Feeling Your Center of Gravity

How to feel and control your center of gravity to make learning to balance easier

感受你的重心

如何感覺和控制你的重心會讓學習平衡變得更簡單

By changing the shape of your body (moving one part relative to another), you can change the position of your center of gravity relative to your body.

透過改變身體的形狀

(移動相關的身體部位)，

相對於身體你可以改變重心的位置。

However, if you learn to feel your foundation, you can feel where your center of gravity is located, no matter what shape you make your body.

然而，

如果學會感受承重部位，

無論身體呈現什麼形狀，

你都能感受到重心的所在。

This is actually very basic physics. (Statics and Dynamics 101). And understanding this can make it easier to balance.

其實這就是基本物理學。

(基礎靜力學與動力學)

了解這個原理讓學習平衡更容易。

Phrase 2

Using Pressure to Feel Where Your Center of Gravity Is
用壓力來感受你的重心所在

When standing, we can use our feet as pressure sensors. The weight of our body presses through the bones of our feet which compresses the skin of our feet.

站姿時，

用雙腳來感覺壓力。

用雙腳當作壓力感測器。

我們身體的重量通過腳部的骨骼壓迫我們腳的皮膚。

The greater the pressure, the greater the sensation.

壓力越大，感覺越強。

The trick to feeling where our center of gravity is with respect to our feet is noticing the point of greatest pressure. That's the point (or line) over which our center of gravity is positioned.

感覺重心所在相對於腳的位置，訣竅是注意最大的壓力點。

這就是我們重心的點(或線)所在的位置。

Phrase Set 2

Phrase 3

How to weigh a truck
如何測量卡車重量

You can figure out the weight of a car or truck by putting the front wheels on a scale, noting the weight, and then putting the back wheels on the same scale.

我們透過把前輪放在秤上。

記下重量，

接著把後輪也放在同樣的秤上，

得知汽車或卡車的重量。

If the weight is even at the front and back wheels (if both measurements show the same weight) then the vehicle's center of gravity is midway between the front wheels and the back.

若在前輪與後輪的重量是平均的(測量值顯示重量相同，

表示車輛的重心在前後輪的中間。

If the weight is different at each set of wheels, then the difference in weight can be used to calculate where exactly the center of gravity is with respect to the front and back wheels.

如果前後輪的重量不同，

那重量的差異可以用來計算重心的準確位置

We can use the same idea to position our center of gravity evenly between both feet.

我們可以用同樣的概念把重心平均地放在我們的雙腳中間。

如何測量卡車重量

我們透過把前輪放在秤上

記下重量

接著把後輪也放在同樣的秤上

得知汽車或卡車的重量

若在前輪與後輪的重量是平均的

測量值顯示重量相同

表示車輛的重心在前後輪的中間

如果前後輪的重量不同

那重量的差異可以用來計算重心的準確位置

我們可以用同樣的概念把重心平均地放在我們的雙腳中間
