Let's start

Since you downloaded and now reading this ebook I am sure you are very curious and excited how to make online passive income. So straight at the beginning I'm telling you that it's only up to you how much you can earn.

Certainly you heard something about cryptocurrency like Bitcoin, Ethereum and others. What you maybe didn't hear is that you can make decent money with cryptocurrency and it's mining.

Nowadays, this business is profitable and you can earn interesting money, but you need to know how to do it!

You just must have the right information.

I started to do this business through a very interesting project. This project gives you everything what you need, to be profitable.

It is one of the few projects that is really suitable for everyone.

So, if you want to be introduced to a new world of opportunity... keep reading and enjoy!

Before I start to talk about the project itself, I have to explain basic information about cryptocurrency, blockchain and mining.

What exactly is cryptocurrency?

It is a virtual currency which uses cryptography to secure financial transactions. The main advantage of a cryptocurrency is that it is decentralized unlike traditional currencies (USD, EUR, etc.). Due to this fact, cryptocurrency transfers are secure, anonymous and transparent. Currently, there are over 3000 existing cryptocurrencies. Most cryptocurrencies are based on blockchain technology. Bitcoin and Ethereum are some of the cryptocurrencies which are based on blockchain.

Bitcoin is the most well-known and the largest cryptocurrency by market capitalization. It was created in 2009 by the anonymous person using a name Satoshi Nakamoto. It is considered to be the first decentralized cryptocurrency.

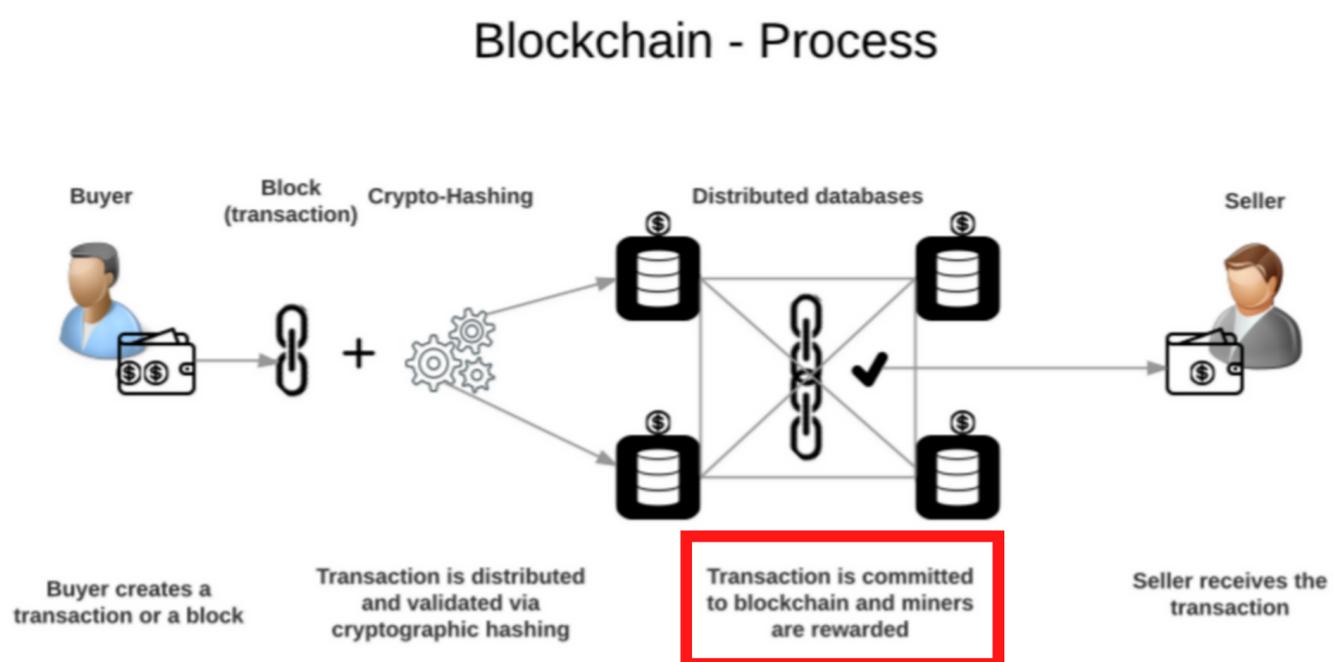

Ethereum is called “a younger brother of Bitcoin”. It is the second most well-known cryptocurrency platform.

