

## Lab and Pressurized Room Controllers with Off-board Air Modules

**Lab Controller Module.**

**Off-board Air Module 550-819B.**

The Laboratory Control Modules (LCMs) and Pressurized Room Controllers (PRCs) are available on a new hardware platform. These controllers use the Off-board Air Module (OAM) to measure airflow for standard and custom pressurized room control applications.

### NOTE:

The 550-767.xN laboratory controllers have new 29xx application numbers. New application numbers may require front-end graphics and reporting modifications. Upgrading to the new controllers might, in some rare instances, cause some programming rework.

### Lab Controller Module

The LCM operates as an independent, stand-alone DDC controller and can be connected on the Floor Level Network (FLN). The LCM includes the largest physical point count of any FLN device. Not all physical points are used in all applications.

### Off-board Air Module

The OAM contains the air velocity sensor (a specialized differential pressure transducer), V/F conversion circuitry and solenoid for auto-zero function. Advanced digital signal processing produces a highly accurate reading of even the noisiest flow signals.

The auto-zero solenoid connects to the air velocity pressure transducer's inlet ports to enable automatic periodic re-calibration. This re-calibration ensures accurate, drift-free airflow measurement. Automatic re-calibration of the differential pressure transducers occurs upon system power-up and when airflows are stable with frequency selectable from 1 to 6 times a day.

**NOTE:**

Enhanced 550-767xN laboratory controllers **must use 550-819B** Off-board Air Modules (OAM). Using 550-818B with enhanced 550-767xN controllers will not work. 550-818B OAM are to only be used for legacy 550-767x controllers.

## Features

- Enhanced Room Unit functionality, including room humidity and CO<sub>2</sub> monitoring for 550-767xN controllers.
- Enhanced Room Unit functionality, including improved handling of communication losses and thermistor input selections 550-767xN controllers.
- LCM can be factory mounted on terminal units or Venturi Air Valves, or field mounted in panels located for easier access.
- OAM factory mounted on terminal units or Venturi Air Valves eliminates field installation of airflow signal tubing.
- Control applications available for a variety of airflow control devices, including dampers, terminal units, fans with VFDs and Venturi air valves.
- Control applications using a variety of actuation types including high-speed electronic, low-speed electronic and pneumatic (with transducers).
- Control applications that do not use a general exhaust, does not require a second OAM.
- Airflow sensor is read five times per second, independent of the output device loop time, giving the most accurate reading at all times.
- Airflow sensor is automatically recalibrated periodically to maintain highest accuracy.
- BTU Compensation temperature control application allows tighter control without over-cooling or over-heating during transients (requires discharge temperature sensor).
- Supports the use of wall switch input to change from occupied to unoccupied state.
- Optional room pressurization alarm output to notify laboratory occupants.
- Reports airflow directly in actual CFM (LPS).
- Electrically Erasable Programmable Read Only Memory (EEPROM) used for storing control parameters—no battery backup or re-entry of data required.
- Quick return from power failure without operator intervention that maintains room pressure relationship.

- Maintains room pressurization during transient conditions.
- Plenum rated controller.
- User-adjustable offset for the calibration of room temperature reading when required for validation purposes. See *Application Information*.
- Secure Mode prevents unauthorized users from making changes to the TEC through the MMI port or room sensor, supporting FDA 21 CFR Part 11 compliance guidelines for protection of electronic records. See *Application Information*.

## Room Sensor/Room Unit

The room sensor connection to the controller board consists of a quick-connect RJ-11 jack. This streamlines installation and reduces controller start-up time.

## Combination Temperature, Carbon Dioxide, and Relative Humidity Models

The Series 2200/2300 range of room unit, usable with the LCM/PRCs, includes temperature only or combination temperature/humidity, temperature/CO<sub>2</sub>, or temperature/CO<sub>2</sub>/humidity models. For these models, all measurement variables—CO<sub>2</sub>, temperature and relative humidity values—are passed digitally to the LCM/PRC. This information is passed from the room unit through the RJ-11 cable to the RTS port on the LCM/PRC.

**NOTE:**

A CO<sub>2</sub> power module (product number AQM2200) is also needed for the CO<sub>2</sub> sensor option to function.

## Lab and PRC Specifications

|                                                     |                                 |
|-----------------------------------------------------|---------------------------------|
| Dimensions                                          | 4-1/8" W × 11-1/4" L × 1-1/2" H |
| Weight                                              | Approx. 3 lbs (1.35 kg)         |
| Controlled Temperature Accuracy, Heating or Cooling | ±1.5°F (0.9°C)                  |

## Document Information

| Description                                         | Product Part Number |
|-----------------------------------------------------|---------------------|
| Fume Hood Controller Variable Air Volume            | 149-245             |
| Fume Hood Controller Constant Volume, 2-state (CV2) | 149-947             |
| Venturi Air Valves                                  | 149-425             |
| Conical Venturi Air Valve for Critical Environments | 149-524             |
| Venturi Air Valve Accessories                       | 149-495             |
| Laboratory Room Single Duct Supply Air Terminal     | 149-319             |
| Laboratory Exhaust Air Terminal                     | 149-320             |
| Laboratory Room Dual Duct Supply Air Terminal       | 149-338             |
| Laboratory Airflow Station                          | 149-317             |
| Laboratory Electronic Actuator Submittal Sheet      | 155-771             |
