Information

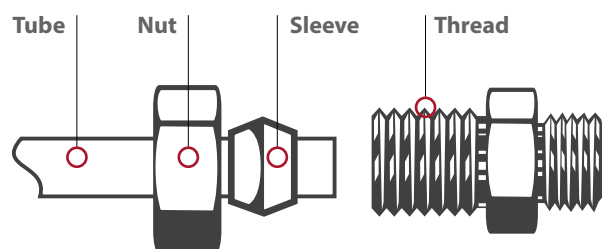

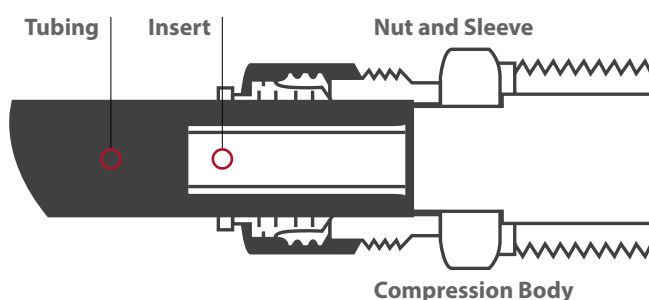

Tribal brass compression fittings are ideal for use with copper, brass, aluminum or plastic tubing and are commonly used on gasoline, grease, oil, water, vacuum and air lines. Tribal compression fittings are not recommended for use with steel tube. Tribal offers a wide variety of compression fittings including our Ander-Lign/Poly® universal compression fittings with brass inserts.

The Ander-Lign/Poly universal compression fitting is the only brass compression fitting that can be used with almost any type of tubing. The Ander-Lign/Poly universal compression fittings come completely assembled with the brass insert and captive sleeve. The bodies are interchangeable with standard compression fittings. The Ander-Lign fitting puts 360° of even pressure on the tubing, ensuring a tight seal.

Specifications

Temperature: -65°F to 250°F

Working Pressure: Temperature and type of tubing must be considered for proper fitting selection. The following is based on 70°F with copper tube.

Installation Instructions

Cut tubing square on the end. Start tubing on the insert side and slide into the fitting until it hits the stop. Wrench tighten approximately 1-1/2 to 2 turns beyond hand tight. **Do not over tighten.**

Information

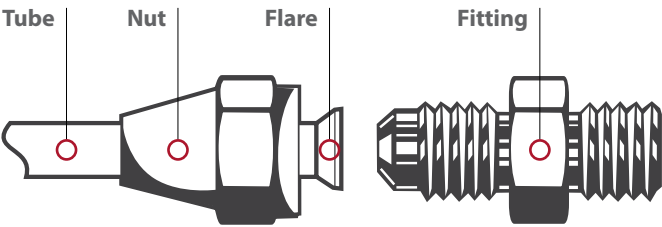

Tribal offers a wide variety of flare fittings including Standard 45°, Inverted 45°, POL, Gas Range, and Fine Thread (9/16" x 24) for space heater applications.

Flare fittings are designed for higher pressure applications and are commonly used for gasoline, grease, oil, water, vacuum, air lines, L.P. and natural gas. Flare fittings can also be used for refrigeration, air conditioning and other applications involving hard-to-hold liquids and gases using forged nuts.

Recommended for use with copper, brass, aluminum and welded steel hydraulic tubing that can be flared. Not recommended for use with polybutylene or soft plastic tubing.

Specifications

Temperature: -65°F to 250°F
Working Pressure: Temperature and type of tubing must be considered for proper fitting selection.
The tables below are based on 70°F with copper tube. POL and Gas Fittings have a maximum working pressure of 250 psi.

Installation Instructions

Cut tubing square and put nut onto tubing. Flare tubing with 45° flaring tool and hand tighten nut over flare and onto fitting body. Wrench tighten for positive metal-to-metal seal. **Do not over tighten.**

Information

Tribal offers a wide variety of pipe fittings and nipples. Nipples are available in a variety of lengths and thread sizes; fittings are offered in a number of configurations using both male and female pipe threads. Many popular pipe fittings are offered in both barstock and cast materials. All tapered pipe threads are manufactured to the highest quality standards and tolerances.