What is Blockchain?

It is a decentralized and distributed database in the open source model. It works in a P2P network, and it is not controlled by any third party, i.e. there are no central computers and there is no centralized data storage space. It is an anonymous and verifiable ledger that anyone can access. As its name indicates, blockchain is a chain of blocks. This chain is a list of records with information which is linked thanks to cryptography.

Blockchain saves transactions in a permanent and secure way.

What is cryptocurrency mining?

It is a process in which new cryptocurrency transactions are added to the blockchain. People who are responsible for verifying this information and therefore, updating the ledger are called miners.

You may have heard already of making money by mining Bitcoins.

Remember that today you need very advanced and specialized hardware to make a significant profit by being a miner.

Unique project

And that is why I want to introduce you company which brings new way of cryptocurrency mining.

It is a unique cryptographic program that does not require so much of your activity, works 24/7/365, is highly reliable and creates it's users own passive income. It doesn't mean that you won't do anything. You still have to do something but you will like it because you can make a decent amount of money online.

This company is specialized to provide computing power and use that power for cryptocurrency mining. Here are the main benefits:

- You do NOT need to be an expert in cryptocurrency or block chain technology. This company provides data center where clients rent the computing power to mine the cryptocurrency. Anyone who wants to become a cryptominer do NOT need to physically own any device(miner).

- You decide which cryptocurrency you want to mine. You can choose from 4 digital currencies - Ethereum, Monero, Zcash, Bitcoin Cash, and according to the best market value you can choose which one you want to mine at that moment.
- You can sell your profits and activity (portfolio) at any time and simply exit the system with zero loss of your finances.
- You will get payout every week, always on Monday.
- You can withdraw your profits or reinvest and keep mining with higher computing power which means higher profits.

This project is not only about cryptocurrency mining itself. You can increase your profits with another 4 tools.

- You can control your computing power set in data center through the Application. So you have the control over your performance and you can set up your own mining. You have also access to a unique electronic wallet where you can see the value of your profits. You can reinvest your profits and get higher computing power or exchange it for your currency at any time.

But I will explain all of this in Full version of the e-book, which is focused more on practical information.

The best of all, you have access through the Mining Application on your phone from all over the world, even while you're on the move.

Everyday you will check your phone, open the app and spend about 2-5 minutes to set up your mining. After that you can enjoy your favorite activities knowing that you are earning 24 hours a day.

This business is really suitable for everyone!

Project benefits:

- You do not need to own any hardware
- You are mining crypto without knowing too much about blockchain and cryptocurrency
- Weekly payout
- You can withdraw your profits as well as your investment from the project at any time
- You have unlimited access 24/7/365

- Low maintenance costs
- NO commitment
- Simple business model for everyone
- You are building your own passive income
- Easy and clear Mining Application
- Unlimited access from all over the world
- Simple Mining System
- Free membership in an exclusive community of blockchain experts
- Work 2-5 minutes a day

Return on Investment

How much can you actually earn through this company and what can be the annual increase of your investment?

The company is providing computing power for its clients, and the profit depends on each client separately according to what steps each client makes in their own portfolio. It's a set of several factors that you can directly influence.

However, the company promised its members an annual return starting from 53%. But with the right steps, you can climb up to an incredible 135% per year.

Yes, you read that right. This is a high annual growth of your investment that you can not get offered from any other institution or bank. With this company you can raise your investment up to 135% a year. The return on investment depends on the individual capabilities of each client though. It is therefore necessary to use tools that positively impact your profit.

You are making money by cryptocurrency mining even while you're sleeping 24/7/365.

The decision is up to YOU!

In the full version of the e-book you will learn the name of this company and you will receive specific information about cryptocurrency mining and also explanation of each step from registration to mining. In the e-book I'm offering information about one of the few projects that generates online passive income and has long-term revenue potential for the future.

Nowadays the cryptocurrency business is very interesting and it's up to you if you will decide making decent money even while you sleep!

Good luck and happy mining!
