Contents

Welcome	2
Stay in Touch!	2
Setup	2
1 Introduction	3
1.1 Example: Linear Models	3
1.2 Principle of Optimization Transfer	4
1.3 Textbooks vs. Computers	4
2 Solving Nonlinear Equations	10
2.1 Bisection Algorithm	10
2.2 Rates of Convergence	13
2.3 Functional Iteration	14
2.4 Newton's Method	16
3 General Optimization	21
3.1 Steepest Descent	22
3.2 The Newton Direction	25
3.3 Quasi-Newton	33
3.4 Conjugate Gradient	41
3.5 Coordinate Descent	46
4 The EM Algorithm	53
4.1 EM Algorithm for Exponential Families	53
4.2 Canonical Examples	54
4.3 A Minorizing Function	56
4.4 Missing Information Principle	62
4.5 Acceleration Methods	63
5 Integration	68
5.1 Laplace Approximation	68
6 Independent Monte Carlo	74
6.1 Random Number Generation	75
6.2 Non-Uniform Random Numbers	76
6.3 Rejection Sampling	78
6.4 Importance Sampling	84
7 Markov Chain Monte Carlo	88
7.1 Background	88
7.2 Metropolis-Hastings	91
7.3 Gibbs Sampler	99
7.4 Monitoring Convergence	104
7.5 Simulated Annealing	106
