

599 Series Zone Valves and Actuators— Modulating, On/Off Spring Return, 2-Position Control

Description

Typical hot and chilled water applications include: radiators, floor heating via manifolds, fan coil units, unit ventilators, and VAV terminal boxes.

- Actuator determines valve action: normally-open (NO) and normally-closed (NC) installations utilize the same valve body.
- No piping mix-ups, simpler designs, and less chance for errors.
- SSA/SSP model actuators and SFA/SFP model actuators have a manual override feature.
- All actuators are interchangeable: Any valve can be used with any actuator.
- All valves have metal-to-metal seats, more reliable than rubber paddle valves.
- Three-way valve porting is designed to simplify OEM piping packages.
- Three-way valve has a flow restrictor for balancing purposes, which saves the cost of a balancing valve.
- Factory leak testing easily accomplished with actuator removed.
- Low ANSI Class III leakage.
- Cold working pressure: 800 psi.
