Table of Contents

How Science Goes Wrong

Danger Levels of Science

Dangerous Science and its Crimes

1. Experimental, Weaponized Vaccines & Flu Shots
2. Agent Orange Chemical
3. DDT & DDE
4. Growth in E-cigarette Use & the Health Risks
5. Thalidomide Tragedy
6. Weapons of Mass Destruction
7. Radiation Experiments on Human
8. Forty Years of Syphilis Experimentation on Blacks
9. Human Genetic Engineering (Eugenics)
10. Genetic Pollution
11. Chemical Pesticides in Our Foods
12. Psychiatric Drugging of our Children
13. Bioterrorism Attacks & 5 Most Dangerous Military Biological Weapons
14. Nuclear & Radiation Accidents
15. Fluoride Contamination of Drinking Water
16. Runaway Drug Resistant Superbugs
18. Nanotechnology - A New Hazard
19. Autonomous Robotic Soldiers & Artificial Intelligence
20. Transhumanism & Biohacking

12 Ways to Spot Bad Science

7 Ways to Stop Dangerous & Out-of-Control Science

Precautionary Principle

How Science Goes Wrong

We know that scientific research has changed the world. But now science needs to change itself. Sometimes success breeds complacency. Modern scientists trust too much and verify too little, to the detriment of the whole humanity, and of science itself.

Scientists believe that science is self-correcting but to a very large extent, it is not. Too many of the scientific findings that flood the academic ether are direct results of poor analysis and shoddy experiments. The findings I present in this book suggest that a lot of scientific research is poorly thought through, poorly executed, or both.

Scientists themselves need to develop a value system because simply moving on from their mistakes without publicly acknowledging them severely damages, rather than protects, their reputation. I know this will not be easy, but if science is to stay on its tracks, and be worthy of the trust that is very widely invested in it, this is necessary.

Finally, in this book I show you various ways to separate science from pseudoscience, and how to stop out-of-control science.

If science is the quest for understanding and knowledge, then it is **good**. But if science is the quest for profits and power at the expense of humanity then it is definitely **dangerous**. Science must exist to serve the long-term interests of humanity, not to serve the short-term profits of corporations.

Throughout the history of human civilization some of the worst crimes ever committed against humanity have been carried out in the name of science.

Danger Levels of Science

- 1.** Physical pollution, such as dust or other relatively inert materials.
- 2.** Chemical pollution - this refers to reactive chemicals that interact with biological systems.
- 3.** Radiological Pollution - ionizing radiation that persists in the environment, such as cesium-137.
- 4.** Self-replicating pollution, such as GMOs that can never be entirely cleaned up. The same may be true with self-replicating nanotechnology and bioweapons.
- 5.** Artificial intelligence (A.I). No strict safety testing and controls. A.I may gain awareness and decide human beings are a threat to the future of life in the universe.

Dangerous Science and its Crimes

The following are some of the crimes committed by dangerous science. They could obsess you for months.

1. Experimental, Weaponized Vaccines & Flu Shots

On October 1, 2020, CNBC reported that Coronavirus vaccine trial participants reported extreme side effects. I wouldn't advise my enemy to voluntarily or mandatorily take experimental vaccines and kill shots that can cause severe neurological damage and lobotomize anyone who was stupid enough to take them.

Even the mainstream media outlets such as CNBC.com has reported that the vaccine trials conducted by Pfizer and Moderna are producing extreme side effects in trial subjects.

“High fever, body aches, headaches and exhaustion are some of the symptoms participants in Moderna and Pfizer’s coronavirus vaccine trials say they felt after receiving the shots.” [CNBC](#).

We should not be foolish enough as tax payers to allow mandatory vaccinations to be passed into the law of our land, or even be more foolish to actually get vaccinated. If we are, then, as things currently stand, anyone can be murdered at any time without any hope of justice.

Check out the case of former New York State Senator, Jose Peralta, who passed away after he complained of symptoms he attributed to a flu shot he had taken earlier. Check it out: [NationalAddictionNews.com](#).