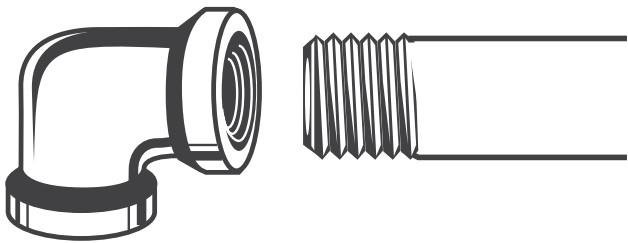

Tribal pipe fittings and nipples are recommended for use with brass, copper or iron pipe. They are commonly used on oil, natural gas, water and air lines.

Specifications

Temperature: -65°F to 250°F
Working Pressure: 1,000 psi on all barstock fittings and 125 psi on all cast fittings at the temperature range stated above.

Installation Instructions

Place Teflon® tape on the male pipe threads and screw the thread into the female fitting until threads stop and the connection becomes tight. **Do not over tighten.**

Information

Tribal offers a variety of styles of hose barb fittings including elbows, tees and adapters. Hose barb fittings can be used with any tubing soft enough to accept a clamp style connection, including vinyl and rubber.

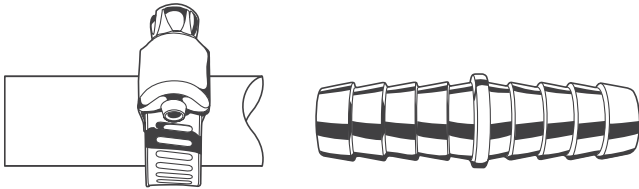

Installation Instructions

Cut tubing square and slide hose clamp onto the hose end. Push the barbed fitting into the hose until the end of the hose reaches the hex or stop ring. A non-petroleum lubricant may be used to assist in inserting the fitting into the tube. Move hose clamp over hose and barb and tighten the clamp with the appropriate tool (depending on the style of clamp) until a positive connection is made. **Do not over tighten.**

Specifications

Temperature: -40°F to 160°F

Working Pressure: 150 psi. Do not exceed the recommended pressure rating of the tubing used.

Information

Tribal Garden Hose Fittings are ideal for use with any standard garden hose (3/4"). Many garden hose fittings are offered in standard adapter and connector styles as well as a swivel model. The swivel garden hose fittings allow the hose to spin freely of the threaded connection; preventing accidental disconnection as well as hose binding and kinking issues.

