

STRATEGIC **BITCOIN** SAVINGS

A Practical Guide to Building Wealth with Dollar
Cost Averaging(DCA)

WRITTEN BY: **GIDEON KOMBIAN**

Why save in **Bitcoin**

You work hard for your money, and maybe you've started putting some aside. Whether in a bank, mobile money, or even cash at home. But have you ever noticed how the same amount buys you less and less over time? That's inflation quietly eating away at your savings. The money you keep today is worth less tomorrow.

Now, imagine a way to protect your savings, not just from inflation, but with the potential to grow over time. That's where Bitcoin comes in.

Unlike traditional money, Bitcoin has a fixed supply. Only 21 million will ever exist. No central bank can print more, and no government can manipulate it.

That's why more and more people see Bitcoin as a powerful way to save for the long term.

But what about Bitcoin's price going up and down all the time? That scares a lot of people from getting started. What if there was a way to gradually build your Bitcoin savings without stressing about price swings?

There is. It's called Dollar Cost Averaging (DCA), and it's one of the simplest, safest ways to start saving in Bitcoin. Let me walk you through it—step by step.

Traditional Money(Fiat) vs Bitcoin

Traditional money

- Unlimited supply
- Decreases in value(Inflation)

Bitcoin

- Limited supply(21M)
- Increases in value(Deflation)

Remember, saving in Bitcoin isn't about replacing all your traditional savings but about diversifying and preparing for a changing financial world. With the right approach, Bitcoin can be a valuable tool to help secure your financial future.
