability to absorb larger amounts of chemicals such as chlorine and ammonia so that there is no unpleasant taste or odor in water.

High density polyethylene filter disc traps suspended particles as small as 20 microns.

Eliminating the problems associated with the water used in ice machines, coffee urns and brewers, beverage machines, and other equipment or systems such as humidifiers, steamers, etc. is what the MICRO-PLUS[™] Treatment system is all about.

It's a **FILTER** . . . Objectionable tastes and odors are eliminated. Large amounts of chlorine and other chemicals that cause this condition are removed through the use of a special virgin blend of high grade activated carbon. And, silt and sediment particles, even as small as 20 microns, are trapped and held by specially designed filter and screen discs.

It's a **FEEDER** . . . The Micro-Plus System contains 6R Micromet[®], a specialized, slowly soluble, food grade phosphate that feeds into the water supply stabilizing the hardness minerals contained in the water thereby eliminating scale formation. Maintenance costs, due to scale buildup in orifices, valves, etc., are reduced. In addition, the 6R Micromet is NSF certified.

It's **MORE** . . . The Micro-Plus[™] System offers a choice of four convenient sizes. And when properly sized, Micro-Plus[™] treatment will last up to six months.

APPLICATIONS

Number	Systems	Connections*	TREATMENT CAPACITIES		
			Gallons of Water per Day	Ice Makers	Coffee Makers
4615-W3	MICRO-PLUS 2	1/4" FPT	12.5	Up to 125 lbs. of ice per day	25 lbs. of coffee (1,250 cups) per wk
4612-W3	MICRO-PLUS 4	1/4" FPT	25	Up to 250 lbs. of ice per day	50 lbs. of coffee (2,500 cups) per wk.
4613-Y8	MICRO-PLUS 8	1/4" FPT	50	Up to 500 lbs. of ice per day	100 lbs. of coffee (5,000 cups) per wk.
4614-Y8	MICRO-PLUS 16	1/4" FPT	100	Up to 1000 lbs. of ice per day	200 lbs. of coffee (10,000 cups) per wk.

*This connection allows for the selection and use of compression or flare fittings, or "quick-disconnect" plug fittings.