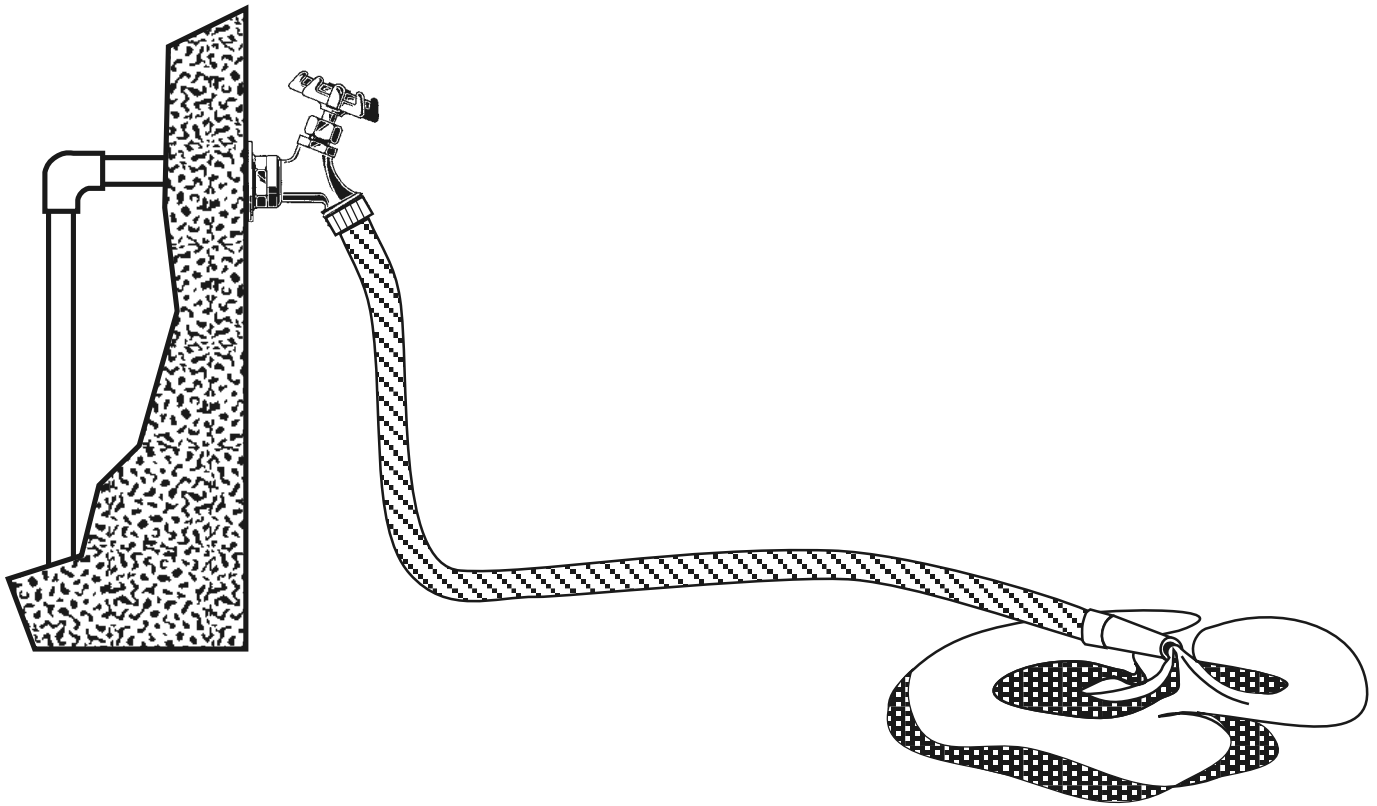

Specifications

Temperature: -35°F to 100°F

Working Pressure: 75 psi. Do not exceed the recommended pressure rating of the garden hose.

Installation Instructions

Thread the male end connection onto the female threaded fitting until a hand tight connection is made. **Do not over tighten.**

About the Tribe

Tribal invents parts. We make parts. We market parts. But, Tribal is more than the sum of its parts. We are a tribe. And, we don't just fight for your business – we fight alongside you, to help you win new customers and grow your business. When you choose Tribal, you join our tribe and we join yours.

Who is the Tribe?

Tribal is a highly automated, quality-focused inventing, machining and manufacturing company with a remarkable infrastructure and equipment list. More important, Tribal is good people. In a time when most other companies like Tribal have shut their doors or moved their operations, Tribal stands resolute. We are proud to serve you as a quality manufacturer in the heart of Michigan, USA.

Why join the Tribe?

Tribal understands that businesses are built on reputations, and they are not built overnight. To build your business, you first build your reputation. Your success was built one brick, one sale at a time. We understand that struggle and want to assist you with it, to help your business grow into the future. When you choose Tribal, you hire the tribe.

What is the Tribe?

Tribal is one of the most efficient and capable machining operations in the world, giving us world class quality and world class pricing. We are fast and automated due to our multi-generational industry experience and impressive fleet of equipment. We are also nimble and can master smaller orders, customized parts and fast turn-around times for new product and project development. We are cost efficient. We have low overhead to help control costs. Nevertheless, we still have an innovative development staff that allows us to add value to your organization with new ideas and value engineering.

Why the name Tribal?

We like the idea of partnerships. It is in God's plan, we believe, that man is able to achieve more working together than he is alone. Whether it is through a family or a company or a country or a tribe, when we work together on a common cause, great things can happen ...and rather quickly too. This basic idea makes sense to us. It is what we want for those who work at Tribal. It is what we want for our customer relationships. We want great things to happen for you. And — we liked the name!

Marshall, Michigan Production Facility Overview

Tribal operates an ISO 9001:2015 production facility in Marshall, Michigan, that manufactures quality straight and directional-machined parts and fittings, as well as the assemblies created from those parts, staffed by 100 employees. The operation has been ISO certified for more than 15 years and has never experienced a major non-conformance. Tribal also holds numerous certifications and approvals with NSF, UL and CSA.

Our capabilities include: a large fleet of rotary transfers, and screw machines -1/4" – 2", CNC machining equipment, automation from bar stock to borings, as well as automated secondary equipment, annealing equipment, washing equipment, oil management equipment, packaging equipment and forgings.

Chesnee, South Carolina Production Facility Overview

Acquired in 2015, our operation in Chesnee, South Carolina is staffed by over 150 employees who are responsible for machining millions of pounds of ECO Brass, 360 Brass, 27450, as well as steel components into a full line of flare, compression, nipples and accessories. The operation also has packaging and assembly capabilities.

The Chesnee factory is ISO 9001:2015-certified, manufactures NFS listed parts, and its 160-machine fleet includes: Davenports, ACME's, New Britains, Rotary Transfers, CNC machining including Tsugami, Brown & Sharps and more.
