

Poly-Air Activated Carbon Vent Cover

Polylok's Poly-Air Activated Carbon Vent Cover is a carbon filter that can remove offensive odors such as Hydrogen Sulfide as they come out of the roof vent. Use our filter to eliminate these unpleasant odors.

The Problem: Sewer and septic tank odors are a big problem for some homes. Vents on the roof allow the pressure to equalize as waste water flows down through the drain pipes. Without a vent system, your sinks, tubs, toilets would gurgle and drain slowly. Often, wind currents cause these odor problems. As wind blows over the house, the air currents that are supposed to carry the gases up and away can carry sewer gas down into the living areas.

The Solution: Polylok's Poly-Air can prevent the odor problem by removing offensive odors such as Hydrogen Sulfide as they come out of the roof vent.

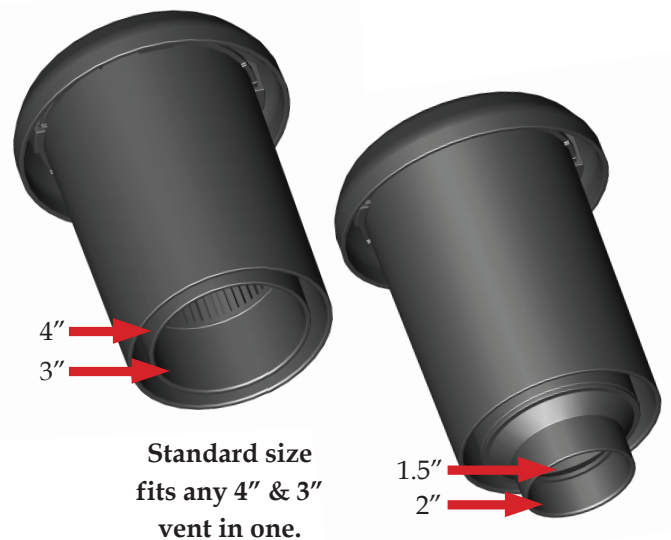

Features & Benefits:

The Poly-Air Activated Carbon Vent Cover is manufactured to fit your existing pipe. Our standard size vent cover will fit 4" & 3" vents. The Poly-Air will also fit 2" and 1.5" vents with our optional vent reducer.

Polylok's Poly-Air is your answer to eliminate septic odors. They are inexpensive and can be easily installed on existing vents. Put an end to unpleasant odors from your house or portable toilet vents.
