

# VersaFlex® Non-Shared Diverter

## Not Sharing is Caring!

Versatility that saves water, cuts energy costs, and meets code.

With the **Symmons VersaFlex Non-Shared Diverter**, you can switch your shower valve to another function without sharing or wasting water in the process. Why is that important? Well, some areas now require it by code as a water-saving measure. Switch it up to whichever shower experience you want—showerhead, hand shower, or tub spout—depending on your mood or your needs.

The VersaFlex valve puts the control of your shower functions within reach, right on the valve itself, so you don't need a secondary diverter valve or diverter tub spout. And there's less piping, less hardware, and less holes in your shower wall, making installation easier, faster, and less expensive.

**CLEAN  
AND EASY!**

The Temptrol VersaFlex valve eliminates the need for a secondary diverter valve and trim, which means less clutter on your shower wall, less piping work, and a cleaner installation!

**RESPECT  
THE CODE!**

Switch between a showerhead and hand shower, showerhead and tub spout, or tub spout and hand shower without wasting valuable water and energy costs.

**LEGIT TO  
RETROFIT!**

The Non-Shared Diverter cartridge can be installed in any Temptrol VersaFlex valve body with no modifications! And it's a genuine Symmons part, so you know *it's made right*.
